Jim,

I agree with you in principle ... but I don't see any reason why you limit yourself to 14.4 ... amateur packet USER links should be running at 56-64kbps MINIMUM ... "backbone" links should be at T-1 rates or higher.

If you'd like to run faster speeds on packet, you really ought to consider the benfits to be had by bringing in more of the best minds of today's telecommunications industry.

The few who have been willing to jump through the code hoop are simply not enough critical mass to push ham radio into the future, despite their talent and their best intentions.

Until you have enough high-tech USERS who are willing to invest the time, money, and effort to design and build the infrastructure, you'll always find packet choking itself to death at a lousy 1200 baud.

>> carl@ais.net
>
>Carl is turning 46 this fall. His current tech license was issued last
>May.

License was MODIFIED (change of address) last May ... I've been licensed
continuously since 1975.

I also hold a commercial license. While the current piece of paper is
nominally worthless (since they re-issued all commercial licenses as
"General" a few years back) it was once a "real" commercial license.

Professionally, I've been in the mobile radio and satellite
communications industry for just over 25 years, as a design engineer,
and hold a couple of patents.

So go smoke that, "Joe Camel" ...

BTW ... what's YOUR callsign???

>You must have missed all the attempts that have been made on this newsgroup,
>in packet radio bulletins, and in QST (5/95) to explain that the equipment
>advertised as "9600 baud ready" actually isn't.

The 451a IS "9600 baud ready"...but it just doesnt do the job as well as some
other rigs.

>Also, it often seems that amateurs tend to believe such a claim in a
>commercial advertisement, and tend to disbelieve claims from their fellow
>amateurs who happen to have tried it and found it was not true.

I have never experienced this.

>This is unfortunate, and not only for their own wallet but also for the
>efficiency of packet radio as we all use it.

Actually, the money can be considered well spent by some.

One can spend $400 on a radio that can do voice, 1.2k packet, and 9.6k
packet...on ANY frequency of his choice, verses a $150 rock bound rig that
can only do one thing, on one frequency.

It really depends on the person, and how they intend to use their equipment.

>When a reasonably well documented article like the one in QST fails
>to hit the brains of the newcomers, we have a problem.

Are you slamming hams who dont get, or read QST magazine? Are you
saying that it should be some sort of requirement to read QST?

>Plainly stating
>"what Kenwood tells you is not true" is not going to make much impact,
>and I doubt any amateur is interested in going through a legal case
>against the radio manufacturers and distributors about making false
>claims in their commercial advertisements.

Very true. I cant afford such legal fees, however, if I ever bought equipment
that didnt do what the manufacturer claims, and they didnt make it right, not
only would I never buy anything from them again, I would spread the word on
them as well.

Take care.

In Carl's defense, I have a friend who was a Tech with code for 37 years.

of course, a bunch of us decided to upgrade (poor dx conditions), he
practiced 15 minutes a day right along with us

he passed 20 wpm perfect copy

i passed 13wpm 2 mistakes

some people are quite content to aspire to nothingness, to be satisfied
with sameness (status quo) and Carl has that right

However, when he and his, to use a phrase, Ilk, decide that since we've
done nothing to deserve it, therefore we must be handed it on a platter
I must protest.

Sure the code is antiquated, so is parallel parking, math without a calculator
spelling without a spell checker yada yada yada

BUT, it still required and to piss and moan about this and that yet never do a
darned thing..that gripes my cookies

The old phartz this, the ARRL that... ENUF boring boring boring

Remember this..if the US decides to go nocode HF, you still have the rest of
the ITU to contend with. I have yet to see, other than the NEW Zealand
proposal, ANY ITU country propose the removal of the code requirement

Unfortunately, the committee doesn't meet for another 3 years. 3 years of yammering about how we're gonna lose spectrum...not HF mind you, but then again, I rarely use VHF/UHF, too crowded, way to many potty mouths, jammers, radio players

You'all stay on 2meters. Leave the HF to the people who have earned the priviledge

All for me. Flames responded in the Republican manner...In otherwords, ignored

steve

>made his observations of the HF bands. They are generally correct.

Congratualtions on passing the code test. We aren't keeping track of
who's against who, nor are there any age limits in ham radio. You have
no idea what I firmly believe about the code requirement. Carl does,
on occasion, have a valid point. The only point Spew has is the one on
the top of his head. We are all under 50, which proves nothing.

Spew just parrots what he reads on here. He doesn't have a radio.
If you think Drew's evaluations of HF are correct, then you need to do
a bit of dial spinning on your radio. And you need to remember that
the 'wonderful world of ham radio' consists of a few other places than
the United States.

If you are firm enuff in your beliefs that the code requirements are
'ludicrious' (whatever that means) then I suggest you petition the
FCC to change the requirements.

Most propably there will be pressures to abandon CW requirement from South-American and African countries. They are mostly poor and want to establish a communication structure, the technology and the people to use it, quickly and cheaply. It is in the interest of those countries that as many technically oriented people as possible enter our hobby.

USA has dominance in many many things, including amateur radio hobby. This means that quite a large portion of the world follows what USA does in amateur radio service. If USA abandons CW requirement, so does the rest of the world. If USA keeps CW requirement, so do most of the other countries.

I guess it will be USA and Europe that will make the CW requirement to stay. Hope I am wrong.

Jim,

I didn't say "Kill-the-DX" ... and I didn't say "Kill-the-QSL" ...
I QSL when I have an interesting contact and a QSL is requested.

The guy was talking about DXCC ... and I didn't say kill that, either
.. though now that I think about it, "contests" DO cause a substantial
portion of the congestion, and pileups of obscenity-screaming jerks ...

However, what I was commenting on was the lamenting "it's a sad stae of
affairs when (pick your old-time "halmark" of "REAL ham radio") ...
etc.)

My point is that I'm disgusted by the total unwillingness to accept ANY
change that's exhibited by SO MANY hams ... it's indicative of the
most insidious, destructive underlying problem of the ham community ...
a staunch, rigid, inflexible desire to maintain the status quo at all
costs ...

That's all I said ...

You guys are really wasting your time here. After all the discussion he still doesn't get it. It's unfortunate but this attitude reflects that of a significant number of hams - "I bought it so it must be good and since I have it now it's good enough. I don't care how it affects others". It's that attitude that keeps amateur radio stuck in the stone age. It's what makes 1200 baud packet run at 30 cps and 9600 baud packet at 120cps. It's the same attitude that keeps us from proliferating new standards at higher bit rates. But.... he's happy with what he's doing (I think) so let it rest. Just don't put a packet station on the same frequency he's on!

More people die in hospitals, on a per capita basis, than in any other sort of building.

More people die in automobile accidents within 25 miles of home than outside of that 25 mile radius.

Like anything else, there is a rational explanation, and a statistical one. The lack of a relationship between cause and effect, and statistical significance is what makes politicians out of liars, or is it the other way around?

I first had the call G1UQW in the mid 1980s, but have been an SWL
since 1971, when I was a boy of 10. I joined the RSGB first time
round in 1975, as an SWL at a time when SWLs seemed to be treated as
second class citizens. However, I stayed in the RSGB until1981, let
my membership lapse as a student, rejoined when I got my first
license. I've written two books on amateur radio, taught on my local
RAE course on an occasional basis and written God knows how many
articles for the hobby press. I reckon I've been aroudn enough to
know enough.

> Over the 25 years that I have been a member I must say that things have
> changed (for the better).
> A great deal of work has been put in to extending many of the licensing

> I think if you had have been round many years ago that you would
> understand what I mean.

I woudl agree, but organisations have to change and develop;however,
I've supported the RSGB for a number of years and feel that I can
make a judgement o what they do now, rather tahn their past
successes. The RSGB must be perceived as being a more modern, open,
organisation.

> BTW. I don't mean the RSGB is squeaky clean, they may well have to revise
> certain things in the future to maintain membership.

Yes, they will.

And changing from within doesn't seem to be happening; maybe a little
organised outside pressure will do the trick. I want a national
organisation to work; I want to belong to a group that would be able
to represent my views as a radio hobbyist to teh pwoers that be. Who
does it I don't really care. Getting involved in the RSGB 'politics'
is difficult for those of us who run a business; also, given the
attitude of a number of senior members (i.e. members who have been in
the RSGB for a number of years) to G0s, G1s and later calls
(i.e., because we passed the multiple choice we're deemed unworthy)
I'm not sure I want to put myself through it...

I don't normally criticise posts...but if this person is *really*
studying for a BA in anything, let alone media studies, perhaps he or
she should learn to spell, punctuate and write a grammatical sentence!

>KE6OCM

Hi Abe, I spent my first 13 years in Burbank (1031 Delaware Road,
just below the DeBell golf course). The way the Verdugo Mountains
wrap around the city will surely cause V/UHF to be blocked from
N to E. But you've got a straight shot to any rptr in the Hollywood
hills; and if you're in the Verdugo foothills you should have enough
elevation to hit the Catalina Island rptr (used to be WR6AAA
back in the late 70s).

Where are you at in the city?

Jeff KH2PZ

WANT TO MAKE FAST EASY CASH??? THAN READ ON

(FOR BETTER VIEWING WIDEIN YOUR E-MAIL SCREEN)

ATTENTION ALL FAST MONEY MAKING SKEPTICS!
PLEASE READ AND ANALYZE THE FOLLOWING AND DETERMINE IF
$10 IS WORTH KNOWING IF THIS IS REALLY POSSIBLE!!!!!

INSTRUCTIONS

Follow these instructions EXACTLY, and in 20 to 60 days you will have
received well over $2,000.00 cash, all yours. This program has remained
successful because of the HONESTY and INTEGRETY of the participants. Please
continue its success by carefully ADHERING TO THE INSTRUCTIONS.

Welcome to the world of Mail Order! This little business is a little
different than most mail order houses. Your product is not solid and
tangible, but rather a service. You are in the business of developing Mailing
lists. Many large corporations are happy to pay big bucks for quality lists.
(The money made from the mailing lists are secondary to the income which is
made from people like yourself requesting that they be included in that
list.)

1) IMMEDIATELY mail $5.00 to the first 2 people on the list below
Send CASH only please (total investment $10.00). Enclose a note with each
letter stating: "Please add my name to your mailing list."
(This is a legitimate service that you are requesting and you are
paying $5.00 for this service).

2) REMOVE the name that appears number 1 on the list. Move the other 3
names up one position. (Number 2 will become number 1 and number 3 will
become number 2, etc.)

Place your name, address and zip code in the number 4 position.

3) Upload The File To your MAIL BOX ON AMERICA ON LINE and Forward It
to 50 Or More People. (This Works Really good if your not into BBSes)
To upload the file to your mailbox. While your signed on to America
Online, go to "compose mail" and put your screen name in the place where
it says "to:" (people to send to) and attach the file to the lettter.
And send the file to your self and forward it to as many people as you can.

4) Within 60 days you will receive over $2,000.00 in CASH. Keep a
copy of this file for yourself so that you can use it again and again
whenever you need money. As soon as you mail out these letters you
are automatically in the mail order business and people are sending
you $5.00 to be placed on your mailing list. This list can than be

rented to a list broker that can be found in the Yellow Pages for additional income on a regular basis. The list will become more valuable as it grows in size. This is a service. This is perfectly legal. If you have any doubts, refer to Title 18, Sec. 1302 & 1341 of the postal lottery laws.

NOTE: Make sure you retain EVERY Name and Address sent to you, either on computer or hard copy, but do not discard the names and notes they send you. This is PROOF that you are truely providing a service and should the IRS or some other Government Agency question you, you can provide them with this proof!

Remember as each post is downloaded and the instructions carefully followed, 2 members will be reimbursed for their participation as a List Developer with five dollars each. Your name will move up the list geometrically so that when your name reaches the number two position.
You will be receiving thousands of dollars in cash.

1) BRIAN DONNER
P.O. BOX 258
LINCOLNVILLE, ME 04849

2) DAVE GARCIA

3) SEAN BUGEL
319 ELIZABETH AVENUE
CRANFORD, NJ 07016

4) EDWARD DAVIDOSKI
67 HILLSIDE ROAD
ELIZABETH, NJ 07208

The following letters were written by participating members in this program.

To Whom It May Concern:

To start, I thought this file was a big host. And another thing that kept me skeptical to begin with is that it sounded very illegal. But I looked around a few local BBS's and found that this was going on everywhere. I decided to take part in this fast-money making process. So I did, and to this date have received more than $4,500 in cash in less than three months. I only have one thing to say for those out there in disbelief... it works.

About six months ago I received the enclosed post in letter form. I ignored it. I received about five more of the same letter within the next two weeks. I ignored them also. Of course, I was tempted to follow through and dreamed of making thousands, but I was convinced it was just another gimmick and could not possibly work. I was wrong! About three weeks later I saw this same letter posted on a local bulletin board in Montreal. I liked the idea of giving it a try with my computer. I didn't expect much because I figured, if

other people were as skeptical as I, they wouldn't be too quick to part with ten Dollars. But, I buy lottery tickets weekly in my province and have nothing to show for it but ticket stubs. This week I decided to look at this as my weekly lottery purchase. I addressed the envelopes and mailed out the money in each as directed. Two weeks went by and I didn't recieve anything in the mail. The fourth week rolled around and I couldn't believe what happened! I can't say I received $20,000, but it was definitely well over $4,000! For the first time in ten years, I got out of debt. It was great. Of course, it didn't take me long to go through my earnings so I am using this excellent money opportunity once again. Follow the instructions and get ready to enjoy.

Good Luck,
Charles Kust
St Agathe Que.

To all disbelievers,
At first I took this letter as a scam, for people that just wanted to to make a quick buck off of me. But then I decided to give it a try. Any way, it was only 10 dollars we were talking about. I sent out the 10 dollars the next day. I didnt think it would work, because after all it had been two weeks and I had recieved nothing in the mail. But then I started to recieve a lot of mail from all over America. California, Michigan, Oreogon, Minnesotta, Ohio, and New York. I couldn't believe this. I ran in my house as soon as I could and opened it all. That day I recieved over 200 dollars. This continued for about 4 more weeks! At the end I recived about 35,000 dollars. I was so happy! I could probably have recieved 45,000 if I would have sent this to more people. That was my mistake. So I did it over agian. This time making sure I got this out to everyone I could. Within 6 weeks I had now recived 44,000 dollars. Now I will use this tacktick for whenever I need money again. You would be suprised how great this works. If you do decide to do this remeber follow " ALL OF THE INSTRUCTIONS AND DONT MISS A STEP." Otherwise this will not work. This is a great program if you want it to be.

Best Wishes,
Grant H. Jones

Asian women. I find them so much easier to get along with than American women.

>What Radio stations do you listen to?

Well, let's see. The last stations I listened to were KH6AFS, DL4JAN, SP0CUW, N6FU, and K7JYE.

>Do you listen to Pirate radio?

Unfortunatly, yes. But we don't call them pirates. We call them bootleggers, or slims. We have to listen to Chinese, Indonesian, and Philippino slims every day. Some countries just don't enforce the rules.

>Music choice. What are your choices in music that determine your radio choice?

None. We aren't allowed to play music on the radio. Against the rules.

>Why do you listen to those radio stations.
>Is it the Dj's; the general patter. Or what.

Because they called me. First, I call CQ, then they call me. Sometimes they call CQ, and I call them. But it doesn't do much good to talk on the radio if you aren't going to listen.

>Date of where you collected the information.

Yesterday.

>Are you a student at all

No. I have my extra class license, so I don't have to study anymore.

Carl,

I also question as to whether or not the code makes sense - and also have the 20 WPM down and out of the way. A couple of friends LOVE to work that mode, and others avoid it like the plague... but rather than judging on what we call our form of enjoyment, aren't we looking for methods to locate and invite those who will help fulfill the HAM radio charter. What I have not yet seen in the discussions is an idea to allow the code as ONE of the ways to get the expanded privledges, with a technical route being the other. Any thoughts on making the passing of either the Commerical General Class test, or something of similiar difficulity an alternative to the code. This would allow the current routes to Extra to still exist, yet not keep the technical types out just because they don't want to "pound brass". Thoughts?

>the other, depending on the timeframe under which each was conducted.

The two surveys are dated 6 months apart, with the ARRL member survey being the later one. I thought the contrast was interesting, but it doesn't necessarily say much about the technical competence of the two groups. After all, AOL has removed the necessity for many of us to buy diskettes thanks to their incessant mailings, so getting connected to the net isn't an indication of great technical accomplishment. It is a significant deviation between the general amateur population and that subset who are ARRL members, however.

I *suspect* it indicates that the ARRL membership has a larger percentage who don't own computers than the general amateur population. This may be because the ARRL membership is older than the general amateur population. While age alone isn't an indicator of technological obsolesence of skills, and I'm sure we all know examples of elderly people who are on top of the latest technics, it is true in general that the elderly are more set in their ways and less quick to adopt new ideas and new techniques than younger people, IE they've lost the sense of wonder and adventure that most younger people have. (Some young people seem born without it, and are "old" while still children, and some old people never lose it, but there is a difference in general between the groups according to age.)

I've even seen that here with some of the older (or at least older in spirit) members of our groups bemoaning the passing of the slide

rule for the electronic calculator, or the taking of square roots with only pencil and paper. Younger people have grown up with the calculator, and increasingly with the computer. It is a simple basic tool to them. To some older people, it is a mystery which they don't quite understand or trust.

To amateurs of whatever age who have retained a zest for learning, and an adventuresome spirit, new technics are their lifeblood. They can no more resist trying the latest thing than they can resist breathing. Those who have lost, or never had, that zest and spirit, probably can't understand this.

>So what's that got to do with anything ? Excuse me if I sound crabby,
>I just woke up - with a keyboard in my face....

No problem, Jim. The point is that the 54% number is distorted by
people like me who rarely use Morse, but who had to answer yes to
the survey question about Morse (yes, I was one of the ones surveyed).
In other words, using that 54% survey number to show that 54% of HF
activity is in CW is totally bogus. That should also be obvious
because the total for all modes is larger than 100%.

If the survey reflected *usage* statistics, the total for all modes
would be exactly 100%. It isn't even close. The only real conclusion
we can draw from this data is that only 54% of amateurs *ever* use
Morse on the air for *anything*, even repeater IDs. And of course that
means 46% of amateurs *never* use Morse, except *once* to pass a test.
That's all we can say from this data. We can't draw any meaningful
usage statistics from it. We can get a bit of usage data from the
fact that the total for all modes *except* Morse also totals over 100%.
That would indicate that there are relatively few stations which use
Morse exclusively, and obviously, while they aren't using Morse, they
aren't contributing to Morse occupancy of amateur frequencies.

One could be tempted to argue that a test element on something nearly
half of tested amateurs never use shouldn't carry much weight on the
exam. But this isn't a valid argument. Test elements aren't supposed
to be about popularity. They are supposed to satisfy some legitimate
government concern. That concern used to be so that life safety services
with only Morse capability could warn off amateurs who were causing them
interference. With the cessation of Morse usage by the life safety
services, that concern has become moot. That leaves as the only rationale

for continued Morse testing its use as a "rite of passage". But that isn't a legitimate government concern. Government's purposes do not include running fraternity initiations.

2375. Help: Yaesu FT-51R memory clearing

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-04 00:00:00 UTC
From: lwh@orian.mc.duke.edu
Message-ID: <lwh-0409961224270001@152.3.50.42>
Source record: 217473

How do you clear individual memory channels in Yaesu FT-51R ? Manual
describes how to
remove memory channel names but not memory channel itself. TNX

2376. Re: ARRL "Representation" on code and other issues

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-04 00:00:00 UTC
From: cjs9@cornell.edu
Message-ID: <50kas5$i29@newsstand.cit.cornell.edu>
Source record: 217474

In article <50cqje$ffe@news.ais.net>, carl@ais.net says...

>What would be so onerous about requiring hams to return a card in a
>postage-paid return envelope, checking the box and indicating that they
>were, in fact, still alive and cared enough to reply??????
>
>As I said, it would allow the FCC to reclaim a LOT of SK callsigns,
>which they could re-issue for a fee under the new vanity call program,
>raising revenue that they might even apply to better enforcement
>programs.

any extra fees collected would go towards paying for your truly foolish
idea. You obivously have no concept of what such a survey would cost. The
vanity callsign fees would only cover a small portion of the cost of a
"complete" survey.

You would fair much better running for one of the ARRL offices, then you
would be in on the decision making process you claim that the ARRL has sole
posession of.

I myself do not favor a continuation of a code requirement, nor am I a
member of the ARRL. However I do believe that they have a much better Idea
of what is desired than any individual Ham. That the FCC chooses to listen
to them is, believe it or not, a good thing. They (the FCC) could be more
like the rest of our government and just do as they damn well please.

If it weren't for the ARRL pushing the codless tech license I would most
likely not be a Ham. I am glad they did and hope they keep pushing on our
behalf.
>
>It would ALSO let the FCC get a clear unbiased view of the REAL opinions
>of the US ham population, instead of the slanted, backward trash that
>the ARRL feeds them.

What makes you think that the powers that be at the FCC will really do what
we want if they have thrie own reasons contrary? If it doesn't work for the
ARRL then there is no reason to feel any different about the FCC.

>Remember this..if the US decides to go nocode HF, you still have the rest of
>the ITU to contend with. I have yet to see, other than the NEW Zealand
>proposal, ANY ITU country propose the removal of the code requirement

Hi Steve,
Japan's 4th Class license is an HF no-code certificate; they're limited
to 20W output, no WARC band privileges.

I don't like the fact that the JA government created such a permit, but
it is the exception. But we've actually got something a little similar: 11M.
No code necessary, and limited power in that slice of HF.

No doubt they do. But unlike in the amateur service where one must
submit oneself to an examination in order to confirm if the Pavlovian
conditioning attributed to learning Morse code has indeed been
successful, a helicopter pilot need not prove that he/she does not have
to prove that they have the skills to climb a mountain to reach the top
before they are allowed to do so in their conveyance of choice.

2382. US License Examination Opportunities Scheduled 9/4/96 to 12/9/96

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-04 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <322DD50A.4701@arrl.org>
Source record: 217480

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/~hamradio/callsign.html

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is often busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee

if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following
exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license
or a copy which was issued on or before 3/21/87 is acceptable by VEs.
VECs may be able to allow such credit based upon an original CSCE
issued on before that date which shows Element 3 credit for passing
the (then) 50 question Technician/General written test. If such
documentation has been destroyed, the FCC will itself issue the
necessary verification. To obtain such verification, acceptable
by all VE Teams and VECs, write to FCC and request a "Letter of
Verification of Technician License Held Prior To March 21, 1987".
Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd,
Gettysburg PA 17325-7245. If you include reference to a fax number
in your reply, the FCC will fax your verification letter to you.
Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion
of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or
1C credit qualifies the holder for Technician Plus HF privileges.
The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit
for the element(s) shown as passed. A Physician's Certification
on a Form 610 is acceptable by a VE Team for 365 days after the
Physician's signature date. Once accepted by the VE Team,
assuming the applicant qualifies for a General or Advanced license,
a CSCE is issued showing Element 1C (or "Physician's Cert. and
Release: 1C") credit is valid for 365 days toward an Extra class
license.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT

PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

2383. Re: Burbank, CA a "dead" zone for VHF?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-04 00:00:00 UTC
From: bb840@scn.org
Message-ID: <Dx81Gz.E7r@scn.org>
Source record: 217481

In a previous article, ag001@lafn.org (Abraham Stavsky) says:

>
>Several friends as well as myself have had trouble working
>VHF and even UHF in parts of Burbank, with repeaters being quite
>difficult to hit even when fairly close by. Is there anything
>about Burbank's geography which could affect radio transmission?
>Much obliged.
>KE6OCM
>--
>
Yes, it's at the east edge of the San Fernando Valley. Santa Monica
mountains are directly south and San Gabriel mountains directly east.
Much of Burbank is in a fringe area for television, because the San
Gabriel mountains block the signal from Mount Wilson.

Drew,

You know for someone who's a ham and supposed to fostering goodwill
among amateurs worldwide you're doing a lousy job.

I'm not yet an "OLDE FAHRT" at 31 but I do have an extra class license
and support keeping the code requirement for HF access.

So there!

HUH???? What???? that is one of the weirdest comparisons I have yet to see.

helicopter pilots put alot of time and practice into attaining their licenses (certifications).
a better comparison would be allowing airplane pilots to get their licenses without ever having to learn IFR.
Why should they, they only fly when the sun is out, IFR is passe, I never use it or need it.

mountain climbers do so by choice and they practice their skills to achieve a level of competency, unlike the whinny crybaby give HF cause i want it types.

tell you what....I'll arrange to give you all HF privledges without practicing or taking any code if you'll climb Mt. McKinley without ever having climbed before.

In fact, I'll make sure you get your new codeless HF license on the way down (SPLAT)

Hello OM/YL

I'm searching the manuel or service manuel for the icom 970.
Also modifications from this transceiver.
Contribution is not a problem.

If you have also mods for the frg 7700 let me know.
Thanks a lot, 73's de on1dan

2387. Ventura County ARES RACES Area 6 Online Packet Radio Training Course

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-04 00:00:00 UTC
From: "Don L. Miller" <dlmiller@fishnet.net>
Message-ID: <322DFD1D.7481@fishnet.net>
Source record: 217485

We, the Ventura County ARES Area 6 Packet Radio Training Group have created a download-able version of our manual on the World Wide Web.

We hope you enjoy the manual as much as we have enjoyed putting it together, and please feel free to pass it along to all interested in packet radio. It is our intention to make this material available to anyone who desires to have it. You may freely make copies and distribute
it, hold classes using it, modify it and train from it, etc.

We are giving this freely to the ham community to promote the free exchange of information and fellowship among hams. We hope you also see fit to pass it on in the same spirit. You will find it at:

http://www.fishnet.net/~dlmiller/packet.html

This is an HTML version of the hard copy reference manual which we use in
our Packet Radio Training Course.

For questions and/or comments about this web page or the class which we teach, please send a message to one of the following:

In article <50inqr$945@cu.comp-unltd.com>, @cu.comp-unltd.com says...
> I am not a ham radio operator, but I am interested in the possibility
> of using a HAM radio in conjunction with a computer to gain remote
> internet access. I have talked with a HAM operator and he told me
> that it is possible to communicate with a computer and a radio using a
> "node" and a software program called "packet". From the other things
> we talked about it seemed like it should be possible to set up a node
> on an internet server computer and link it to a node on a remote PC.
>
> Is this possible?

Sure is!

> Is anyone curently doing it?

A lot of people- there are many Internet <--> Packet gateways. Try going to
http://www.ampr.org/ to find out more.

> If so, how fast is it (baud rate) and how much does the service cost?

If you are connected through a packet modem, the speed is determined by how
fast your packet modem is. If it's 300 baud, then everything will crawl along,
even if the gateway is connected to a T1.

> How far can it be reliably used on a daily basis (how many miles)?

Using an antenna, you can get as far as the antenna is good for. I doubt
you'd be able to access a packet --> internet gateway in southern california
from southern florida, especially on 2 meters. :) However, if you are going
backwards (internet --> packet), it all depends on which stations the packet
station are connected to is hooked up with.

Good Luck,
Kevin Lo

> to be an uncouth, unworthy, lazy, etc., no-code Tech.

I would say that at least 50% of the "I want to eliminate the code"
types that I've met fit into this category.

Stereotypes do have a basis in fact. That's how they get created.

> created. My guess is that the unwillingness of YE OLDE FAHRTZ and their
> cronies in the ARRL to support a no-code license had quite a bit to do
> with this.

Yeah. You're absolutely right Drew. I guess we need to create a no-code
VHF license to protect our bands...

Oops, wait. Forgot. We did that 5 years ago, and the commercial
interests are still around wanting our VHF frequencies. Guess that
codeless VHF license didn't work after all.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z SEPTEMBER 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 04 SEPTEMBER AND FORECAST FOR 05 SEPTEMBER - 07 SEPTEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 03 Sep
Daily Proton Fluence >1 MeV: 5.3E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 8.3E+08 (high)
X-ray background: A4.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 Sep 06 Sep 07 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 Sep: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Mostly quiet with one unsettled
period between 1500 and 1800UT.

Estimated Indices : A K Observed A Index 03 Sep
Learmonth 7 2212 2322
Fredericksburg 3 3
Planetary 4 4

Observed Kp for 03 Sep: 1212 1112

2B. MAGNETIC FORECAST
Date Ap Conditions
05 Sep 5 Quiet
06 Sep 5 Quiet
07 Sep 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.1, 14 June 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
Baycom support - ye gads!

Corrections/Updates:
Included SLIP support in kernel config - oops.
2.0.0 kernel and ax25-tools update.
Updated net-tools to 1.32-alpha version.
Removed Jonathons `special' net-tools.
A bit of shuffling about to make more sense.
Updated the example configurations.
A minor copyright ooops.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that
relate to Linux networking in more general ways and I strongly
```

recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>

the IPX-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/IPX-HOWTO.html>

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code and utilities. DAMA support was developed by Joerg, DL1BKE. Finally Baycom support was added by Thomas Sailer, <sailer@ife.ee.ethz.ch>.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 1.3.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 1.3.xx kernel source.

These are three reasons I'm recommending you use the alpha version software even though most everyone else will recommend you don't use it:

- it makes the process of building and configuring the software a whole lot simpler. There are no patches to apply it is a simple matter of configuring and compiling a kernel with the appropriate options enabled.

- it is the most recent software and is most likely to provide the most satisfactory results.

- like all new software, it needs testing and bug reports. The more people that take the software and attempt to use it in their own configurations the more likely it will be that bugs are uncovered and the easier it will be to get the software debugged. Join the team, contribute bug reports and help everybody.

Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter. Please take all the usual precautions and be sure to keep a working kernel as backup when testing new kernels. It is wise to test a new kernel by booting from it from floppy before actually installing it with lilo, though I haven't bothered for about 90 kernels revisions so I'm fairly confident you can pretty safely run with alpha kernels.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/NetTools/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

The AX.25 utility programs can be found at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.0.0.tar.gz

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-2.0.0.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# gzip -dc linux-2.0.0.tar.gz | tar xvofp -
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y
IP: forwarding/gatewaying (CONFIG_IP_FORWARD) [N/y/?]
IP: firewalling (CONFIG_IP_FIREWALL) [N/y/?] (NEW)
IP: tunneling (CONFIG_NET_IPIP) [N/y/m/?] (NEW)
Amateur Radio AX.25 Level 2 (CONFIG_AX25) [N/y/?] Y
AX.25 over Ethernet (CONFIG_BPQETHER) [N/y/?] (NEW)
Amateur Radio NET/ROM (CONFIG_NETROM) [N/y/?] (NEW)
Kernel/User network link driver(ALPHA) (CONFIG_NETLINK) [N/y/?]
Network device support (CONFIG_NETDEVICES) [Y/n/?] Y
SLIP (serial line) support (CONFIG_SLIP) [N/y/m/?] Y
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]
Z8530 SCC kiss emulation driver for AX.25 (CONFIG_SCC) [N/y/m/?]
Other ISA cards (CONFIG_NET_ISA) [N/y/?]
Ottawa PI and PI/2 support (CONFIG_PI) [N/y/?] (NEW)
Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

After you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.
5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration questions, similar to the kernel configuration questions. Be sure to include support for all of the protocols and network devices types that you intend to use. If you do not know how to answer a particular question then answer `Y'.

The tools compiled cleanly against a 2.0.0 kernel without error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the latest firewall administration tool ipfwadm. This tool replaces the older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you need to compile the user programs. To compile and install the user programs you should use a series of commands similar to the following:

```
# cd /usr/local
# gzip -dc ax25-utils-2.0.0.tar.gz | tar xvvof -
# cd ax25-utils-2.0
# make install
```

The files will be installed under the /usr/local directory by default
in subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should read the README.ncurses file in the top level
directory. You can do as Jonathon suggests, or you can try replacing:

```
#include <curses.h>
```

with:

```
#include <ncurses/curses.h>
```

in the:

```
call/call.c
call/menu.c
```

files.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure
it to work as a `vanilla' AX.25 interface with no TCP/IP. The
following configuration will get you to the point of being able to
make AX.25 calls from your Linux machine to other AX.25 nodes.

The AX.25 software has been designed to work with a TNC in kiss mode
or with other cards such as the Ottawa PI2 card, PacketTwin and other
SCC cards via special drivers that emulate a kiss tnc.

For real KISS TNC's there are two steps to complete in order to create
an AX.25 port ready to use to make outgoing calls. For other types of
hardware you need only complete the first step.

6.1. Creating the /usr/local/etc/axports file.

The AX.25 ports have a configuration file that is read by many
programs that want to find information about an AX.25 port. This file
is called the:

/usr/local/etc/axports

file. The format of the file is as follows:

```
portname callsign baudrate paclen window description
```

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-0 4800 256 2 144.800 MHz

6.2. Creating the AX.25 device

If you are using an SCC card like the PI2 or PacketTwin then you do
not need to create the network device, as the kernel driver will
automatically do this for you. If you are using a KISS TNC then you
will need to create the AX.25 interface as it will not already exist.
Creating an AX.25 port is very similar to creating a slip device.

You will need to have the TNC preconfigured and connected to your
serial port. You can use a communications program like minicom or
seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the
slattach program (refer to the NET-2-HOWTO for more information on
slattach and the other network software for Linux). For example:

/usr/local/sbin/axattach /dev/ttyS0 radio

would configure your /dev/ttyS1 serial device to be a kiss interface
configured as per the details for the line beginning with the portname
"radio" in the /usr/local/etc/axports file.

All this step has done is to actually activate the device in the
kernel, you need to run other programs before you an actually make use
of the port.

6.2.1. Setting the callsign for SCC cards.

If you are using a PI or PacketTwin card then you should use the
axparms -setcall command to change the callsign of the appropriate
port to that which you intend to use. Refer to the PI/PacketTwin

section for the names of the network devices to use.

6.2.2. Testing the interface.

You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use the call program as demonstrated:

/usr/local/bin/call radio VK2DAY via VK2SUT

Note: you must tell call which AX.25 port you wish to make the call on, as the same AX.25 node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man pages in /usr/local/man and the README file in ax25-utils-2.0.0 distribution for more information.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. Jonathon has modified the axattach command so that you can include the IP address that you want the interface to be configured with on the command line. For example, to modify the example presented earlier, I could use the command:

```
# /usr/local/sbin/axattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

to create the AX.25 interface with an IP address of 44.136.8.6 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

You do not need to do it this way, you can of course just use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two files.

8.1. Configuring /usr/local/etc/nrports

The first is the /usr/local/etc/nrports file. This file describes the NetRom port in much the same way as the /usr/local/etc/axports file describes the AX.25 ports.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.
alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

```
netrom VK2KTJ-1 LINUX 235 Linux Switch Port
```

Note that the ports are referred to by name by programs such as call.

8.2. Configuring /usr/local/etc/nrbroadcast

The second file is the /usr/local/etc/nrbroadcast file.

This file is formatted as follows:

```
axport min_obs def_qual worst_qual verbose
```

Where:

axport
is the port name obtained from the /usr/local/etc/axports file.
If you do not have an entry in /usr/local/etc/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 10 1

8.3. Creating the NetRom device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /usr/local/etc/nrports
file.

8.4. Starting the NetRom daemon

The NetRom daemon manages the NetRom routing tables and generates the
NetRom routing broadcasts. You start NetRom with the command:

/usr/local/sbin/netromd

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/local/sbin/netromd command in your rc files
so that it is started automatically each time you reboot.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to
configuring an AX.25 interface for tcp/ip.

Again you can either specify the ip address and mtu on the nrattach
command line, or use the ifconfig and route commands, but you need to
manually add arp entries for hosts you wish to route to because there
is no mechanism available for your machine to learn what NetRom
address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5 and an
mtu of 512 and configured with the details from the

/usr/local/etc/nrports file for a NetRom port named netrom you would use:

```
# /usr/local/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-1
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card, and executed configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

To configure the BPQ support you need to associate an AX.25 callsign with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 vk2ktj-9
```

This says that AX.25 callsign vk2ktj-9 is associated with the eth0 device.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1
```

```
LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card with an AX.25 address and for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /usr/local/sbin/axparms -setcall pi0a VK2KTJ-2
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

Note also the use of the axparms -setcall command to set the AX.25 callsign of the port.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

The kernel driver is included in the standard kernel distribution, but there are a suite of configuration tools that you will need to obtain as well.

To compile the kernel support you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

You can obtain the configuration tools package from:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/z8530drv-2.0.dl1bke.real.tar.gz

The following command were what I used to compile and install the package for kernel version 1.3.93:

```
# cd /usr/src
# gzip -dc z8530drv-2.0.dl1bke.real.tar.gz | tar xvpofz -
# cd z8530drv
# rm gencfg sccinit sccstat
# make dep
# make utils
# make install
```

Note: I've not followed the instructions included because the version of driver in the 2.0.0 kernel is actually newer than that included in the package and the normal installation process would have overwritten

the new kernel source with the older version.

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.rc. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

sccinit

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number

e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280. The argument is a character string with allowed values of `yes' or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector latch (also known as "intack port") for PA0HZP cards. There can be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the special function register on several cards. The default is 0.

```
option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card
```

```
chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.rc file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:
attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.

The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. Configuring an interface for a Baycom modem.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced Par97 parallel port modems.

When the driver is running it follows the standard of looking like a KISS interface, so you treat it in much the same way as you would the PI card, PacketTwin or SCC driver ports.

13.1. Compiling the kernel

The driver is only available as a module, so you must have compiled module support into your kernel, and also selected the appopriate options to support the Baycom driver during the make config stage when compiling your kernel.

The relevant options that you must answer `Y' for are:

Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]

13.2. Creating the /dev device files.

The Baycom driver uses special device files in the /dev directory.
You need to create these manually. The following commands should work
ok for you:

mknod /dev/bc0 c 60 0
mknod /dev/bc1 c 60 1
mknod /dev/bc2 c 60 2
mknod /dev/bc3 c 60 3

You will use these later.

13.3. Loading the module.

When the kernel compilation is complete and you have installed the
module baycom.o wherever you normally keep your modules
(conventionally they are stored in /lib/modules/2.0.0/), you must
start the module. The module takes configuration paramters from the
insmod command line, so you must start it manually from an rc file or
if you use the kerneld program you must configure it with the relevant
paramters so that it supplies them when it loads the module.

If you use kerneld you will need to add the following line to your
/etc/conf.modules file:

alias char-major-60 baycom

There are four main items to specify when loading the module, they
are:

modem
the baycom modem type you are configuring it for.

1. Ser12 type modem.

2. Par96 or Par97 type modem.

iobase
the i/o address of the serial or parallel port you will use.

0x3f8
COM1:

0x2f8
COM2:

0x378
LPT1:

0x278
LPT2:

irq
the Interrupt Request (IRQ) line your port will use.

4 COM1:

3 COM2:

7 LPT1:

5 LPT2:

options
some baycom specific options.

0 use hardware generated DCD signal.

1 use software DCD signal.

13.4. A small trap to be aware of.

Because the Baycom driver uses the serial and parallel ports of your machines, and because it is a low level driver for these, it competes with the existing serial and parallel drivers in the kernel. There are some ways of working around this problem. The first way is to make sure that you load the Baycom module first so that it takes the hardware it needs before the serial or parallel device driver modules load and search for their own. With the serial driver you have the luxury of being able to disable it for a single port using the setserial command, this will be demonstrated in the examples. If you are using the parallel port modems then beware of the lp.o Line Printer and plip.o Parallel Line IP modules.

13.5. Some example configurations.

These examples are for the two most common configurations.

Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

The first device created is /dev/bc0, the second is /dev/bc1 etc.

13.6. Configuring multiple devices.

Using the insmod program and its command line arguments you can only configure one Baycom modem. There is a setbaycom utility which I have not yet located that will allow you to configure others. If you happen to find it please let me know where it is kept so that I can include details for it here.

13.7. Actually using the devices.

This device driver when loaded looks like a serial tty driver with a KISS TNC attached. This means that configuration of the AX.25 software for this driver is identical to the configuration for a KISS TNC presented earlier. You need to use the axattach program and add the port to your /usr/local/etc/axports file. The only difference is that you would use the device /dev/bc0 instead of /dev/ttyS0.

14. Configuring ax25d to accept incoming AX.25/Netrom connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 or NetRom connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the HAM-HOWTO there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

14.1. Creating the /usr/local/etc/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 and NetRom connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<interface_call>
is the AX.25 callsign of the AX.25 or NetRom interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular
configuration applies to. If you don't specify an SSID here then
any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this
configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another
incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software
will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur
before the connection is closed.

<mode>
provides a mechanism for determining certain types of general
permissions. The modes are enabled or disabled by setting or
resetting bits in an 8 bit map. You set that map by setting
<mode> to the sum of the following values:

1 Setup utmp, and run on a ptty (planned).

2 UNUSED.

4 UNUSED.

8 UNUSED.

16 UNUSED.

32 UNUSED.

64 Disallow digipeated uplinks, only allow direct connections.

128
Lockout, Barred, immediate disconnect.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it is run. You pass useful information into these arguments by use of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in uppercase.

%u AX.25 callsign of the connected party without the SSID, in lowercase.

%S AX.25 callsign of the connected party with the SSID, in uppercase.

%s AX.25 callsign of the connected party with the SSID, in lowercase.

You need one section in the above format for each AX.25 or NetRom interface you want to accept incoming AX.25 or NetRom connections on.

There are two special lines in the paragraph, one starts with the string `defaults' and other starts with the string `default' (yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a catch-all, so that any incoming connection on the <interface_call> interface that doesn't have a specific rule will match the `default' rule. If you don't have a `default' rule, then any connections not matching any specific rule will be disconnected immediately without notice.

The `defaults' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `default' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any. The trap is that the these defaults apply only to those rules below the `default' line not to those above. You may have more than one `default' rule per interface definition, and in this way you may create groups of default configurations.

14.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-1]
NOCALL * * * * * 0 guest /usr/games/fortune
defaults 1 10 * * * 0 root /usr/local/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj
#
```

This example says that anybody connecting to the interface on my machine with the callsign VK2KTJ-1 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/local/sbin/axspawn program for them. Any copies of /usr/local/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection (assuming VK2KTJ-1 to be an AX.25 interface) and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

If you wanted to define rules for another interface, a NetRom interface for example, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package that you should look at if you need more information.

14.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/local/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

14.4. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be log in to your machine. It is invoked from the ax25d program as described above. To allow a user to log in to your machine you should add a line similar to the following into your /usr/local/etc/ax25d.conf file:

default * * * * * 1 root /usr/local/sbin/axspawn axspawn %u

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will

have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if there is anything in the password field the user is prompted to enter a password. If there is not an existing account in the /etc/passwd file then axspawn may be configured to automatically create one.

14.4.1. Creating the /usr/local/etc/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the /usr/local/etc/axspawn.conf file. This file is formatted as follows:

```
# /usr/local/etc/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

```
create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.
```

```
guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
```

create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v2.0, 30 April 1996

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
ObjectProDSP
LBBS - maybe.
Mike Westfall's ttylinkd
Craig Small's ttylinkd
predict, uo11, dove, kepgen - thanks John!
Corrections/Updates:
Copyright changed to GNU GPL version 2.0

Removed the Hints/Tricks section and made it the AX25-HOWTO
Removed the SCC, PI, PacketTwin and moved them to AX25-HOWTO
Updated svgaftt - thanks Andrew!
A small fixlet for TNOS on ftp.ucsd.edu
Updated chipmunk home site - thanks John!
Updated TNT to DPTNT

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor,

G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with
X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is
useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written
in 'C' language on a UNIX workstation. It provides two different
live displays, for single or multiple satellites, and two
different orbit prediction facilities. Cursor controls used in
both live displays are compatible with the VT100 standard, which
allows the program to be run basically from any terminal. An
optional X Window graphics display shows the typical world map
tracking chart. The orbit prediction can be run either
interactively or in a batch mode. In the latter case all
necessary parameters are specified on the command line. The
program uses the NORAD/NASA two-line Keplerian element (TLE)
sets directly.

The current version of SatTrack can track a single satellite
and/or display multiple satellites for a single ground station.
It also can control suitable ground station hardware, like
antennas and radio equipment, and has an autotrack mode in which
it switches automatically between a number of specified
satellites. For calibration purposes tracking of the Sun and the
Moon are also provided. Future releases will provide more
options. SatTrack requires about 5 MB of disk space in the full
distribution with eight different world maps (2 styles, with 4
different sizes each, to fit everyone's screen and taste) and
less than 1.5 MB of memory at run time. More information can be
obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this

program operates under a multiuser environment, each user on the system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11 from: pilot.njin.net

<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

cd /
tar xvfz dove.tgz

Where and How to obtain it.
You can obtain Dove from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple, yet useful utility that generates Keplerian data files in the NASA 2-line format from data entered through the keyboard.

Status
Complete.

System requirements
kepgen is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data files in the NASA 2-line format using orbital data entered via the keyboard. kepgen was created out of the need for generating 2-line orbital files from orbital data copied from WA3NAN audio transmissions during Space Shuttle missions. The files created can be read by virtually any satellite tracking or orbital prediction program. kepgen comes pre-compiled (a.out format) with a man page entry for ease of use.

To install kepgen you should use the following commands:

```
# cd /
# tar xvfz kepgen.tgz
```

Where and How to obtain it.
You can obtain kepgen from: pilot.njin.net <ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include software for controlling the newer breed of radios, logging programs, QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.
Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
Brandons code was rolled back into the main jnos distribution, so development on the two runs in parallel.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback and slip).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/jnos/jnos110i.zip> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.2. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.3. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.4. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated 30 Jun 1995. The latest binary version supports:

- MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

- various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

- Simple dialer, to allow connections through AX.25 or NetROM nodes.

- White Pages

- Transient handling of type A (ACK messages).

- SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

- Message filter mechanism

- Field swapping (like SWAPP.SYS in FBB).

- Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain LBBS from: G7PIT's ftp site <ftp://rsl_pc3.ion.le.ac.uk/pub/LBBS>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of

PacketCluster nodes with some experience on both PacketCluster
and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from
a users' point of view. It allows multitasking and different
priorities for different things.

• The software detects looping DX spots without generating endless
messages. clx filters out such duplicate information. We have
implemented a concept which allows us to connect the network at
multiple points, which would formerly have been called a
"Cluster Loop". clx knows of so-called "active" and "passive"
links. The outcome is that more DX information is seen by clx.

• An interface to call your external programs (even dialog
programs).

• clx uses modern programming concepts like shared memory for
common data, lex & yacc to implement command language, shared
libraries to keep binaries small (this is still on our wish
list), remote procedure calls for inter process communication.
It is strictly modularized with its own dedicated process for
every major task.

• Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local
users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

- The following is the only application program which can be run on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

- A console monitor to watch ongoing activities
- Speed optimization
- An internal clx protocol
- An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

- 00Index
- clx_200.tgz
- install.clx
- README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-
commercial use, but the authors want to keep track of who is
using their product, so before you can actually use the software
you have to ask for an encrypted callsign string to be placed in
the configuration file. You must send mail to
<clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to
allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. DPTNT Terminal and BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than

the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
TNT by itself is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. The DPTNT package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or

ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG
<http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>
Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com
<ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.
Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table
style conversation. It is compatible with the NOS convers
servers, but provides extra facilities such as saving/restoring

of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.
5.12. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@triode.apana.org.au>

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small vk2xlz <csmall@triode.apana.org.au>

5.13. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, <mwestfal@.csci.csusb.edu>

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.14. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, <csmall@triode.apana.org.au>

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and

convert it into a talk request for a user on the host machine.
This may also be configured for use with the ax25d program so
that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't
actually defined anywhere (except the source), the ttylink
protocol from NOS has become the defacto standard, at least for
amateurs, to provide keyboard to keyboard communication over
tcp/ip. This daemon fills the need for something to answer
ttylink requests to linux machines.

To build and install the software, I did:

```
# cd /usr/src
# tar xvfz ttylinkd-0.02.tar.gz
# cd ttylinkd-0.02
<edited the Makefile to change the SYSOP_USER>
# make
# cp ttylink /usr/sbin
<edited /etc/service, /etc/inetd.conf as instructed in README>
# killall -1 inetd
```

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

Licensing/Copyright
GNU Public License vers 2.0
6. Morse Code

Software for use in conjunction with, or for facilitating Morse
communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz> or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro <lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>
Licensing/Copyright
Copyright held by University California, Berkeley. Freely

redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit
and 8-bit sample resolution on supported Linux soundcards. It's
display is something akin to a high-end spectrum analyzer with
falling peaks. Andrew is working on an X-Motif version to be
released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz>
and sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath, veliaa@rpi.edu

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.8. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.
System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page

<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens, bruce@pixar.com

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, <tuna@cag.lcs.mit.edu>

Description
A rotating earth for X-windows root window. It has real life

shading, and options for geostatic view, and non geostatic view.
A prettier and more modern version of sunclock but requires a
bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture
of the earth onto your X Windows display. It offers either an
orthographic view as you would see from space or the map like
mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The
copyright notice included states that xearth is freely
redistributable so long as the copyright notice is left intact,
and be included in documentation.

Contributed by:
Kirk Johnson" <tuna@kanchenjunga.lcs.mit.edu>

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible.
So I'm keen to hear about any developments or products that I don't
already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like
the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some
other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing?

Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

<terry@perf.no.itg.telecom.com.au>

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

I think part of the reason that 50% of the folks you've met fit that category
is because you're here in RI - the old quid pro quo state.
>
>Stereotypes do have a basis in fact. That's how they get created.

In some cases yes - as a matter of fact I had occasion to stop into the
supermarket yesterday. The store was wiped clean of most merchandise and
at the register the majority method of payment was food stamps held by a
certain minority. But in other cases no - stereotypes don't apply. As an
example you frequently bust my chops about mob related things because I
happen to have some Italian ancestry but that has never been my thing. I like
having a job I can quit without having to die. :)

>Actually, the money can be considered well spent by some.

>One can spend $400 on a radio that can do voice, 1.2k packet, and 9.6k
>packet...on ANY frequency of his choice, verses a $150 rock bound rig that
>can only do one thing, on one frequency.

>It really depends on the person, and how they intend to use their equipment.

The money would be better spent on a previous-model transceiver (second hand, or special offer by the hamshop because they can't sell those "not ready for 9600" transceivers anymore) plus a dedicated data radio.

>>When a reasonably well documented article like the one in QST fails
>>to hit the brains of the newcomers, we have a problem.

>Are you slamming hams who dont get, or read QST magazine? Are you
>saying that it should be some sort of requirement to read QST?

No, I am assuming that the newcomers can't read. And you show it very well by asking the above question.

>>Plainly stating
>>"what Kenwood tells you is not true" is not going to make much impact,
>>and I doubt any amateur is interested in going through a legal case
>>against the radio manufacturers and distributors about making false
>>claims in their commercial advertisements.

>Very true. I cant afford such legal fees, however, if I ever bought equipment
>that didnt do what the manufacturer claims, and they didnt make it right, not

>only would I never buy anything from them again, I would spread the word on
>them as well.

That is what I am doing. I will not buy Kenwood equipment, and not only
for the reasons discussed in this thread.

Unfortunately for you, you did not know about that. And you did read the
advertisement by Kenwood and/or the recommendation by a hamradio shop
whose owner probably isn't even active on packet radio. Pity for you,
and all the other packet radio users on your channel (and the channels
close to it).

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

14.5. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

Configuring the pms program is still a little clumsy at the moment because it is new but bare with it while Dave works on it. The only difficult part is modifying the source code to support your local mail delivery agent and whether you use the ttylinkd program or the talk-ax25 program.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

14.5.1. Customising pms.c

If you take a look at the pms.c file in the ax25-utils package you will see that there a few items that you can configure. Perhaps the most important to configure is the one that allows you to specify what local mail delivery agent you use. In most installations the deliver program may well work, but in the minimal installation on my gateway

machine I needed to modify the line that previously said:

#define MAIL_DELIVERY_AGENT "deliver %s"

to:

#define MAIL_DELIVERY_AGENT "/bin/mail.local %s"

There is no easy way of knowing what local delivery agent your machine is configured to use, so perhaps you could simply look for either of these files in the obvious places and choose whichever seems to be there.

I also have the ttylinkd program installed, so I needed to modify the section relating to it. I keep my copy of the ttylinkd program in my /usr/sbin directory, so I modified the line that previously said:

/* #define MY_TALK "/usr/local/sbin/ttylinkd" */

to:

#define MY_TALK "/usr/sbin/ttylinkd"

If you use the talk-ax25 program then you would remove the /* and */ from around that line instead.

There is one last definition that might be useful to you, and that is if you have a default email gateway. This line is the line containing the string MY_GATEWAY. If you have an email gateway that you use, then you should remove the comments from this line and change the address to that of your gateway.

14.5.2. Create the /usr/local/pms/motd file.

The /usr/local/pms/motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

14.5.3. Create the /usr/local/pms/info file.

The /usr/local/pms/info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

14.5.4. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine.

You make this association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine, so any mail for vk2ktj on the pms will be sent to terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

14.5.5. Add the PMS to the /usr/local/etc/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.
14.5.6. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/local/bin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

15. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

15.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this

would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

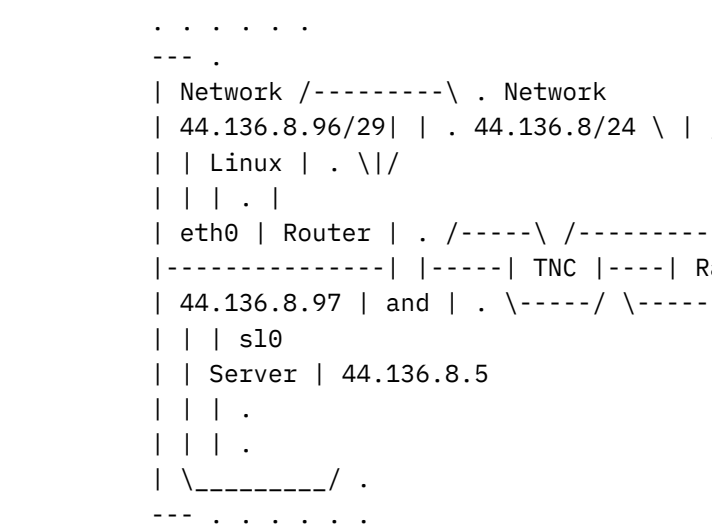
These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

16. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

16.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
```

```
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
axattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/usr/local/etc/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/usr/local/etc/nrports

# name callsign alias paclen description
netrom VK2KTJ-1 LINUX 235 Linux Switch Port

/usr/local/etc/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 gw 44.136.8.97 window 512 mss 512 eth0
```

The use of the mss and window parameters means that I can get optimum performance from both local Ethernet and radio based connections.

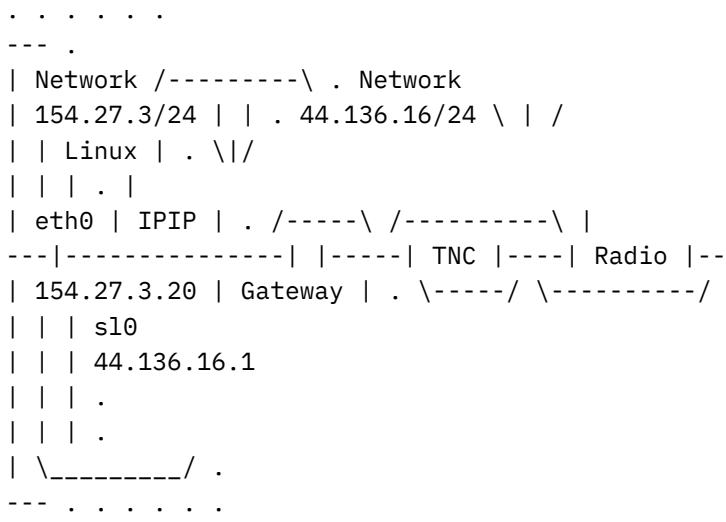
• I also run my sendmail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

16.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways around the world. The new tunnel driver supports multiple encapsulated routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0

```

Some points to note here are:

- The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

- You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

- The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to

a separate file and read in using the bash source /etc/ipip.routes
command (assuming you called the file with the routing commands
/etc/ipip.routes) as illustrated. The source file must be in the
NOS route command format.

• Note the use of the window argument on the route command. Setting
this parameter to an appropriate value improves the performance of
your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

17. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:
subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

>than trying to force the people whose views you may disagree with into
>yet another form of "second-class citizenship" by censoring them off
>to
>some obscure sub-group that may or may not get distributed.

Our .policy group certainly is not obscure, and if its not carried
one's site a simple request to the news person should result in
its subscription. If not, go with another provider who carries it.

I'm trying to determine just what is the matter with you, Karl. We got
a very efficient rec.radio.amateur hierarchy set up but you refuse to
comply with the charter. Anarchy ruins a society and a newsgroup.

>There are too damned many newsgroups to keep up with as it is,

...so consolidating all topics in a single group is your answer?

The other groups are our speciality groups (dx, antenna, homebrew,
policy, etc); if you've got a specialized topic to discuss, wouldn't
you want to post it to those who are interested and knowledgable
of such a topic?

I imagine your no code views got shot down on .policy so you're voicing
them to a different audience now.

>If you don't want to read the threads, don't read them ... but don't
>try banish them

Sort them to the proper group, Karl, not banish them. .Misc is not a
dumping ground - its for topics that don't fit into any of the groups.

>2. Between 16 and 19 years
>3. Between 20 and 30 years
>4. 30 and over.

>What ethnic group?

Asian women. I find them so much easier to get along with than American
women.

>What Radio stations do you listen to?

Well, let's see. The last stations I listened to were KH6AFS, DL4JAN, SP0CUW,
N6FU, and K7JYE.

>Do you listen to Pirate radio?

Unfortunatly, yes. But we don't call them pirates. We call them bootleggers, or
slims. We have to listen to Chinese, Indonesian, and Philippino slims every
day. Some countries just don't enforce the rules.

>Music choice. What are your choices in music that determine your radio choice?

None. We aren't allowed to play music on the radio. Against the rules.

>Why do you listen to those radio stations.
>Is it the Dj's; the general patter. Or what.

Because they called me. First, I call CQ, then they call me. Sometimes they
call
CQ, and I call them. But it doesn't do much good to talk on the radio if you
aren't going to listen.

>Date of where you collected the information.

Yesterday.

>Are you a student at all

No. I have my extra class license, so I don't have to study anymore.

>So what's that got to do with anything ? Excuse me if I sound crabby,
>I just woke up - with a keyboard in my face....

No problem, Jim. The point is that the 54% number is distorted by
people like me who rarely use Morse, but who had to answer yes to
the survey question about Morse (yes, I was one of the ones surveyed).
In other words, using that 54% survey number to show that 54% of HF
activity is in CW is totally bogus. That should also be obvious
because the total for all modes is larger than 100%.

If the survey reflected *usage* statistics, the total for all modes
would be exactly 100%. It isn't even close. The only real conclusion
we can draw from this data is that only 54% of amateurs *ever* use
Morse on the air for *anything*, even repeater IDs. And of course that
means 46% of amateurs *never* use Morse, except *once* to pass a test.
That's all we can say from this data. We can't draw any meaningful
usage statistics from it. We can get a bit of usage data from the
fact that the total for all modes *except* Morse also totals over 100%.
That would indicate that there are relatively few stations which use
Morse exclusively, and obviously, while they aren't using Morse, they
aren't contributing to Morse occupancy of amateur frequencies.

One could be tempted to argue that a test element on something nearly
half of tested amateurs never use shouldn't carry much weight on the
exam. But this isn't a valid argument. Test elements aren't supposed

to be about popularity. They are supposed to satisfy some legitimate government concern. That concern used to be so that life safety services with only Morse capability could warn off amateurs who were causing them interference. With the cessation of Morse usage by the life safety services, that concern has become moot. That leaves as the only rationale for continued Morse testing its use as a "rite of passage". But that isn't a legitimate government concern. Government's purposes do not include running fraternity initiations.

>the other, depending on the timeframe under which each was conducted.

The two surveys are dated 6 months apart, with the ARRL member survey
being the later one. I thought the contrast was interesting, but it
doesn't necessarily say much about the technical competence of the two
groups. After all, AOL has removed the necessity for many of us to buy
diskettes thanks to their incessant mailings, so getting connected to
the net isn't an indication of great technical accomplishment. It is a
significant deviation between the general amateur population and that
subset who are ARRL members, however.

I *suspect* it indicates that the ARRL membership has a larger percentage
who don't own computers than the general amateur population. This may be
because the ARRL membership is older than the general amateur population.
While age alone isn't an indicator of technological obsolesence of skills,
and I'm sure we all know examples of elderly people who are on top of the
latest technics, it is true in general that the elderly are more set in
their ways and less quick to adopt new ideas and new techniques than
younger people, IE they've lost the sense of wonder and adventure that
most younger people have. (Some young people seem born without it, and
are "old" while still children, and some old people never lose it, but

there is a difference in general between the groups according to age.)

I've even seen that here with some of the older (or at least older in spirit) members of our groups bemoaning the passing of the slide rule for the electronic calculator, or the taking of square roots with only pencil and paper. Younger people have grown up with the calculator, and increasingly with the computer. It is a simple basic tool to them. To some older people, it is a mystery which they don't quite understand or trust.

To amateurs of whatever age who have retained a zest for learning, and an adventuresome spirit, new technics are their lifeblood. They can no more resist trying the latest thing than they can resist breathing. Those who have lost, or never had, that zest and spirit, probably can't understand this.

Sure is!

> Is anyone curently doing it?

A lot of people- there are many Internet <--> Packet gateways. Try going to
http://www.ampr.org/ to find out more.

> If so, how fast is it (baud rate) and how much does the service cost?

If you are connected through a packet modem, the speed is determined by how
fast your packet modem is. If it's 300 baud, then everything will crawl along,
even if the gateway is connected to a T1.

> How far can it be reliably used on a daily basis (how many miles)?

Using an antenna, you can get as far as the antenna is good for. I doubt
you'd be able to access a packet --> internet gateway in southern california
from southern florida, especially on 2 meters. :) However, if you are going
backwards (internet --> packet), it all depends on which stations the packet
station are connected to is hooked up with.

Good Luck,
Kevin Lo

based on your call sign, the W2 buro is where your incoming cards will be forwarded.
The sorting and mailing is handled by the North Jersey DX Asociation

Cost is 50 cents per envelope credit and it is suggested that a minimum of 10 credits
be paid for. If you expect lots of buro cards maybe more

send me a fax # and i can get you an application or you can send
to:

NJDXA

2413. Who actually ENJOYS CW and could care less about throughput?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-05 00:00:00 UTC
From: zommbee@nwlink.com
Message-ID: <50le25$6oa@texas.nwlink.com>
Source record: 217511

Hi everyone.

This is a legitimate question. I am NOT (repeat NOT) trying to create a flame war or spam war.

I enjoy CW emensely, and have for years. Although I only copy about 10 or 12 WPM most of the time, it's still my major mode. I love the sound, the way you can tell something about the other guy by his 'fist', even if it is a keyer (we all adjust them differently, after all). I don't care one bit if it is archaeic, or if the throughput is slow. It doesn't matter to me that come 1999, the world will abandon it as a commercial communication mode (officially, anyway). I KNOW I could get MUCH faster data throughput using packet or something else. But I don't care - I ENJOY it. It takes up almost no bandwidth, and is harmless to anyone who doesn't understand it.

This is NOT to get feedback on whether it should be required for upgrades or anything at all. I am ONLY asking how many people ENJOY CW? Now here's the clinker - How many enjoy CW who have only had their tickets for a couple of years or less? I get the impression from reading these newsgroups that only us 'old timers' (I've been licensed for 22 years and I'm 35 years old) actually LIKE CW, that ALL newcomers HATE it, and resent being told they have to learn it. Is this true? Or do newcomers LIKE code? and USE it?

AGAIN, I am NOT ASKING if you think CW should be required. Don't reply if that's what you want to discuss. I ONLY want to know if you ENJOY CW, and are a relative newcomer to ham radio. (OT's ok too, of course).

There have too many mean-spirited threads about the requirement issue, and I don't want this to be another.

Let this be a friendly thread, whether you love CW or hate it. I honestly want to know, and would love to read postings (or emails, for that matter) from both sides, but mostly from relative newcomers.

Am I alone in my opinion?

Thanks to all who reply.

:>BABBLE. I don't know about in your part of the world, but in my part
:>you can't find another real person on PACKET on HF, more less Clover.

Slightly off topic, but I can't resist.....

My packet station is on 24/7 just waiting for real, live people. Pity it doesn't happen very often anymore. I much prefer live "chat" to BBS crap.

BTW, can somebody tell me why some idiot has to park his HF BBS on every damned frequency until users can't swing a dead cat without having their conversations interrupted by BBS mail beacons?

Actually, they're only partly to blame. If people would stop logging into HF BBS stations, then may these selfish bastards would get the hint. 28.105 LSB used to be a users' frequency until a couple of jackasses decided to make their "wonderful" BBS available. WE DON'T NEED A BBS ON EVERY DAMNED FREQUENCY! I've heard no less than 3 HF BBS stations eminating from Florida on 28.105 LSB at various times over the last 2 years. I make sure those calls go right into the SUPC list.

:>You have to realize that now that we all use this wonderful medium called
:>Internet, Packet and Clover are probably on the way out, not on the way in.
:>Packet was at one time an almost viable means of spreading information
:>amoungst the ham community, but it's OBSOLETE now that the internet
:>is here. It was fun to screw around with, but it's not worth the trouble :>anymore - too slow, too unreliable.

Couldn't agree more. I used to live for packet chat nodes, but since the advent of flat-rate ISPs, it's not even a concern anymore. Much easier and more reliable to use IRC on the 'Net, than to try to get to a chat node 100 miles and 4-7 nodes away. Response time is a hell of a lot better, too. Doesn't take 5 minutes (or LONGER) to get an answer to something you typed.

>on the main chassis. Project seems likely.
>
>Good luck
>Jim Gyer KC7RKL (docjim@getnet.com)

I like the little Curtis 8044ABM chip. It's a bit more ($19.95) but you can make the circuit design as simple or as detailed as you wish.

I built a "bare-bones" circuit with just a pot for speed; the circuit board is 1 1/2" X 1 1/2" and I found a tiny box that just accomodates the board, pot, jacks and 9 volt battery. Probably uses half a dozen resistors and a few capacitors in the circuit, plus a couple diodes and transistor.

You can go all-out with the chip and build a circuit with sidetone, speed meter, variable weighting, the works, but it will be on a larger board.

It is a versatile IC for its price.

This works, I did it and have already received $682.00 in the past week.
****
Hello! I've got some awesome news that I think you need to take two minutes to read if you have ever thought "How could I make some serious cash in a hurry???" , or been in serious debt, ready to do almost anything to get the money needed to pay off those bill collectors. So grab a snack, a warm cup of coffee, or a glass of your favorite beverage, get comfortable and listen to this interesting, exciting find!
Let me start by saying that I FINALLY FOUND IT! That's right!. I found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes like multi-level marketing, mail-order schemes, envelope stuffing scams, 900 number scams... the list goes on forever. I have tried every darn get rich quick scheme out there over the past 12 years. I somehow got on mailing lists for people looking to make money (more like 'desperate stupid people who will try anything for money!'). Well, when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Circuit City Card AND my Visa...I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right away. I can smell a money scam from a mile away these days, SO I THOUGHT....
I thought I could sniff out a scam easily. WAS I WRONG!! ....I LOVE THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe a tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail'for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in

position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the mostdetailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name to your list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in: "You were

in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be be 3, 5 wil be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse' to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like..."Get one million dollars flooding in your mailbox in two days!"

You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

9. (This step added by Charles Reiley). Hello, This is exciting, isn't it?! While I'm on the list, just add a note saying "Please include extra money tips" with your name & E-MAIL address, and I will (FOR FREE) send you some neat methods to increase the money you will receive with this plan. Why?... Why not? I'm not a selfish jerk...I like helping out others. E-mail just makes it a touch easier and cheaper, too! After I drop off the list, I can no longer offer you this advice, obviously, but maybe someone else who gets my tips will offer and simply replace my name on this step number 9. Good luck and give this plan your all, it will definitely pay off! Like Mike said, HAVE FUN WITH IT!!!

10. (This comment added by Mike Lorincz) Hell dude, this is great, just send the money and wait like 1 week, then all of a sudden, BOOOOOOM! Mail flood full of dollar bills. Hahahah its great

Its pretty simple, Jeff. I have honestly come to the conclusion that
Carl believes men in black suits are following him around. He believes
everything is a conspiracy to someone suppress his opinion. He has
purposely misattributed several comments to me, and when asked to back
up his claims that I've made these remarks, dismisses them with a
'oh, I can't be bothered'.

On one occasion he made the comment "the gloves are off". I think
its pretty clear that Carl is not interested in rational discourse
about the CW requirement. At this point he has merely become a loose
cannon with his own personal agenda. In his quest for the Holy Grail,
it doesn't matter what anti-social behaviour he participates in,
because, well, its justified all in the name of the greater good.

>outside!!!

No narrow band FM on Inmarsat I am afraid. Inmarsat-A uses a "medium"
bandwidth FM, I believe. (I never had occaision to really look into it
when I was working Inmarsat-M stuff, to tell the truth. Signal to noise
and bandwidth considerations suggest it is a 50kHz or so deviation.)

With people shifting to "M" and "B" away from "A" listening in will become
more and more difficult. (Also note that an increasing amount of A traffic
is going through the "high speed data" option connections, essentially
"1-B + 1-D ISDN" or "switched 56". The interesting stuff is also encrypted.
I'd look elsewhere for entertainment.

(And don't email me for more info. This is ALL I am going to tell ANYONE.)

>It only IS 9600 baud ready in YOUR opinion, and possibly Kenwood's.

[subtle insults snipped]

No Rob...thats a fact. Want to come over to my house? It spewing data
as we speak at 9.6k.

Take care.

I, for one, love CW. However, since I've been a ham for 14 years,
I guess that makes me an "old timer".

Having "Elmered" several young people to their tickets, let me
tell about a few of them:

John, KB2PDX (Tech Plus) was once a Navy signal man. He operates
100% CW, and has made hundreds of QSO's on 80, 40, and 15 meters
since getting his ticket about 2 years ago. He's about 40.

Hank, KB2PNC (Tech Plus) started with the Technician license. He
uses VHF and tries 10 meters when open, but has never gotten into
CW. He is still in his teens.

Tim, KB2AXJ, started with ham radio while in college, and got into
HF, both CW and SSB, back when there was an ionosphere. We had a
club station at the university, and got lots of good use out of it.

My experience is that today's teenagers, with their computer -
oriented outlook, don't appreciate Morse as much as the older
folks do. This may be a generalization, but it might also explain
the antipathy to CW expressed by many of the bit-surfers on the Net.
I appreciate Morse as the _only_ digital mode that doesn't require
any hardware or software to use!

[ANARTS - Australian National Amateur Radio Teletype Society]

This is the Australian National Amateur Radio Teleprinter Society,
with our weekly RTTY broadcast. We transmit on the following
frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)
7.045 MHz -3 0030 UTC VK2CTD (COL)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)
14.091 MHz 0030 UTC
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2WI
146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

QSL cards can be obtained by applying to the Broadcast Officer
at P.O. Box 60 Blacktown nsw 2148, with station identification,
bulletin no., date and the first news item or part thereof. In
Australia include s.a.s.e., if overseas include 1 IRC for airmail.

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

A.N.A.R.T.S. News Bulletin 924 1 SEPTEMBER 1996

COLS COLUMN

THIS WEEK WE HAVE ANOTHER CHAPTER IN THE EARLY TELEGRAPH
SERIES. AND I BRING YOU 'DYARS TELEGRAPH'. IT IS INTERESTING
IN THAT IT USED BOTH A STATIC ELECTRIC MACHINE AND CHEMICAL
REACTION TO PRINT THE MESSAGE.

ON THE 8TH MARCH 1848 DYAR WROTE A LETTER TO DR BELL OF
CHARLESTOWN IN THE USA CLAIMING HE HAD EXPERIMENTED WITH THE
ELECTRIC TELEGRAPH IN 1826 AND 1827.

HE WROTE 'I INVENTED A PLAN OF A TELEGRAPH...BY MEANS OF
INSULATED WIRE, SUSPENDED ON POLES, AND THROUGH WHICH I
INTENDED TO SEND STROKES OF ELECTRICITY, IN SUCH A MANNER AS
THAT THE DIVERSE DISTANCE OF TIME SEPARATING THE DIVERSE
SPARKS SHOULD REPRESENT THE DIFFERENT LETTERS OF THE ALPHABET,
AND STOPS BETWEEN THE WORDS ETC. THIS ABSOLUTE, OR THIS
RELATIVE, DIFFERENCE OF TIME BETWEEN THE SEVERAL SPARKS I

INTENDED TO TAKE OFF FROM AN ELECTRIC MACHINE BY A LITTLE MECHANICAL CONTRIVANCE, REGULATED BY A PENDULUM WHILE THE SPARKS THEMSELVES WERE INTENDED TO BE RECORDED UPON A MOVING OR REVOLVING SHEET OF MOISTENED LITMUS PAPER, WHICH, BY THE FORMATION OF NITRIC ACID BY THE SPARK IN ITS PASSAGE THROUGH THE PAPER WOULD LEAVE A RED SPOT FOR EACH SPARK....

NOW YOU WILL PERCEIVE THAT THIS PLAN IS LIKE THAT KNOWN AS MORSE'S TELEGRAPH, WITH THE EXCEPTION THAT HIS IS INFERIOR TO MINE, INASMUCH AS HE AND OTHERS NOW MAKE USE OF ELECTRO-MAGNETISM, IN PLACE OF THE SIMPLE SPARK, WHICH REQUIRES THAT THEY SHOULD, IN ORDER TO GET DOTS, OR MARKS, UPON PAPER, MAKE USE OF MECHANICAL MOTIONS, WHICH REQUIRE TIME, WHEREAS MY DOTS WERE PRODUCED BY CHEMICAL ACTION OF THE SPARK ITSELF, AND WOULD BE FOR THAT REASON, TRANSMITTED AND RECORDED WITH ANY REQUIRED VELOCITY'. DYAR THEN DESCRIBES HOW HE SUSPENDED A WIRE ON GLASS INSULATORS ROUND THE OLD UNION RACECOURSE AT LONG ISLAND. THE EXPERIMENT WAS SUCCESSFUL ENOUGH TO MAKE HIM CONTEMPLATE A LINE TO PHILADELPHIA.

HOWEVER HE BECAME INVOLVED IN LEGAL SUITS INCLUDING A THREAT OF AN ACTION FOR ILLEGAL COMMUNCATION BETWEEN CITIES. HE DID NO MORE WORK ON TELEGRAPHS, WHICH IS UNFORTUNATE BECAUSE THIS MUST HAVE BEEN THE FIRST 'RECORDING' TELEGRAPH. DYAR WAS THE FIRST PERSON TO NOTICE THAT ELECTRICITY CHANGES THE COLOUR OF LITMUS.

DYAR WAS FOLLOWED BY OTHER EXPERIMENTERS WHO ATTEMPTED TO USE THE COLORATION 'OF CHEMICALLY TREATED PAPER TO INDICATE THE RECEPTION OF A TELEGRAPHIC SIGNAL, AMONG THEM WERE - MORSE, DAVY AND BAIN.

WELL THATS IT FOR THIS WEEK...YOU WILL HAVE TO DECIPHER THE STYLE OF WRITING IN USE WHEN DYAR WROTE TO DR BELL TO MAKE SENSE OF HIS INVENTION...73S DE COL.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(23 AUGUST - 29 AUGUST)

ISSUED ON 30 AUGUST 1996

SUMMARY
Date 23 24 25 26 27 28 29
10cm 74 75 75 74 74 73 74
A 13 12 12 17 15 15 (23 estimated)
T 12 13 12 17 15 15 27

SOLAR ACTIVITY WAS VERY LOW 24TH, 26TH TO 27TH AND 29TH AUGUST, AND LOW FOR THE REMAINDER OF THE WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS UNSETTLED TO
ACTIVE ON 23RD AND 25TH; QUIET TO UNSETTLED ON 24TH AND 26TH;
QUIET TO ACTIVE ON 28TH, AND ACTIVE TO MINOR STORM ON 29TH
AUGUST.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED
MONTHLY VALUES ALL WEEK WITH ENHANCEMENT TO 20 PER CENT 03-10
UT ON 29TH. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 24TH.

FORECAST (30 AUGUST - 05 SEPTEMBER)

GEOMAGNETIC: ACTIVE ON 30 AUGUST, THEN DECLINING TO UNSETTLED
ON 31 AUGUST. QUIET TO UNSETTLED LEVELS ARE
EXPECTED ON OTHER DAYS.

FREQUENCIES: MOSTLY NEAR PREDICTED MONTHLY VALUES, HOWEVER
DEGRADED HF COMMS QUALITY IS EXPECTED DURING
INTERVAL 30-31 AUGUST DUE TO GEOMAGNETIC ACTIVITY.

Actually Ron it is more than defending his purchase. Chris has never been wrong. He thought he was once but that turned out not to be the case. Once Chris makes up his mind he doesn't get confused by facts or expert opinions. "I said it, I believe it, that settles it." As long as anyone argues with him he will spew his nonsensical defense. Gary is on the right track, he doesn't have a clue, he doesn't want a clue so don't waste any more time or bandwidth on him. Maybe then he will go back to alt.mcdonalds and alt.politics.homosexuality. Yes Chris you do post to these groups; before you deny it you might want to check Dejanews it's quick, easy and there you are.

I am not at all that surprised that Adell was unable to see the analogy.
Perhaps if I correct some of his misconceptions, i.e. IFR ratings for pilots,
and be a tad more explicit, he will find it easier to understand my point.
However, I suspect that Adell doesn't like to be confused with the facts.

>
> helicopter pilots put alot of time and practice into attaining their licenses
(certifications).

No arguement on that point.

> a better comparison would be allowing airplane pilots to get their licenses without ever
having to learn IFR.

No it would not. I just queried the pilot certification section in Transport
Canada and they said that the only pilot certification in Canada that
requires an IFR rating is for the highest class of certification the Airline
Transport rating for an airplane. This level of certfication is a
requirement of the air carriers, and is not a requirement on the government.
Furthermore, there is no requirement for the holder of an Airline Transport
rating for helicopter to have an IFR rating. Although there no regulations
which require such a rating, most carriers require their pilots to do so. In
other words, one could hold a pilot's licence, both private and commercial,
and lacking an IFR rating is perfectly acceptable. Considering the

trans-border traffic between U.S. and Canada, I have no reason to believe that the situation is similar if not the same in the U.S. (Correction is indeed invited.)

> Why should they, they only fly when the sun is out, IFR is passe, I never use it or need it.

Exactly. If one wishes to fly in inclement weather, i.e. fly with instruments, then one needs the rating. However, if the pilot has no need to do so, or accepts the fact that they cannot fly in bad weather, there is no requirement to have the IFR.

>
> mountain climbers do so by choice and they practice their skills to achieve a level
> of competency, unlike the whinny crybaby give HF cause i want it types.

I agree with you that mountain climbers do so by choice. I also point out that helicopter pilots learn their skills by choice. Yet, it would be ridiculous to require helicopter pilots to learn to climb a mountain in like manner to testing for Morse code knowledge in order to operate on the HF amateur bands. Yet, those who believe that Morse code is a necessary skill to have prior to being authorized to use the HF frequencies regardless of the proposed mode of communciations, would have to also advocate that all pilots must know how to climb a mountain in order to be a pilot.

I do not agree with the view that Morse code testing should be abolished premised on the idea that the individual may not use it. No, it should be abolished because there is no justification for the government to require such knowledge in order to operate on the HF bands without interfering with other users. It is no more justified to demand Morse code knowledge than it would be to require that amateurs must equip their stations with multi-mode controllers or SSTV capabilities, or any other modes and capabilities available to amateurs.

>
> tell you what....I'll arrange to give you all HF privledges without practicing or taking
> any code if you'll climb Mt. McKinley without ever having climbed before.
>

Adell's offer is moot because I have passed Morse code examination, not only at 15 wpm for my Advanced certificate, but also at 30 wpm plain text and 25 wpm cipher groups for my employment at that time.

> In fact, I'll make sure you get your new codeless HF license on the way down (SPLAT)

Adell should refrain from making promises that he can't deliver. As well, the premise of his offer, that being that in order to qualify for his largess, I must imperil my life, is crude, uncalled for and offensive. I can only conclude that his offer is utterly without merit and an indication of his desparate inability to justify his views on the continuance of Morse code testing.

Lee,

I think your idea is a good one. I also think that .misc is a good
place to trash the no-coders. Since no code dose not fall within any
of the heirarchy it is a misc.

What is more important is that people post messages in the correct
places. That people learn how to use the news programs and stop

spaming all over the place. A perfect example would be how many times does one see a "for sale" ad in .space or .homebrew and even in .misc? When it is VERY CLEAR that "for sale" ad's belong in .swap. Misposting is the highest form of net abuse, or at least it was in the old days.

I think every understands what I am talking about.

2431. Beat the pile-ups>>Cyberscheds now Available @ sarrio.com

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-05 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-0509960740050001@host05.cyberg8t.com>
Source record: 217529

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site for hams to post their request for over-the-air schedules. Included in the posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted.

Visit http://www.sarrio.com and participate in your first cybersched.

> So we should base what the ARS does on what happens in other services?

Well, I guess we've settled another one. The ARS is, in fact, the only place where CW is used anymore.

To answer your question, yes, we should base what the ARS does on what happens in other services. The others have found it useless. Most prospective members of the ARS do likewise. The other services are developing a voracious appetite for spectrum. The other services are working hard to get as much throughput out of their investment in equipment AND spectrum as possible. The ARS is doing precious little of any of this. Whatever happened to "developing the art"?

Now THAT is a weird comparison, also wrong. There are tens of thousands of private pilots who "got their license" without learning IFR. No, the two hours one spends on IFR procedures in preparation for the private license is NOT "learning IFR", as is painfully evident in the number of VFR aircraft lost when their pilot's found themselves in IMC.

More to the point, one can learn to fly WITHOUT IFR. If one wishes to fly in IMC, one can jump through the extra hoops and learn that set of skills. No one is forced to learn something that he/she will never use.

I'd like to know what the point of DXing is if it is prearranged? I can
see it now, just a few years away:

"And I got this DXCC without ever having to turn the frequency knob. Just
fed my Internet hyper-linker into my 1000MP and used the voice synth/recognizer
in the PC to make the contacts. Hell, half the contacts were made while I
wasn't even in the house!"

2439. WB2VUK Resigns as ARRL Hudson Division Director

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-05 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RxByCtz.sanderman@delphi.com>
Source record: 217537

Paul Vydareny, WB2VUK, has resigned as Director of the ARRL Hudson Division effective September 3rd. Paul's resignation, sent by email to League Secretary and Executive Vice President David Sumner, K1ZZ, was accepted by President Rodney Stafford, KB6ZV. In accordance with the By-Laws of the ARRL, Vice Director Dr. Richard Sandell, WK6R, has assumed the directorship.

Sandell, of Scarsdale, New York, became Vice Director earlier this year when the League Board of Directors elected Steve Mendelsohn, WA2DHF, as First Vice President. Vydareny, who was Vice Director at the time, succeeded Mendelsohn. WB2VUK cited work and family responsibilities as the reason for his resignation.

WK6R had previously served as an Assistant Director under WA2DHF and as Assistant Section Manager for Education under WB2VUK and current Eastern New York Section Manager Rob Leiden, KF2PJ. Rich's wife and three daughters are all licensed.

Dr. Sandell has been very visible, having visited many of the clubs in the Northern New Jersey, New York City-Long Island, and Eastern New York Sections, which comprise the Hudson Division. He is currently a candidate for Director in the upcoming Division election and opposed by Frank Fallon, N2FF, of East Williston, Long Island. A new Vice Director will not be appointed due to the impending election.

In a related matter, the ARRL Board of Directors voted 12 to 2 to sustain a ruling of its Election Committee in an electronic vote held Tuesday. There was one abstention. The vote was required after the committee denied a nomination petition for Hudson Division Vice Director filed by Ben Friedland, K2PBP, of Mendham, New Jersey.

Friedland is a director and member of the executive committee of the Industrial Telecommunications Association, a membership organization of industrial and land transportation radio licensees whose interests in matters before the FCC potentially are in conflict with those of the League. Friedland's interest in the ITA arises from his business. He is President, General Manager, and 51% shareholder of the Morristown & Erie Railway, Inc.

Friedland were declared ineligible because of a business connection that is contrary to Article 11 of the ARRL's Articles of Association. K2PBP appealed the Election Committee ruling, necessitating the Board's vote on Tuesday. As a point of history, rulings of the Election Committee have NEVER been overturned by the ARRL Board of Directors.

The other approved candidates for the Hudson Division Vice Directorship are Peter Malvasi, WB2BYQ, of Ramsey, New Jersey, and J. P. Kleinhaus, AA2DU, of Scarsdale, New York. Balloting among ARRL members will begin later this

Fall.

Dave WB7AWK zommbee@nwlink.com, asks:

>"I am ONLY asking how many people ENJOY CW? Now here's
>the clinker - How many enjoy CW who have only had their tickets for a couple
>of years or less?"

Well, here's a relative newcomer who does enjoy CW. And, like you, Dave,
I don't care if the throughput is low and if the mode is archaic (it is),
I simply enjoy it as a mode.

Ironically, it was the code test that kept me off the air for about 30
years. I tried several times to learn code, but always got frustrated
and quit. I got my First Class Radiotelephone License primarily as a
"consolation prize" for the ham license I figured I never would have.
When the no-code Tech license came along in 1991, I was one of
the first in line.

In 1993, I became obsessive about getting on HF and also stumbled onto
the Koch Method of learning code. As a result, I passed my first and
only code test -- the 20 wpm test -- on the first try. I still had no
intention of using CW, though, but, thanks in large part to a local
Elmer, I started trying a few CW QSOs. To my utter amazement, I found
I enjoyed CW tremendously. Over the following year, the percentage of
my activity that was on CW grew steadily.

Today, I own three HF radios, none of which currently has a microphone
attached. I find CW operating pleasant and relaxing. I look forward to
Straight Key Night every year (though my arm hurts afterward!) and am
slowly learning to use my 1943-vintage bug. I've lost all desire to
yak on SSB.

Without getting into the code-vs.-no-code debate (at least in this post),
I'd just like to say that if we presented CW as the fun mode that it
is rather than as bitter medicine that must be swallowed, more people
would try it and find they like it.

Dave

Like yourself, I enjoy cw and it is my main mode of operation. My speed is also very slow - around the 13 - 14 (?) wpm.

Mine is probably a rather unusaul entry to the hobby.

I was about to start a the Duke of Edinburgh's Award Scheme at our local secondary school. Part of this involves the kids doing expedition work in the hills. What we need is 2-way radios, I thought. I enrolled in an RAE course and sat the exam in 1986. During the course I found that that to use the radios the kids would have to pass the same course and we would have to shell out about 200 UKP for each hand-held - not on!

I then more or less forgot about radio; never bothered about my licence; wasn't really interested. About 6 years later I thought it might be fun to have a go at the morse. To give myself a bit of enouragement I joined a local club; got my class B call (GM7OVQ) which I have never used; bought an hf rig. 2 years later (1994) passed the cw test, only just, and got my present call sign (GM0VIT). The first entry in my log is Oct 1994.

** I made my first contact 8 years after passing the RAE **

It took another few months before I made a cw contact but now seldom use anything else.

I'm the local "Rip Van Winkle" of ham radio. I was away from the hobby for twenty years following high school graduation in 1973. When I got back into it, I replaced my HW-16 and Hustler 5BTV with a used TS-940SAT and a Cushcraft R7. On HF, I use CW exclusively, with the exception of checking in to the local radio club/s 10m SSB weekly net.

On six meters --a band I've really come to love-- I use CW 30 - 40% of the time. It would be higher if there were more CW ops on six! There have been quite a few occasions when I was able to complete a 50 MHz QSO during a margin opening ONLY by switching to CW.

So am I a newcomer or an old fart?

>"73" Gary KF9CM KOX 8626

To all ham operators:

You better hope and pray that the bozo cop who gets dispatched to investigate an interference complaint is technically qualified to judge what is a CB station and what is a ham station. One listen to our local "boys in blue" will show you that a lot of them are incompetent at using their own two-way equipment, and now we are putting them in charge of deciding what is legal and what is not?

Your neighbors cannot tell and do not care whether or not that the voice they hear coming through their telephone is a ham or CB'er. Hams are legally allowed to use much greater power than CB'ers, and that extra power will interfere more severely with cheap consumer electronics than a legal CB station. (Yes, some 4 watt legal CB stations get interference complaints too!) So your neighbor calls the police to complain about "some CB'er" interfering with his TV, and "Mr. Uneducated in Electronics" who is dressed in a blue uniform rushes over and confronts the person who is allegedly interfering. The person may be using a legal ham or CB station and gets busted because the cop assumes that the station owner is doing something wrong! Can he tell a linear amplifier apart from an SWR meter or antenna tuner?

I don't know about you, Gary, but I don't have the time or money to go to court to prove that I am a ham and was running a legal station. How will the investigating officer know the difference between a CB linear and a 10 meter linear? I do not want my HF linear amplifier confiscated and have to go through to court to get it back.

Don't be too quick to celebrate my fellow hams!! The whole bill stinks, and anything that is passed that will affect your CB neighbors could possibly affect you too! Even if it doesn't, how long do you think it will be before they pass a bill giving the states permission to enforce interference from ham stations, cellular phones, cordless mikes and anything else that emits RF. Police officers who are technically qualified to judge what is causing the problem would probably make more mony if they used that electronic knowledge in another job relating to that field.

We have to stop any bills from passing that will give interference enforcement rights to anybody other than the FCC! Think about it!

It's probably the fact that GPS transmissions are Spread Spectrum and of
such low power that you won't hear them on anything but a GPS RX.

Dave,
I like CW. I use it regularly. I've been licensed about 3 years; I'm 40.

Been doing mostly VHF/UHF lately and I find it easier to work stations down in the noise with CW. I don't yet have have a tower, H frames full of yagis/ loopers and kw's. Just a multimode on 2M, transverters on 432 and now 903 and 10368mhz. I've found that I can enjoy it more when the band is up, and we can roll along at 20-25wpm. Then again, I'm more likely to just use SSB when conditions support it. It can be a real effort to copy at 10-15wpm, when I need to write the copy on paper to follow it. Above that it's easy to head copy.

73!

Which government are we speaking of here. Last time I looked there were quite a few
that had a say in code/HF requirements, each having 1 vote as to keep or remove code

It is no more justified to demand Morse code knowledge than it
> would be to require that amateurs must equip their stations with multi-mode

I'm very impressed. I have 2 purple hearts and a bronze star and my computer can decipher code up to 50 wpm.

However both statements, along with a $1.50 only get someone a subway ride. Why is that the qualifications of the person, I can do code standing on my head, or I can copy code backwards
while sitting on a horse, make them an authority?? Can't quite figure that out yest.

> > In fact, I'll make sure you get your new codeless HF license on the way down (SPLAT)

Source record: 217548

Dave,

I've been licensed for 23 years, and I like CW too. Here's a
few reasons that folks haven't mentioned yet:

1. It's neat to rely on -yourself- for communications...no
decoders, displays, status LEDs, etc. CW is kinda the
opposite of packet in this respect. Just a speaker and
your ears required.

2. CW is a good mode to use if you are in a house full of
sleeping people and it's 3 AM. Just wear headphones, and
you don't bother anybody. Not true for SSB or FM.

3. Got TVI problems? CW is more "stealthy" than the other modes,
because it's less obvious to laymen that radio communication
is at fault. The voice modes are harder to "cloak." (Of
course the best approach is to clean up the TVI!).

4. CW is good if you are on a budget. CW-only equipment is much
cheaper than today's SSB/CW/AM/FM radios.

5. Like to build your own (or repair your own)? CW circuits are
simpler to understand and fix.

6. Like to ham it up while on the road, in hotels, rest stops,
etc.? QRP CW gear can be REALLY small and light; makes
hamming-while-travelling easier. I'm talking here about HF
only ... I realize that today's V/UHF HT's are nice and small.

Lastly, the most compelling reason for me:

7. If you don't have a great station, CW will get you further
than voice. I've made lots of exotic DX contacts on CW that
I wouldn't have a prayer of making on, say, 20m SSB. For
those of us in the "low dipole and 100w" category (which
includes me), CW makes DX possible.

Just my two cents.

73 all,

Rich

If I have it correct all the international treaties require is an understanding of cw. Instead of total elemination why not relax it to 5wpm which anybody should be able to learn in a very short time. Besides if they know 5wpm & get a chance to use it they just might get hooked or at least not mind using cw.
Mark

No, Dave, I don't think it's true that all new hams hate CW. I don't think what you see in this newsgroup is indicative of what you would see in the general ham population. If you start paying attention to the great debate, you will see that the number of participants is rather limited. I enjoy CW. But I also enjoy other modes too. Thruput is not a consideration when I talk to someone with CW. My 'normal ragchew speed' is in the 25-30 wpm range. Sometimes I'll hear someone calling CQ at 10 or 15 wpm, so I just crank the knob on the keyer and call him. Thruput on CW can't be measured by sending speed anyway - most experienced CW ops abbreviate damn near everything.

I think CW intimidates a lot of new hams, even those who have passed the code tests. Certainly, you've heard of 'mic fright'. I think 'key fright' is a lot more common. A lot of people have a very hard time sitting down alone in front of a radio and making the first few CW contacts. It's something they need some 'Elmer' help with. I have a friend who has had an advanced license for a number of years, and just recently decided to upgrade to extra. He listened to the tapes, studied the theory, and passed the test. He is interested in CW, when he visits me he tunes around in the CW band and listens. But I don't think he has ever worked anyone on CW. He calls me on VHF and tells me about the pileups on CW, so I know he listens at his QTH. I think I need to sit down and help him get over his key fright and he'll get going on his own.

Another example. Field day in Guam is a 'non event'. Because we are so far away from the U.S. mainland, and we don't drag HF amps to the beach, we usually don't work many stations with our wire antenna and a hundred watts. This year there were 5 or 6 'new' hams that were the driving force behind the event. They put up the antennas, they brought the radio, they camped out all nite. I stopped by on Sunday afternoon to see how things were going. They had worked a dozen stations in as many hours of operating, all on SSB. I asked if they had tried CW. 'Nope'. I ask if they had a key. 'Yep, paddles. Keyer is built into the radio'. I asked if they would mind if I try CW and since they weren't working anyone anyway, they said sure. So we plugged in the paddles. I worked a few stations on CW, then I called CQ and we actually had stations calling US, which had not happened on SSB.

Several of them were really excited, as if it was the first time they had seen anyone actually USE CW. I got asked a million questions, asked for code tapes, and asked if I would be willing to run code practice on VHF for them. The interest is there, they just need some help getting started.

I had a good friend who helped me get started. I could call him on the phone when I couldn't figure out things on my own. But I had made a ton of CW contacts (with his call) before I got my license, so I didn't suffer from key fright. But I still needed help. First time I turned my radio on on a Saturday morning and heard 500 people calling 'CQ TEST', I called him and asked him if it was national equipment testing day. I called him one time and told him to listen to 10 meters, there was a DX station who kept sending his call but I had called him a hundred times and he had not answered me. After he got done rolling on the floor for a few minutes, he explained that the DX I was calling was a CW beacon, and he didn't think it would ever answer me...

So, to answer your question Dave, no, I don't think all new hams 'hate' CW. But I think most of them need more help getting started on CW than they would on SSB or FM. Personal help, not the kind of help you get from reading email on internet. I even think maybe some of them are a little bitter because they want to get started by nobody is offering to help them. It's much easier to say 'CW sucks' than it is to say 'CW scares me, I need some help.' And the new hams who enjoy CW are probably busy enjoying it, instead of writing about it here.

Hafa Adai,
Jim KH2D

P.S. As per Dave's request in his original posting, let's keep the debate out of this thread. Anyone who begs to differ with anything I have written here is more than welcome to differ with it - via private email.

I have a friend (WA9FFL) that is a died in wool Harley fan. He makes
several long road trips a year. His most recent was to Sturgis this year.
I know that he has a TenTec Scout and some Stick antennas that he uses
and gets great contacts. I don't know how he would relate to the term
"HOG MOBILE" but he wouldn't object to motorcycle mobile one bit. He is
quite proud of his Harley though.

Hurricane Fran Update 1

As Hurricane Fran approached the southeastern coast of the US, South Carolina section manager Mike Epstein, KD1DS, reports activation of an ARES/RACES net on 3993.5 kHz with the state SSB net serving as backup on 3915 kHz.

In North Carolina, section manager Reed Whitten, AB4W, reports that the Tarheel Emergency Net is convening on 3923 kHz. The amateur station at the state EOC in Raleigh also was to be staffed as of Thursday at noon.

In Georgia, SM Dot Fennell, KA4HHE, reports that the state SSB net will meet on 3975 kHz.

In Virginia, SM Chris Wright, KD4TZN, reports that the state emergency nets Alpha and Bravo will meet on 3910 kHz and 3947 kHz, respectively.

Hurricane Watch Net manager Jerry Herman, N3BDW, reports that the net is activated on 14.325 MHz in coordination with the National Hurricane Center station, W4EHW, in Miami as the storm approaches landfall.

Joe Schmidt, W4NKJ, coordinator, reports that National Hurricane Center station W4EHW was active and accepting the meteoroligical data from amateurs within 300 miles of the storm center, including measured wind speed as sustained for one minute, gust speed and barometric pressure. Send information with time and origin of report to w4ehw@fiu.edu, http://www.fiu.edu/orgs/w4ehw, via the Hurricane Watch Net or other nets.

Amateurs are advised to monitor storm nets but to not transmit on net frequencies unless directed to do so by net control stations. Emergency traffic takes priority over health and welfare traffic. Amateurs are advised to handle health and welfare messages originating in the affected areas first. Amateurs are further advised to refrain from sending inquiries into affected areas until such time as amateurs in these areas have indicated their ability to process them.

====== snip ======

Well, I like it too. Been licensed a few years and wanted to learn it the
second I got my ticket. I'm at 9wpm now and going for 12wpm (CA requirement).

Whether or not it SHOULD be a requirement is not the issue, as you stated.
I like it and I think everybody should make up their own minds. I'm a
firm believer, however, that both limitations and restraint should come
from within an individual and not be an imposition by others.

Hi Keith ...

It's been a long time, but the 100 has 6146's as finals.
These take 6 mils of grid current and run 250 ma. of final

current at the dip when properly loaded. Hope this helps.

2460. Vanity Call - Gate 2 - Questions?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-05 00:00:00 UTC
From: g-taylor4@tamu.edu
Message-ID: <50nd36$hos@news.tamu.edu>
Source record: 217558

Getting caught up on the mail and see gate 2 has been announced so I need to get my act together.....

I see the announcement states "each call sign must be one designated for the Region of your mailing address as follows: one of the contiguous 48 states - Regions 1 - 10" I'm having trouble interpreting (as usual) what the government means here. Does this mean I'm restricted to my call area of my address? I thought that recommendation got denied and you could apply for a call sign in any area 1- 10....which may be what this statement means.

Also, had seen something somewhere about submitting via FEDEX but there being a trick to it since FEDEX only goes to physical addresses and not POBs. Could someone refresh my memory......

Tnx, Greg, KD4HZ

No, not at all. But then again, for someone who can't follow an analogy, I
am not surprised that Adell would come to that conclusion!

> Yet, those who believe that Morse code is a necessary skill
> > to have prior to being authorized to use the HF frequencies regardless of the
> > proposed mode of communciations, would have to also advocate that all pilots

>
> Which government are we speaking of here.

Any of them.

> Last time I looked there were quite a few
> that had a say in code/HF requirements, each having 1 vote as to keep or remove code
>

Only in so far as the International Regulations are concerned. Once that
artificial barrier is broken down, there is no legitimate reason for
demanding Morse code knowledge prior to authorization to use the amateur HF

frequencies.

> It is no more justified to demand Morse code knowledge than it
> > would be to require that amateurs must equip their stations with multi-mode

> code up to 50 wpm.

So am I. But his 2 Purple hearts still isn't worth a quart of poisoned
panther piss when he thinks that he is empowered to issue a non-code HF
licence.

>
> However both statements, along with a $1.50 only get someone a subway ride. Why is that
the
> qualifications of the person, I can do code standing on my head, or I can copy code
backwards
> while sitting on a horse, make them an authority?? Can't quite figure that out yest.

Perhaps if Adell gave back his 2 purple hearts, he might achieve
enlightenment. Aside from that I have not idea what Adell's point is
anyways.

>

> >
> > Adell should refrain from making promises that he can't deliver. As well,
> > the premise of his offer, that being that in order to qualify for his
> > largess, I must imperil my life, is crude, uncalled for and offensive.

> To even consider my comment as trying to imperil your life is presumpteous and down
> right arrogant. Maybe if we went out a few times and you brought me flowers or candy,
> then I could make comments directed at you, but right now...wellllll
>

Such sarcasm is usually the purvue of either the psychologically deranged or
the morally inert. I will invite Adell to select either one that he feels
more comfortable with, I wouldn't presume to do so. But of course, I am
being sarcastic.

> I can
> > only conclude that his offer is utterly without merit and an indication of

>

Then instead of reading the postings in this newsgroup, perhpas he should
consider taking up something that befits his mental capacities. I have a few
recommendations, but I won't bore the rest of the readers on the newsgroups.

> i will continue to bring humor to all asinine statements so that those who wish make
> see the light.

We are still waiting for this humour... Adell is invited to commence with
his humour at any time.

>And that light is even if the 10 biggest countries decide to eliminate all CW
> requirements, the 11 smallest can force the issue and the code will remain. Then what,
shall
> we blow them all to kingdom come??? I think now

Somehow, I am not at all surprised that is what Adell would recommend
violence, seeing that veracity is not one of his strong points. But of
course, I am being sarcastic.

ARRL Bulletin 58 ARLB058
From ARRL Headquarters
Newington CT September 5, 1996
To all radio amateurs

SB QST ARL ARLB058
ARLB058 Comm emergency declared

The FCC has issued a voluntary communications emergency declaration:
All amateurs are requested to cooperate by recognizing the existence
of a voluntary communications emergency in North Carolina and
therefore relinquishing the use of frequency 3923 kHz plus or minus
5 kHz, for handling emergency traffic resulting from Hurricane Fran.

The FCC also issued a voluntary communications emergency declaration
for South Carolina, recognizing 3993 kHz plus or minus 5 kHz for
emergency traffic.

The ARRL Letter
Electronic Update
September 6, 1996

IN THIS UPDATE:

* Emergency nets activated as Hurricane Fran approaches
* Fran delays SAREX mission STS-79
* CAC studies new Novice/Tech contest
* Solar flux to rise
* W1FZ and wife honored
* John P. Alexander, K6SVL, SK
* In Brief: Cover plaque winner; Wohlers has e-mail;
Welcome; Microwavers confab; Cushcraft winner;
Ham Explorer winners; Thruway hamming;
DXCC update

EMERGENCY NETS ACTIVATED AS HURRICANE FRAN APPROACHES

As Hurricane Fran approached the southeastern coast of the US, South Carolina section manager Mike Epstein, KD1DS, reports activation of an ARES/RACES net on 3993.5 kHz with the state SSB net serving as backup on 3915 kHz.

In North Carolina, section manager Reed Whitten, AB4W, reports that the Tarheel Emergency Net is convening on 3923 kHz. The amateur station at the state EOC in Raleigh also was to be staffed as of Thursday at noon.

In Georgia, SM Dot Fennell, KA4HHE, reports that the state SSB net will meet on 3975 kHz.

In Virginia, SM Chris Wright, KD4TZN, reports that the state emergency nets Alpha and Bravo will meet on 3910 kHz and 3947 kHz, respectively.

Hurricane Watch Net manager Jerry Herman, N3BDW, reports that the net is activated on 14.325 MHz in coordination with the National Hurricane Center station, W4EHW, in Miami as the storm approaches landfall.

Joe Schmidt, W4NKJ, coordinator, reports that National Hurricane Center station W4EHW was active and accepting the meteoroligical data from amateurs within 300 miles of the storm center, including measured wind speed as sustained for one minute, gust speed and barometric pressure. Send information with time and origin of report to w4ehw@fiu.edu, http://www.fiu.edu/orgs/w4ehw, via the Hurricane Watch Net or other nets.

Amateurs are advised to monitor storm nets but to not transmit on net frequencies unless directed to do so by net control stations. Emergency traffic takes priority over health and welfare traffic. Amateurs are advised to handle health and welfare messages originating in the affected areas first. Amateurs are further advised to refrain from sending inquiries into affected areas until such time as amateurs in these areas have indicated their ability to process them.--Rick Palm, K1CE

HURRICANE FRAN CAUSES SECOND STS-79 POSTPONEMENT

As a precaution, NASA managers earlier this week moved the space shuttle Atlantis back to the vehicle assembly building, as Hurricane Fran headed toward the US coastline. The move marks the second delay for the start of the STS-79 mission, which had been set to launch September 14. The change in plans means that scheduled Shuttle Amateur Radio EXperiment (SAREX) contacts will be postponed. Matt Bordelon, KC5BTL, of NASA, said the new mission launch window is September 16-18, but the actual date will depend on the whims of Hurricane Fran.

The postponement also means astronaut Shannon Lucid, who's been aboard Mir since March 1996, will have to spend a few additional days in space. Even without the hurricane extension, Lucid continues to break and set world space records. As it stands, today she'll double the old Skylab space endurance record of 84 days (broken last year by astronaut Norm Thagard). Tomorrow, she'll break the world woman's single-flight duration record set in 1995 by Yelena Kondakova. Now clearly within reach is the duration record for longest-ever non-Russian space traveler, set earlier this year by Thomas Reiter at 179 days 1 hour 42 minutes. Shannon will break that record on Tuesday, September 17, at 0955 UTC.

Bordelon said Lucid is not concerned about the schedule setback. "She won't begin counting down the days until they launch," he said.

STS-79--a nine-day flight and the fourth Mir docking mission--encountered its first delay in July, when NASA decided to replace the reusable solid-rocket motors on Atlantis. Hams aboard Atlantis will use SAREX configuration M, which is FM voice, using the shuttle-Mir 2-meter radio.

Three hams will be aboard STS-79. Jay Apt, N5QWL, a mission specialist, has flown on three previous shuttle missions and used Amateur Radio on each flight. Carl Walz, KC5TIE, participated in SAREX from Columbia during STS-65 in July 1994, before earning his ham ticket. Making his fifth shuttle mission is John Blaha, KC5TZQ, a mission specialist. During STS-79, Blaha will switch places with Lucid and remain aboard the Mir space station for 5 months. Other STS-79 crew members include Commander William Readdy, Pilot Terrence Wilcutt and Mission Specialist Thomas Akers.

Three schools--two in the US and one in England--have been confirmed for SAREX QSOs during STS-79: Andover Middle School in Andover, Kansas; Immaculate Conception Elementary School in Celina, Ohio, and The Royal School for Girls in Surrey, England. The ham astronauts will also make random contacts with the amateur community as their busy schedules permit.

See the ARRLWeb SAREX page at http://www.arrl.org/sarex/ for more information.

CONTEST ADVISORY COMMITTEE STUDYING NOVICE/TECH EVENT

The ARRL Contest Advisory Committee is seriously considering the creation of a contest for Novice, Technician and Technician Plus class operators, tentatively dubbed Sprint NT. "Some of the basic rules have been hammered out within the committee, and we are in the process of seeking membership input to fine tune them," a CAC report notes. In general, the CAC is looking at these basic guidelines, subject to change:

* Time period would run from 7 AM Saturday to 1 AM Sunday EST.
* All Novice, Technician and Technician Plus frequencies may be used.
* Separate Novice and Technician winners would be determined.
* CW QSOs would count 6 points each; SSB/FM QSOs would count 2 points each.
* Multipliers would consist of ARRL sections plus one DX contact per band.
* Multipliers would count only once per band, regardless of mode.
* QSOs would count once for each band/mode.
* Only Novice, Technician and Technician Plus ops would be allowed to call CQ.
* Rules would include provision for an "Elmer" to help but not actually make QSOs.

Pending final approval from the ARRL Board of Directors, the contest could come into being as early as next summer. The CAC welcomes comments via e-mail to cac@arrl.org.

SOLAR FLUX COULD REACH MID-70S BY LATER THIS MONTH

Solar observer Tad Cook, KT7H, in Seattle, Washington, reports solar activity was up during the last week of August, and on each day, the daily solar flux was above the average of the past 90 days. The 90-day average also moved up a point from 70 to 71. Average solar flux was up 6 points from a week earlier, and average sunspot numbers were up 1 point.

Due to a recurring coronal hole, geomagnetic indices were unstable in late August and early September. Look for solar flux to drop below 70 around September 11, rise above 70 again a week later, and to the mid-70s around September 23. Moderately unstable geomagnetic conditions are expected to return then as well.

Sunspot numbers for August 22 through 28 were 12, 24, 22, 14, 16, 13 and 13, respectively, with a mean of 16.3. The 10.7-cm flux was 72.8, 74.2, 74.6, 74.7, 74.2, 74.3, and 73.3, respectively, for a mean of 74.

By the way, the Space Environment Center in Boulder, Colorado, declared July as the solar minimum month.

JIM THAYER, W1FZ, AND WIFE HONORED FOR $2 MILLION CONTRIBUTION

Jim and Beulah Thayer were honored for their generosity August 25, 1996, at a dedication ceremony for the new Farmington, New Hampshire, High School. Jim Thayer, W1FZ, a ham since 1921, and his wife donated $2 million toward the project. Several hundred area residents turned out to give the couple a

standing ovation and to present them with a watercolor of the new school. A bronze plaque at the new structure declares: "Erected through the generosity of James and Beulah Thayer. Dedicated to the Youth of Farmington, August, 1996." A picture of the couple sits above the plaque. The Thayers' donation helped to make the project possible without a tax increase. Jim Thayer was president of a local bank in Farmington and owned the local telephone company. He's a member of the Great Bay Amateur Radio Association.--Arthur Westneat, W1AM

JOHN P. ALEXANDER, K6SVL, SK

John Alexander, K6SVL, of Rancho Palos Verdes, California, died August 30, 1996, of cancer. He was 73. John was the Southwestern Division representative to the ARRL DX Advisory Committee. He was active in local clubs and was a past president of the Southern California DX Club. Upon learning of John's passing, Southwestern Division Director Fried Heyn, WA6WZO, said, "We have lost a great ham."

In Brief:

* Cover Plaque Winner! Eugene F. Ruperto, W3KH, won the August 1996 QST Cover Plaque Award for his article, "The W3KH Quadrifilar Helix Antenna."

* Wohlers has e-mail: ARRL ham radio insurance administrator Albert H. Wohlers & Co now can be accessed via e-mail. To request a brochure, use info@ahw.com. Send customer service questions to cusv@ahw.com.

* Welcome: The new ARRL Regulatory Information Branch supervisor is Tom Hogerty, KC1J, formerly the assistant contest manager. He replaces Norman Bliss, WA1CCQ, who recently completed his masters degree and accepted a position as a school librarian. Al Gordienko, KF2FB, has been named as the new assistant contest manager. He'd worked previously in ARRL/VEC.

* Microwavers Confab: Microwave Update 1996 will be held in Phoenix, Arizona, October 4-6, 1996, at the Ramada Camelback Hotel. The technical program will be devoted to frequencies above 902 MHz and will include microwave test equipment, low-noise amplifiers, TWT power amplifiers and other pertinent microwave topics. A microwave flea market will be held Friday and Saturday nights. Noise figure measurements through 24 GHz and dish feed-horn gain and pattern measurements also are planned. A microwave equipment auction is planned for Saturday. Conference registration is $40 prior to September 22, or $45 at the door. Hotel reservations at the Ramada are available by calling 800-688-2021. For more information, contact Jim Vogler, WA7CJO, 2540 E Heatherbrae Dr, Phoenix, AZ 85016; tel 602-954-0541.

* Cushcraft Winner! Ernest Lester, VE2AVX, of Quebec was the winner of the Project Gold drawing sponsored by Cushcraft at the 1996 Dayton Hamvention. At an award presentation at Cushcraft headquarters in Manchester, New Hampshire, Lester picked up a 24-karat solid gold coin plus the first antenna in Cushcraft's Project Gold series of VHF/UHF mobile antennas. He also got the 25-cent tour of the Cushcraft plant.

* Ham Explorer Winners: Hams were among several 1996 award winners at Explorer Post 73 in Worcester, Massachusetts. Among its activities, the post provides communication for local parades and road races, including the St Patrick's Day and Columbus Day parades and the Boston Marathon. Among the winners were Matthew J. Norgren, N1VKH, Explorer of the Year; Dustin P. Robinson, N1XBV, Outstanding Achievement; Kathryn M. Leonard, N1WBF, and Matthew J, Norgren, N1VKH, Theatrical Awards; and Michael R. Borelli, N1VKG, Trailer Project Award. Roger D. Demers, NE1C, and Brian G. Arsenault, N1FIY, received Explorer Leadership Training Certificates. Post 73 is part of the Mohegan Council of the Boy Scouts of America.--Franny Moy, W1SPG

* Thruway Hamming: The New York State Thruway Authority plans to place ARRL Amateur Radio recruitment brochures at rest stops along the toll highway.

* DXCC Update: The DXCC Desk reports the number of unprocessed applications at the end of August was 464 (27,814 QSLs). The desk received 376 applications (27,400 QSLs) for endorsements and new awards during July, and 655 applications (36,367 QSLs) during August. During August, DXCC Manager Bill Kennamer, K5FUV, traveled to Tokyo, Japan, where he checked DXCC cards at Ham Fair. Kennamer returned with over 200 DXCC applications, representing over 14,000 QSLs. Applications being sent out at the end of August were received a couple of days earlier. A few applications received prior to that time were waiting for paper records to be converted, or were being audited.

> their own two-way equipment, and now we are putting them in charge
> of deciding what is legal and what is not?

No, were not. They have never been in charge of whats legal or what
isn't,
they simply inforce the laws, they don't make them.

> I don't know about you, Gary, but I don't have the time or money to go
> to court to prove that I am a ham and was running a legal station.

Did you ever consider that the state must prove that YOU were the
interfearing station? Or did you think the officer was going to ask you
to cough up some cash on the spot?

> I do not want my HF linear amplifier confiscated
> and have to go through to court to get it back.

The bill as proposed made no mention of confiscation.

> Police officers who are technically qualified to judge what is causing
> the problem would probably make more mony if they used that electronic
> knowledge in another job relating to that field.

What ever that means... Police have never been trained to interpret the
law, only enforce it.

By the way, did you read this part:

> > preclude concurrent action by the Commission. Nothing in this
> > subsection shall be construed to diminish the Commission's
> > exclusive jurisdiction over radio frequency interference in any
> > matter outside the scope of this subsection.'.

In other words, the FCC is still the boss. If they would allow local
police to fine your legal station then it doesnt matter if the bill
passes or not right?

Tim, ka8ddz

I've been licensed 4 and a half years, although I've been around amateur radio for over 12 years (my wife's father and two brothers are all hams, licensed for decades). I'd say I operate 40% CW, 40% SSB, and 20% FM/ packet. I spend most of my CW time in the novice sub-bands, helping new hams get their code speed up-to-par

Hi, thanks for reading this.

I'll be vacationing on St. Martin later this winter, and I'm looking for some advance information and advice.

I already have my French license (I'll be staying on the French side of the island) and my Dutch license should be on the way. I know the French side is 220 volts/60 Hz, and the Dutch side is 110 volts. And I see there's a repeater on 146.76, according to the repeater directory.

OK, that's all I know so far. What can you fill in? Specifically:

How well does the repeater cover the island?

Do they mind English on the repeater? Do the locals speak English to visitors on the air? (Are there any locals on the air?)

I have an Icom 706, but the power supply is a different matter. I'm thinking of shipping one rather than carrying one on the plane (a supply with 220 volt primary taps). Suggestions on shipping?

Oh, yeah... this is a vacation, not a DXpedition, so any more general tips on things to see and do (our hotel is just above a "clothing optional" beach, but I might be able to squeeze in time for other stuff).

Thanks in advance and 73,

Wrong. The US military (e.g. US Army Special Forces, USMC, etc.) and various intelligence agencies all still use CW and probably will continue to do so, but the people you find in these kinds of activities are the cream of the crop and are highly motivated individuals who apply personal skills to communications solutions instead of always relying on some kind of appliance. Fortunately for us, they haven't applied "dumbing down" to their activities yet.

> To answer your question, yes, we should base what the ARS does on what
> happens in other services.

Wrong again. The Amateur Radio Service (ARS) is NOT the other services and what we do is independent of what they do.

If the ARS is merely a duplication to benefit hobbyists, and that's exactly how the powers that be at the FCC are beginning to perceive us now, it is doomed. We were once considered a National Technical Resource (FCC Rules, Part 97, Section 97.1[e]), but with every store-bought transceiver and every licensee who enters the ARS who truly has no idea what is going inside the cabinet and really doesn't care, the further we're getting away from that and the closer we get to the end of the line.

>Whatever happened to "developing the art"?

It's still out here, but it's becoming harder and harder to find, thanks at least to partially to qualifying for a license through rote memorization and the conversion to an Amateur Service that is only interested in buying expensive toys that more closely resemble a Walkman or a stereo set than a piece of communications equipment. Some claim that operating digital modes is "developing the art" as you call it, but where's the "art" in buying an box and plugging it into a PC that 's loaded with software to do all the work? Absolutely all it takes is an ability to read the box's instruction manual. Virtually the same is true with space communication except it's usually just more expensive. The bottom line is that adopting pre-assembled commercial technology simply doesn't qualify.

There's one place I know of for sure where Amateur Radio is alive, well, and thriving. Try QRP. However, if you do, you'll have to join a "cream of the crop" fraternity that tries hard to do more with less, both operationally and technically, but (shudder!) you may have to learn to operate CW! It seems that's the only mode that does well at power output levels under a watt.

2473. A *VERY* SCARY SCENARIO

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-05 00:00:00 UTC
From: Patrick Cook <pcook@dimensional.com>
Message-ID: <Pine.SUN.3.95.960905210142.4404A-100000@nova.dimensional.com>
Source record: 217571
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

Hello everyone:

I just got off the phone with my mom, who's a home-shopper turned scanner-buff, and what she described to me (IF this indeed happened the way she described it to me is EXACTLY what happened).

From what she told me, this is what happened. Keep in mind that I know NOTHING of the particulars of this incident other than what she told me:

There's an automobile accident at Colfax and Osage (here in Denver, Colorado). As a result, EMS personnel are dispatched to the scene (When I refer to EMS personnel, this covers police, fire, and paramedics unless otherwise noted). This call goes out over EVERY scanner in the area to ANYONE with a scanner in their hands. EMS people arrive on the scene and do their thing.

What caught my mom's (and later mine) ears was when some Fire Department personnel said (again according to her accounts of this incident) something like "There are too many hams listening to us. Switch to Channel 2" (or whatever channel they went to for simplex, on-scene communications).

What's so scary about it, you say??

Think about it. Why would *ANY* EMS person want to switch to another channel because "there are too many hams around"??? After thinking about it, it occured to me that there were either some nosy scanner buffs (who were NOT hams) around who were doing things they weren't supposed to (such as getting in the way), or there were *indeed* some hams who went into "scanner-buff" mode and FORGOT TO BE AT LEAST SEMI-PROFESSIONAL BY *YIELDING* TO THESE PEOPLE _SO THEY CAN *DO THEIR JOBS*_!!!!!

If the former was the case, then whether they realize it or not, THEY ARE GIVING US HAMS A BAD NAME!!! If the LATTER is true, then we need to do some SERIOUS re-training as to what IS and IS *NOT* allowed while watching rescue operations.

I say this because there IS a difference and that difference is one that has to do with LIFE AND DEATH!!! In other words, by watching from a distance and NOT interfering with these people and their abilities to do their jobs CAN make the difference between someone LIVING and someone DYING!!!!

Now, of course, it *is* possible that some hams either were involved in the accident ITSELF or *WITNESSED* the accident. This happens, BUT in either case, there *IS* a difference between a ham BEING INVOLVED (either as a victim or a witness) and being just an average, ordinary person who simply has nothing better to do than to give EMS personnel a hard time and

giving ham radio a BAD name in the process.

I think we sometimes need to remind ourselves that there are some hams who are having to fight "anti-scanner" laws EVERY DAY!!! In fact, someone can correct me if I'm wrong, but Greg Godsey from Christain County, KY, is STILL fighting to keep *HIS* _LICENSE_!!!

And I know that MANY scanner clubs (such as Mountain NewsNet) have STRICT policies regarding members approaching EMS personnel OR interfering IN ANY WAY with their abilities to do their jobs (INCLUDING TO, BUT NOT LIMITED TO approaching the automobiles involved).

PLEASE DO NOT GET ME WRONG!!! I like watching EMS rescue operations just as much (if not more so :)) than you do, BUT when *I* watch EMS personnel, *I* do so from a distance where I can get a clue as to what is going on *WITHOUT* getting too close to the point where I actually *INTERFERE* with said rescue operations.

THAT is how it is *SUPPOSED* to be done!!!

As far as promoting ham radio goes (which is why the Fire Department publicly complained about hams being around in the first place), it be noted that MANY public safety agencies around the country (i.e. the hams who happen to work in this field) have put up repeaters (such as the California Highway Patrol's 2 meter [?] repeater).

Here in the Denver Area, the hams who work in the Denver Police Department have put up a repeater on 147.300 Mhz. (+) (K0LF/R) (No PL needed). I'm sure that other public safety agencies around the country have done something similar.

Now that we have their trust: LET'S *NOT* _ABUSE_ IT!!!! We all know what happens when we abuse things in this hobby.

In short, SCANNER MONITORING SHOULD BE A HOBBY---NOT AN OBSESSION OR REASON TO DO SOMETHING AS STUPID AS INTERFERING WITH EMS PERSONNEL IN THEIR EFFORTS TO *SAVE LIVES*!!! Because the next life they have to save could be *YOURS*!!!!

Rob (moderator for aresco), I know I'm ranting, but I think it's worth it considering the fact there MAY have been some hams who MAY have done the Amateur Radio Service (as well as themselves) a DISservice, IMHO (especially with the "Little LEO" folks and other commercialized SIGs breathing down our necks and salivating just to get just a piece of our PRECIOUS bands)!!!

Sincerely,

Patrick Cook, KB0OXD
Denver, Colorado

2479. American Society of Civil Engineers Initiates Tower Failure Survey

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-05 00:00:00 UTC
From: jherman@Hawaii.Edu
Message-ID: <50n64r$aeb@news.Hawaii.Edu>
Source record: 217577
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

The following is from rec.radio.broadcasting. If you redistribute (which James encourages), he would like to know to when you did so, and to whom.

Jeff KH2PZ

In article <5033j5$6jn@miso.wwa.com>, James Cohen <JCCPC@msn.com> wrote:

The Committee on Telecommunications Facilities (CTF) of the American Society of Civil Engineers (ASCE) commenced a survey of telecommunications tower performance earlier this year. CTF hopes to distribute the survey form as widely as possible. Results will be published yearly through ASCE and other organizations.

The intent of the survey is to determine what problems exist, how severe these may be, and where to focus effort for eventual improvement with regard to freestanding and guyed towers, cable arrays and monopoles. As data is collected, technology changes and systems age, it is anticipated that the answers to these questions will continue to evolve.

The importance of contributing to the survey cannot be overstated. There is currently very little centralized source of data on problems related to telecommunications towers, notwithstanding strong anecdotal evidence of continuing difficulties by owners and users of these structures. The committee hopes to present a preliminary set of results in April 1997.

The purpose of the survey is to determine any need for improvements in current design, construction and maintenance practice for freestanding and guyed telecommunications towers and similar structures. This will be done through an assessment of perceived functional losses by owners and users. Included in "functional loss" are collapses; loss of signal strength; transmission or reception failure; excessive, difficult or unreasonably costly maintenance; or other unsatisfactory performance of the structures, as perceived by the owner or user. Collected data will be used to focus on those areas requiring improvement in the design and construction of telecommunications towers, thereby permitting the preparation of written recommendations to enact those improvements.

The committee's mission statement includes the advancement of knowledge of, encouragement of research on and evaluation of methods of analysis, design, erection and materials utilization for telecommunications and related facilities and their components. This applies to both new and existing structures. Additionally, CTF is responsible for developing specific criteria or code proposals for their design, analysis, maintenance and construction based on these results.

Committee objectives are to provide a manual of guidance for the design, analysis, maintenance and construction of free-standing and guyed towers, earth satellite stations and their components. The use of these facilities can include microwave or long wave transmission/reception, radar facilities, or other uses.

The survey is an unfunded voluntary effort by the members of the ASCE committee, which is divided between consultants, manufacturers and users. Although the numbers and types of problems determined by the survey will be available to the public, names will not be released and sources of information will be kept confidential.

Copies of the survey may be obtained from James Cohen, PE, Chair of CTF, via Internet at jccpc@msn.com or by writing to James Cohen Consulting, P.C., P.O. Box 130, Pennington, New Jersey 08534-0130. The survey has also been posted at the National Association of Broadcasters website http://www.nab.org/scitech/files/scitech.htm and is also hoped to be distributed by the Society of Broadcasting Engineers.

>> Should area gun owners all get automatic weapons now because the local
>> police are?

>You disappoint me.

This should *really* disappoint you, John:

My "Why ham radio is not dependant upon what happens in other services" file:
*We ragchew for hours, the other services don't
*We install rptrs that duplicate coverage of already existing rptrs just
for ego sake, others don't
*We use rptrs when simplex would suffice, others don't
*We have on-the-air contests, others don't
*We bounce signals off the moons (EME) just for fun, others don't
*We purposely reduce power (QRP) for fun, others don't
*We have antenna measuring contests, others don't
*We work meteor scatter just for fun, others don't
*We build and modify radios for fun, others don't
*We go to swap meets and bargain for junk, the others don't
*We have radio club meetings, the others don't
*We think of radio as a hobby, the others don't
*We have DXpeditions, the others don't
*We carry HTs in our belts to look official, the other services don't
*CW is our most second used mode on HF, not so with the others
*We still use AM on HF, the other services don't
*We have antenna restrictions imposed upon us by neighborhood boards, others
don't
*We work SSTV, the others don't
*We debate on the radio newsgroups, the others don't

*(still under construction)

If you actually believe that passing huge files of data via the digital modes that most hams will never read is efficient communication then you've got to quit hitting the bottle.

But if you want to be like the other services, John, then join them. The Army and Navy will certainly train you to work their gear. Their mission is *very* different from ours, though.

Jeff KH2PZ / KH6

We took our license exams around the same time, Karl; recall the exams at the San Francisco office were also multiple guess. The commercial tests were also multiple guess. Answer books were available back then for both, too.

You shouldn't try to elevate yourself above others - that only increases the hostility the young pups, like Spew, feel towards the OTers.

And beginning with the commercial production of amateur gear many (most?) hams have not had a good working knowledge how a radio works. We gripe and complain about today's new hams but if you go back and read the QST editorials from the 20s and on, and you'll realize there is really nothing new under the sun.

I would venture to guess that of those radios still being built at home, more are being built for CW use than SSB, FM, ATV, RTTY, digital, et cetera. I make this judgement based on what appears on the QRP and GLOWBUGS lists (Glowbugs is devoted to homebrewing tube gear).

Still trying to elevate yourself above coded hams, Karl?

I would venture to guess that most folks on here have done some rather interesting and important work in their professional lives, too, Karl; when we receive a paycheck we can do some marvelous things. But our hobby is not titled the Professional Radio Service, but rather the AMATEUR R.S. I don't receive a check for each radio I build - I homebrew for the love of it.

How much of the gear you use daily on the air did you build yourself, Karl? Maybe you can scan a photo of it so we all can see your homebrewed state-of-the-art radios.

THE GRAND RAPIDS AMATEUR RADIO ASSOCIATION
Presents

SUPER SWAP '96
Saturday, Sept. 28, 1996
At Unity Cristian High School in Hudsonville, MI

Seller setup at 6AM, General entry at 8AM.

Buy and sell new and used Amateur and Computer
equipment and Software. Pick up that bargain
you have been waiting for. Sell or trade that
equipment that is just laying around the shack.

Tickets are $4 in advance 5$ at the door. Tables
are $8 each. Make sure to reserve yours, they are
selling fast.

Directions: Unity Christian High School is located at
3487 Oak St. in Hudsonville, MI. From M-21 (Chicago Dr.)
Head north at 32nd Ave, Turn left to Oak St. From
I-196, use Exit 62 at 32nd Ave, Go 1.4 Miles to Oak St.
and turn left to the school.

Talk In 147.260 & 444.4 CTCSS 94.8 The W8DC Repeater

For advance tickets or table reservation contact,
GRARA, C/O SuperSwap '96, PO Box 1248,
Grand Rapids, MI 49501 or
Call Dave Devos at 616-698-7022

Why are some people so concerned about removing the morse requirment because of the "threat" that other services will take our spectrum? I know of no such threat to the HF spectrum. The spectrum being threatened is that spectrum already available to "no code" license holders. So get on up there and "develop" and "grow" and "use" to your hearts content.

Why are the majority of packet stations still using archaic 1200 baud, when all those "technically expert" no-code technicians are licensed up there? Compared to the state of the art, morse is no more outdated than 1200 baud packet. Why aren't these self-proclaimed technical gurus running the "high speed digital modes" on VHF/UHF they say they would implement on HF, if only it weren't for the code testing requirement keeping them out? I think those 56KB high speed digital modes would be less of a technical challenge on UHF than HF. Faced with the challenge of upgrading the archaic packet modes on VHF and UHF, I'm surprised that any of them would even give a moment's consideration to HF. They should be too busy implementing all these technical breakthroughs they are keeping up their sleeve until the morse requirment is eliminated.

When they prove they can accomplish these wondrous "high speed digital" feats on UHF/VHF, they might be able to convince me they have a shot at

pulling it off on HF.

I think you have summarized the problem with CW requirements.
CW could be fun to learn, if CW is your motivation. For many
new hams, myself included, learning CW is a bitter pill to
swallow to achieve voice SSB priveledges.

If CW requirements were restricted to the CW only bands,
the distate for CW would disappear. If one wanted use
of CW bands, one would have to pass the CW test, no need for it on
voice bands.

>wasn't even in the house!"

Indeed, that would seem to be a highly satisfactory state of affairs.
What was the original purpose of Dx awards anyway? As I understand
it, the purpose was to act as incentive for amateurs to upgrade their
stations and technique so as to improve their effectiveness for relaying
messages. Remember the American Radio *Relay* League? That's what they
were about, relaying traffic, and the further each individual link in
the relay chain could successfully operate, the faster a message could
be delivered, because fewer stations needed to handle it. Hence the Dx
programs.

Today, most amateur message relay is automated, so why shouldn't competing
for Dx awards be automated as well? It would continue to serve its original
purpose of improving the stations and technique of amateurs in a relevant
way. That said, however, use of non-amateur means to enhance scores would
be counterproductive to the objective of the competition. So use of the
internet to schedule contacts would appear to be a bad idea. Use of things
like the PacketCluster, however, which are purely amateur networks, would
seem to be entirely in keeping with the purpose of the Dx award programs.

>I put in a run of PVC electrical conduit so I can pull new cables as
>needed. The cost of PVC is cheap compaired to the house. Bigger is
>better.

This is an excellent plan. Install at least one conduit, and preferably several, as large as will fit in the wall, now. Put a good quality rot proof pull rope in each conduit. You *will* want more wires later, and you *will* have to replace existing coax from time to time. Terminate each end with a bulkhead panel. This can also serve as your station single point. Use panel mount suppressors as feedthroughs.

Also now is the time to install the phone system wiring the *right* way. Don't daisy chain your phone wiring, star connect it back to a central wiring closet (do the same with CATV wiring). Make sure you make provisions for *plenty* of outlets. When your wife decides to move the furniture, you don't want to have to string cords across the room to reach an outlet. And if you add a second or third phone line later, it'll be a cinch to assign it to the proper outlets by just changing a wire on the punchdown block in the wiring closet. This will cost very little extra now, but it will save huge amounts of aggravation later.

And now is the time to make sure the ham station is on its own power subpanel, installed *in the shack* adjacent to the coax entry bulkhead. You *will* want more power some day, perhaps to run that linear you've dreamed about, and you *do* want to be able to ground window your station for lightning protection.

Hi Charles,

I appreciate your candor. You come right out and say, you want HF
priviledges, but don't want to learn morse to get them. That is an
honest objection against learning morse. I felt the same way as you
once.

As a young boy back in the fifties, I wanted to be a ham very much, but
did not know morse, and personally, resented having to learn
it to get what I wanted: to work AM (it was before SSB was common). I
hated it, fought it, but finally gave in and learned it.

I would never have learned morse if I hadn't been required to do so. I
would have missed out on one of the greatest delights of ham radio if I

had been allowed to get on the air without it. It is a fact that some things you only come to appreciate through experience . . . but that fact is something you also only learn through experience.

Morse has a huge following in amateur radio, so knowledge of it should continue to be a testing requirement.

73, and good luck,

Jim - AD4VL

I don't suppose you know any police officers. Maybe, if you ever
get a chance to meet one in a casual situation, ask the officer
how many times they get lied to. You might be surprised - there
are a great many people out there that lie to police officers, so
police officers usually have to guess at what the truth is.

>I think it is great to help get the CB problem into local hands more inclined
>to use it for a revenue source.

That is a pretty naive perspective.

2502. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-06 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <50pj8h$c9e@lyra.csx.cam.ac.uk>
Source record: 217366
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to many hundreds
of lines I here post a brief sample.

Following discussions last year the full collection is not
now posted to alt.usage.english (but see below for how to
obtain a copy by FTP).

Brian Kelk bck1@cl.cam.ac.uk
6 September 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1955 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet:

Anton Berta Caesar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle

Richard Siegfried Theodor Ulrich Viktor Wilhelm Xanthippe
Ypsilon Zacharias

A"rger O"konom Schule U"bel

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details and more alphabets see the full list, which
is posted at intervals to sci.lang, rec.radio.amateur.misc
and rec.radio.info; it is now also crossposted to various
*.answers groups. On the World Wide Web you can find copies
of the postings and some further material at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

The main posting is also available at:

You can receive INMARSAT-A quite easily with an R-7000/R-7100 type setup. I use a 1 Meter dish with a dipole feed (don't really need circ with the gain I have). This is connected to a 34db pre-amp (sub 1db noise fig) at the feed and drives the R-7100. The "A" voice channels are quite intelligible using either the Narrow or Wide FM selection on the receiver.

The easiest way to align a system live on the bird is using the AFRTS Feed on 1537 Mhz (1.537 Ghz). It is always active and to my knowledge the only way the general public can receive AFRTS. This is how the Navy gets the Armed Forces Radio and Television audio feeds to the ships worldwide. To my knowledge all the birds have this feed. I have personally verified that AOR-W and AOR-E (Atlantic Operating Region East and West) birds have this feed active.

Well, don't look for a horizon to the South or East, either.
It's just a question of which mountains you mean. Is Griffith Park
or Mount Hollywood part of the Santa Monicas?

2506. Amateur Radio gets good press in AZ

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-06 00:00:00 UTC
From: n7ory@primenet.com
Message-ID: <50pmpf$nht@nnrp1.news.primenet.com>
Source record: 217370

Durring the 10pm news on channel 10, KSAZ TV here in Phoenix, Arizona, they had a brief report on Amateur Radio and Emergency Volunteers envolved with Hurricane Fran.

For the most part, this segment was 80% Red Cross, and 20% Amateur Radio. However, the information given was supportive and affirmative toward Radio Amateurs and the invaluable service that they provide to their communities.

It featured a local op, with his rig tuned to 14.335, discussing aspects of the service to a reporter. An station could be heard from the rig thanking another operator for some information he received. The message given was that when regular means of communications go down, Amateurs are the only reliable means of communications in and out of troubled spots.

It is good to see such press in light of recent events here in the valley, such as the 3 guys busted in Mesa, and the recent NAL issued to Tim Hoffman in Phoenix.

My thanks to KSAZ and the volunteers that brought this about.

I have been a ham for 30 years now, and have always enjoyed CW. I was eligible to join QCWA at the "old" age of 43, and did join last year.

I have enjoyed CW so much over the years, that I recently became a low-power (QRP) enthusiast and joined several QRP clubs as well as FISTS, a society for the preservation of code. With the QRPers it's almost all done with CW, plus these folks hold good operating procedures in high regard. This is also one of the last enclaves of homebrewing, something I've enjoyed through many a Heathkit.

In our club, we have a few new hams who are upgrading, and I don't hear them complaining about learning the code. It may help that we offer code and theory classes at the clubhouse every Wednesday evening, and have set up a Technical/Operations Committee to introduce newcomers to contesting, DXing and VHF weak-signal work.

I would be willing to go for a no-code (or maybe 5 wpm; that isn't asking that much) HF license, provided that there was no encroachment on the CW portions of the bands, ever. My own theory is that, when the phone bands become even more crowded, human nature says that there will be a grab for the CW portions of the band.

: I'm having trouble interpreting (as usual) what the government means here.
: Does this mean I'm restricted to my call area of my address? I thought that
recommendation
: got denied and you could apply for a call sign in any area 1- 10....which may be what
this
: statement means.

Yes, you can apply for any available callsign in areas 1-10, if you live
within the 48 contiguous states. The intent was to keep us "mainlanders"
from applying for callsigns intended for Alaska, Hawaii and the US
possessions and territories, which are already in short supply.

A couple of Extras at the local club got their former callsigns, one from
5-land and one from 7-land, even though they live here in the 6th call area.

Does anyone know where I can find more information regarding
ionospheric cross modulation (also known as the Luxembourg Effect).
This is the transferring of the modulation from one transmission to
another in the ionosphere. First noticed in the 1930s and generally
MWstations onto LW - or is it the other way around?!!
Thanks,
Ian

Dave,

I had a license when I was a kid (I'm 49 now) and I never got my
general
because I didn't want to take the time to get to 13wpm, *I wanted to
talk
on the radio*. I operated some cw till the license expired. When I
decided
to get back into ham radio last year I had to start from scratch to
learn the code. I got my tech plus and spent hours on HF CW and had a
blast. It
was relaxing and the people I met were all friendly. I had some great
conversations (sore wrist for days) and felt like I had learned a new
language. When I went for my general I tried the 20wpm as a warm up and
to
my surprise passed it!!

Now I work all modes and don't do CW as much but it is still a good
friend.
If I can't find a QSO on Pactor RTTY or SSB because of poor conditions
I
can almost always get things going on some band on CW. To this day I
have
not met a rude person on CW. I had to learn it and probably would not
of if
it wasn't required but now I really glad that I did. I'm not inferring
that
it should be or shouldn't be a requirement but I feel there is a lot to
be
said in favor of the mode.

I am looking for some info on freq counters. Are there differnet types? Do some only check freq on TX? Is the Rat Shack model any good? It had a telescopic antenna. Could a probe be connected on to this jack and used in internal componets in a radio? How far away do the ext. antenna kind work? I've seen some that are part of a power,mod,rf meter. Are these any good? This would only work on TX, right? Thanks for any info.

Source record: 217382

Since most of these conversations seem to start with a tone
of "Put away the gun, and we can talk", it is nice to see
your thoughtful question.

Personally, I enjoy the use of Morse, and in fact was
initially drawn into amateur radio (in the 1950's) by
the idea of conversing with distant places in a sort
of "secret code". Perhaps this was a function of my
rural upbringing in the piney-woods, but the "romance"
of faraway places (even after 21 years as a blue water
sailor) still grabs me.

Yes, I know you can talk to "far away places" on phone,
digital, and even visual modes, but somehow a whispery
thin Morse signal adds to the "ambience". Yes, in
many cases the conversations are painfully slow, but
maybe that also is part of the attraction.... it tends
to focus your thinking down to topics which reflect
what you feel is "important" about yourself (age,
how many kids, etc.).

Before I joined, I bought QST at Barnes&Noble and at the tobacco-shop at the mall and at the Out of Town News kiosk in Harvard Square. Non members do receive it, they just can't subscribe unless they're a library, under combined IRS/Postal regulations which would render the magazine a taxable subsidiary.

I would like to see a list of the other 7 proposals... not that I think they need to survey us on our thoughts on the Little LEOs (one could wish they had before calling for a hate-mail campaign, which might convince Uncle Charlie to yank some spectrum to give us a spanking).

Actually in Canada anyways, you have only to learn 5wpm for 80m & 160m.
Plus 2m allmode you can work all different sorts of modes. But I agree
for REAL HF privileges you need CW

I would beg to differ, especially as regards the constant attacks that
I read here and in Fidonet.

I think what you say may be true on the air, except for certain
frequencies, both HF and VHF, but the bulk of the messages in here
portray something completely different. In fact, I find the attacks
and slurs here reprehensible. It makes me ashamed to be associated.

I also enjoy CW immensely. As my personal preference it's my favorite mode, although I do a little of everything except ATV. (And I'm interested in that too.)

I could copy 55 wpm about 25 years ago. Then I had about a 15 year hiatus from ham radio (still licensed but inactive.) When I got back on I was pleased to find out I could still copy about 40 wpm with no trouble! A couple months and I was back up to 55 wpm. (I guess I classify as an OLDE FAHRT even though I'm only 43; I've been licensed 29 years.)

Some of my most memorable QSO's have been on CW; the 6-hour ragchew to classify for the "Real Ragchewer's Club" (Is that still around?) and intriguing chats with DX stations that led to a greater appreciation of their culture. Some of my greatest thrills were hearing my call being sent in CW on "new bands" for me such as 1296 and 2304 MHz. I have also heard the weird amd fascinating sound of my own distorted CW signal coming back as an LDE on 20 meters.

So for those of us that enjoy it, let's keep using it! See you on the bands!

SB PROP @ ARL $ARLP037
ARLP037 Propagation de KT7H

ZCZC AP57
QST de W1AW
Propagation Forecast Bulletin 37 ARLP037
From Tad Cook, KT7H
Seattle, WA September 6, 1996
To all radio amateurs

SB PROP ARL ARLP037
ARLP037 Propagation de KT7H

Solar activity was down only slightly last week compared to the week previous. Average solar flux and sunspot numbers were each down about a point. Solar flux peaked on the last day of August at 76.2, the highest value since August 4.

Geomagnetic activity quieted down during the week after the disturbances at the end of the month. Quiet conditions should continue until September 19, with the possibility of disturbances peaking around September 25.

Solar flux should decline and drop below 70 after September 10, and rise above 70 again about a week later. It should peak again around the mid seventies around September 23 or 24.

Sunspot Numbers for August 29 through September 4 were 20, 16, 26, 11, 13, 11 and 11, with a mean of 15.4. 10.7 cm flux was 73.5, 73.3, 76.2, 73.5, 72.3, 71.2, and 70.8, with a mean of 73.

This week we are doing a path projection for the All Asia DX Contest from some points in the United States to Japan and Central Asia.

From the East Coast 80 meters looks good to Japan from 0930z to 1030z, and fair to Central Asia around 0000z. 40 meters looks good to Japan around 0930z to 1130z, and to Central Asia from 2330z to 0100z. 20 meters should be good to Japan from 2100z to 2300z, and to Central Asia around 1300z and again from 1530z to 1730z. 15 meters does not look promising, but to Japan check from 2130z to 0030z and Central Asia from 1530z to 1700z.

From the Central U.S. check 80 meters to Japan from 0900z to 1200z and 40 meters from 1100z to 1300z. 80 and 40 do not look good to Central Asia. Check 20 meters to Japan from 2100z to 0000z and to Central Asia from 0130z to 0200z and 1500z to 1730z. 15 meters

looks doubtful, but check Japan from 2130z to 0130z.

From the West Coast check 80 meters to Japan from 0900z to 1400z. Check 40 meters to Japan from 0800z to 1500z and to Central Asia from 1300z to 1400z. Check 20 meters to Japan from 0200z to 0630z and 2100z to 2200z and to Central Asia around 1600z to 1700z and 0100z to 0400z. 15 meters may have an opening to Japan from 2230z to 0300z.

From Alaska check 80 meters from 0900z to 1700z to Japan and 1330z to 1630z to Central Asia. Check 40 meters to Japan from 0730z to 1830z and to Central Asia from 1230z to 1830z. 20 meters may be open to Japan from 2000z to 1000z, but the best signals should be around 2000z to 2100z and again from 0600z to 0730z. The best 20 meter signals to Central Asia should be around 0100z to 0230z. Signals to Asia from Alaska should be much stronger than from other Continental U.S. locations.

Never fear, there is a radio service for hobbyists who only want
to talk to each other and have no interest in the technical aspects
of radio. It's called CB. The amateur radio service is differentiated
from other radio services in only one relevant way. It is the only
service where non-professionals are encouraged to experiment with
radio technology. For those who don't care to do so, there are other
personal radio services.

2526. PIC Keyer

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-06 00:00:00 UTC
From: Rick Miller <rdmiller@execpc.com>
Message-ID: <01bb9c36$36bddc40$060801c1@eng06.digalogsys.com>
Source record: 217390
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I've got *working* code for the PIC16C84 to implement an iambic keyer in only
FOUR PARTS:
(1) PIC16C84, which is an 18-pin DIP or SOIC
(1) "ColorBurst" crystal (3.58 MHz) for its clock
(2) small (~22pF, value not critical) capacitors to help the crystal

That's all! NO POTS. When it "wakes up" (power-up or reset) it's in 'menu mode'
and sounds out the menu options in Morse code for you. You browse back and forth through the menu by tapping either paddle, you adjust rate and pitch the same
way. Your current selection is [Enter]'d when you squeeze both. The menu goes like this:

KEY-->Iambic keying, keys the transmitter.
RATE-->Adjust speed.
TONE-->Adjust pitch.
PRACTICE-->Iambic keying, does *not* key the transmitter.
QUIET/SIDETONE-->Toggles sidetone generation from the keyer.

The chip has internal pull-ups on its input pins and debouncing is done in firmware. All configuration options are stored in on-chip non-volatile memory.
The output pin emulates an open-collector output that can sink 25mA.
It needs a DC supply (2.0 to 6.0 Volts DC is fine) and should be capacitively
coupled to your rig's speaker (okay, that's *five* parts with the 0.01uF cap).

Like I said, I've already got this code written and *running*. The problem is that I'm completely new to iambic keying... I have no idea what it's *supposed* to 'feel' like except what I've read in the ARRL Handbook and the Curtis 8044 documentation. That means I'm looking for beta testers!

If anyone is interested in trying this keyer out, just email me: <rdmiller@execpc.com>. If you can program a PIC16C84, I'll send you the HEX file. Otherwise, we might be able to make arrangements to get a pre-programmed PIC16F84 to you. Anyone should be able to come up with the other parts themselves.

Later on, I may offer it as a complete board done in surface-mount which should come out to be a rectangle less than 15mm on a side. By then, the user interface should be somewhat improved and I'll include some Morse memory functionality and beacon-mode operation as well.

Anyone interested?

Rick Miller (kb9obn) rdmiller@execpc.com

Dave,

I enjoy CW. It is my only mode. The only equipment I own is
CW only (first a Heath HW-16, now a Ten Tec Century 22).
I was first licensed three years, first as a Novice and
have now upgraded to General. Working toward Extra and
20 wpm. 15wpm is comfortable for me, and I can tell when
I've been off the air for a week or two. I am 37, and
was first interested in radio 20 years, when it again
was CW that attracted me. At the local field day, I
always gravitate toward the 40m CW trailer; somehow those
phone QSOs don't attract me, and I am forever confusing
Sierra, Tango, Alpha, etc. I love CW despite the fact
I must keeping working at it.

The enjoyable facts. Cheers/73. Kevin Anderson, KB9IUA
Rock Island, Illinois USA

Typical scanner junkie/whacker point of view. They ALL think that they are "providing a service" with their meddling.

BELIEVE IT! I can't BEGIN to list the reasons why it is BAD for jerk-offs with scanners to make death notifications, or otherwise get involved with somebody else's business (police, fire, ems, etc.).

More to the point, the EMT's in question, whose statement about "...too many hams..." started this thread, were doubtless concerned about patient confidentiality and didn't want to broadcast sensitive information that they knew the legions of scanner-heads would hear. That they equate hams with other parasitic forms of radio-user life forms, such as the scanner-head, is a sad statement about the hams' current public image.

2531. This Week in Amateur Radio #180 (for air through 9/13/96)

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #180 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 13-Sep:
-
1. Amateurs on the Atlantic Coast Prepare for Hurricane Fran
2. Storm Allows Lucid to Linger a Little Longer aboard Mir
3. ARRL CAC Ponders New Contest for Novices and Technicians
4. Weekly Propagation Forecast
5. "Ancient Amateur Archives" with Bill Continelli, KE2XB
6. Special Event Station Calendar
7. "The RAIN Dial-up" from Chicago
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Another Changing of the Guard in the ARRL's Hudson Division
10. League Board Upholds Election Committee Ruling on K2PBP
11. Tom Hogarty, KC1J, Moves to ARRL RIB Position from VEC
12. John P. Alexander, K6SVL, ARRL DXAC Member, SK at Age 73
-
Funding for the program's transmission and production expense was
provided this week by a grant from Mike Reynolds, W0KIE, of Tulsa,
Oklahoma, and the W0KIE Satellite Network, which carries "This Week
in Amateur Radio" to affiliates throughout North America.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at

In a previous article, ianls@patrol.i-way.co.uk (Ian Liston-Smith) says:

>Does anyone know where I can find more information regarding
>ionospheric cross modulation (also known as the Luxembourg Effect).
>This is the transferring of the modulation from one transmission to
>another in the ionosphere. First noticed in the 1930s and generally
>MWstations onto LW - or is it the other way around?!!
>Thanks,
>Ian
>ianls@patrol.i-way.co.uk
>
>

Yes! See THEORY OF IONOSPHERIC WAVES by K.C. Yeh and C.H. Liu (I was lucky enough to have them as iunstructors of the course with the same name at the Univ. of Illinois) - pgs. 379-381 in 1972 edition.

This may be a deeper treatment than you wanted, but it explains it very well.

73, Zack W9SZ

Source record: 217397

In article <50le25$6oa@texas.nwlink.com> zommbee@nwlink.com (zommbee) writes:
>Let this be a friendly thread, whether you love CW or hate it. I honestly
>want to know, and would love to read postings (or emails, for that matter)
>from both sides, but mostly from relative newcomers.

Dave, we were all newcomers once. Though I've been licensed 32 years
now, I still remember the first days of my amateur experience clearly.
I've never hated Morse Code, but I can't say I've liked using it either.
It's just a tool, and not a particularly keen one. Given a choice between
a good tool and a poor one, I'll chose the better tool every time.

Despite what you say, throughput does matter, and Morse is clumsy and
slow. Nonetheless, as a Novice I used it (by regulatory fiat), and later
as a General I used it out of necessity as part of my traffic handling
activities. I was net control for our state SSB net, and also served as
liaison to our CW net when no one else could be found to do it. Those nets
are technologically obsolete now (they were then too in truth, even then we
booked traffic from those nets to RTTY for long haul transport, but the
average CW traffic handler didn't want to know about that).

What I hated, and still consider absurd, are the regulations which
require passage of increasingly more rapid manual Morse tests in order
to gain unrelated operating privileges on long haul spectrum. Even
32 years ago there were better techniques than manual Morse, and
today that is even more true. Yet, like the inefficient farmer, the
Morse contingent still wants a government enforced protective tariff
or subsidy in the form of tests unrelated to privileges granted. This
sort of protectionist mentality is abhorrent and makes Morse a mode
on welfare. That I hate.

But I don't hate Morse Code. As a historical artifact of a bygone era,
it is interesting. But as a current day tool, like the buggy whip in an
era of horseless carriages, it is a quaint anachronism. I occasionally
like to visit technological museums, in order to appreciate how far we've
come, but I wouldn't want to have to live with that technology every day.
Manual Morse is not a sharp tool, and it is sharp tools that I want to
perform the communications tasks which I desire to accomplish via amateur
radio.

As absurd as it may seem, people tend to get emotionally attached
to their tools. I consciously try to avoid that, but it is inevitable
that I become enthused about new tools, particularly powerful tools,
which I find useful. I am always looking for better solutions to old
problems, and newer applications to be served. That makes me a
technophile. Thirty two years ago, I thought all amateurs were
technophiles. In recent years I've realized that isn't true. Just

as in society in general, there are technophobes (modern day Luddites) in amateur radio as well. I find that ironic (and not a little disturbing considering the charter of the service), but there it is.

I've always felt that raging against machines, literal or figurative, was one of the highest crimes against humanity. The machine is the embodiment of the finest of human thought and creativity. To rage against that is to rage against what is best in Man. Man is differentiated from other animals because he is the premiere toolmaker on this planet. The development of newer and better tools should be met with joy, and not with hate. Inevitably, old tools are displaced when newer and better ones become available. That should not make us hate the older tool. It once served us as well as it could and deserves an honored retirement.

Let Morse join spark in assuming an honored place in the museum of radio history. And let those whose joy is the re-enactment of history continue to bring it out, dust it off, and play with it from time to time. That is fit and proper. But let the technophile rejoice in the newer and better tools available to him as well. Don't burden him with a re-enactment in which he has no interest and for which he has no need.

Newsgroups have charters for a specific reason. To segregate discussion
for the convenience of the community. Attempts to force conversation
from one group to another (off charter) is merely being anti-social.

> I think many of the complainers simply want to squelch the debate by

Funny, but I thought .misc and .policy were at the same "sub-sub" level.

> policy is not carried as widely as .misc from my experience ...

There is a reason for that.

> (my old
> ISP didn't carry it), and I've heard by e-mail from many others that
> they don't get .policy either ...

That would tell the average person something. Mainly, they're not
interested in reading about a code/no-code debate.

New to the web "Ham Radio Crossword Puzzles". Just link to
http://www.sarrio.com and follow the links to the 1st ever interactive
crossword puzzle for ham radio operators.

The only catch: You must have a Java capable browser to view the
interactive puzzle. Netscape 3.0 and Micrsoft Explorer 3.0 are both Java
Capable.

I am also looking for hams interested in adding their words and clues to
future puzzle. I looking for puzzles written with questions for the
various license class test. These puzzle are a great way to test your
knowledge of the theory before you take the test.

The correct method for writting these crossword clues and word answers is
explained on the Crossword Puzzle page. Check it out and let me know what
how you like it. 73's Ray

ARLB058 FCC COMM. EMERGENCY

ZCZC AG38
QST de W1AW
ARRL Bulletin 58 ARLB058
From ARRL Headquarters
Newington CT September 5, 1996
To all radio amateurs

The FCC has issued a voluntary communications emergency declaration:
All amateurs are requested to cooperate by recognizing the existence
of a voluntary communications emergency in North Carolina and
therefore relinquishing the use of frequency 3923 kHz plus or minus
5 kHz, for handling emergency traffic resulting from Hurricane Fran.

The FCC also issued a voluntary communications emergency declaration
for South Carolina, recognizing 3993 kHz plus or minus 5 kHz for
emergency traffic.

I would guess that a properly designed postcard should be doable for
less than 40 cents each ... the recipient would be required to pay the
postage for mailing it back.

They could be individually bar-coded at printing to permit the vote to
be electronically scanned into a database, thus reducing the cost of
processing returns.

All in all, it would give the FCC a much-needed census and the ability
to reduce its administrative costs by purging obsolete records from
their database.

>

Jim,

Consider the following ... if we had more technically-inclined, skilled individuals (like those being turned off by the CW testing) packet would have progressed beyond its "dark ages" (1200/9600) and real networks might be in place by now.

Then you could have response times very similar to what you can get on the internet ... via radio ...

As I said in another post, packet radio USER links should be ROUTINELY running at 56-64kbps MINIMUM and "backbone" links at T1 (1.544Mbps) or faster.

>Don - N6CNB

Don,

No problem ... I think the technical part of the test should be a bit
tougher and better designed ... too many existing hams really don't have
a clue about the radio part (but they can copy xwpm CW) ... they just
memorized some multiple guess questions.

As for the commercial license equivalent, I passed that in 1975, too.

Steve,

He didn't say that helicopter pilots did not work for, nor have to take
a test to get, their license ... but they DON'T have to take a mountain
climbing test.

It's a very fair comparison ... CW "skill" has NOTHING to do with
proper operation of radio equipment in other modes ... just as mountain
climbing skills have nothing to do with flying a helicopter.

That's exactly his point ... while there's more than one way to get to
the top of the mountain (old-fashioned climbing vs. modern helicopter)
skills in the first have NOTHING TO DO WITH qualifications for the
second.

This is EXACTLY the situation we have with the CW test ... it has
NOTHING to do with operating other (modern) HF modes.

Therefore, it should NOT be a requirement. Period.

>>

Why not? Why should Morse code be the ONLY government-mandated mode???
Why shouldn't the government instead mandate that we all have CDMA
spread-spectrum capability instead and pass a detailed test in the
theory of same??? That would be far more appropriate from a technical

standpoint in light of the present state of technology (in every area
except the technically stagnant, backward amateur community, that is).

>> > Adell's offer is moot because I have passed Morse code examination, not only
>> > at 15 wpm for my Advanced certificate, but also at 30 wpm plain text and 25
>> > wpm cipher groups for my employment at that time.
>>

What's being pointed out here is something that most CW proponents would
like to "sweep under the (political) carpet" ... the fact that many
CW-tested, CW-capable ham licensees see the CW requirement as outdated,
rediculous, and counter to the future growth and survival of ham radio.

>actually LIKE CW, that ALL newcomers HATE it, and resent being told they
>have to learn it. Is this true? Or do newcomers LIKE code? and USE it?

Some newcomers like it. (It appears) most don't. Also, many old-timers
don't like it either (I've been licensed since 1975 and I hate it).

According to the ARRL's survey (of ARRL members only, not including the
large non-member population) only 54% of (ARRL members) operate CW AT
ALL. That implies that 46% of ARRL members NEVER use CW.
I would be inclined to bet that non-ARRL members use it even less,
because I know a LOT of hams who refuse to join ARRL primarily because
they view it as backward and pro-CW.

I hope my reply has been in line with what you wanted and that it was
friendly enough.

Enjoy your CW ...

Nice try, but its a non-sequiter.

These "high speed chat modes" would all be occuring on VHF+. A codeless
tech license is available that gives free access to all those bands.

If these wiz-bang techno-geniuses that would be developing this
technology were at all really interested in amateur radio, they'd be
on the air, today, experimenting with what you describe, using the
license class that already exists for exactly that purpose.

Face it Carl, amateurs haven't been the "cream of the crop" technically
in the last 50 years (and are not going to be, unless we turn the hobby
completely over to the radio "professionals" like you). With some
notable exceptions, the majority of amateurs are just ordinary people
who like to communicate via radio. If we all have to be ardent devotees
of the latest "bleading edge" technology only you, and a few others like

you, will be around to talk to each other... that is, unless Kenwood, Yaesu and the other manufacurers mass produce the stuff for the rest of us lesser lights.

: MWstations onto LW - or is it the other way around?!!
: Thanks,
: Ian
: ianls@patrol.i-way.co.uk

Radio Luxembourg ran more than half a megawatt on long wave. Because
the highest possible antenna is a pretty small fraction of a wave length
high at 150-200 KHz, most of the radiated power went nearly straight up.
The effect modulated medium wave signals reflected from the ionosphere
above Luxembourg with the program of Radio Luxembourg. The reception
of the long-wave station was unaffected.

A victim's name is rarely given over the air. Regardless, the above "friend"
would have said the same thing had he received the info via a scanner, TV
news, or broadcast news. Don't blame a listener's insensitivity on the mode
in which the info was gained.

>I remember the old story about the cop delivering a death message to the
>wife of a fatality accident victim. "Are you the widow Jones?", the cop
>queries. "I am not." she replies. "The hell you aren't!" quips the cop.

Police chaplains or high-ranking officers usually deliver death messages;
they've been given training in how such information should be given to
next of kin.

Tell us what you've done for ham radio during the 20 years you've been licensed. You might not have full HF privileges but you could have been developing new schemes of communication for HF users. Does your altruism only cover those bands in which you have access to?

Face it, Karl, you only want the code dropped so *you* can gain full HF privileges.

Most of the radios being built at home by hams seem to be for CW according to what I read on the QRP and Glowbugs lists. This seems contrary to your claim that CW ops are appliance operators.

All? What about those radio services intended for just local communications having nothing to do with commerce? By definition, CB is for personal comms (not commerce) of a local (not interstate) nature. For a station to be in compliance with Part 95 they must not "work DX" nor carry on business transactions.

>The U.S. constitution specifically allocates the right
>to regulate interstate commerce to the federal government.
>The U.S.Congress cannot abdicate this responsibility without amending the
>constitution.

But if CB doesn't fall into the interstate commerce catagory, then there is no sense in saying "It's unconstitutional!".

So NOTHING in the world counts as much as or more than CW "skill" ???
That's patently absurd ...

I'm not saying anything should be "handed to someone for nothing" ...
I'm saying that there should at least be alternative ways to earn a
license.

>Fine, lets get 20 countries to agree to eliminate the code requirement, but

We're back...

DIVISIONAL NEWS
The next examinations will be held at Amateur Radio House, Parramatta, on Sunday 22 September 1996. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12:30pm.

Please apply to the office for the necessary forms. Applications close on Thursday 12th September. Acceptance cannot be guaranteed for any applications received after that date.

WICEN NEWS
Last Saturday a national telephone conference, hosted by the WICEN Federal Coordinator Leigh Baker, took place between the various Divisions. Many issues were discussed, and a report will be published shortly. We thank Jo VK2KAA for her hospitality.

September is a busy month. The Central Coast meeting is on Friday, and the Management committee meeting, so far at Burwood SES is on Saturday, starting at 1300 (note the earlier time).

The NSW Cancer Council is sponsoring a Fun Run next Sunday, the 15th September, from Darling Harbour to Sydney University; ten operators are required for the four hour event, and those interested are requested to contact Kevin VK2CKD.

The VRA Sydney Bike Ride will be held on Sunday 22nd September. It will start from North Sydney, cross the Harbour Bridge, travel around Botany Bay and finish Kempt Field at Allawah railway station. If you would like more information, or if you may be available then please contact the Coordinator for this event, who is Kevin VK2CKD.

Finally, the VRA Extraordinary General Meeting is on the 28th September.

Next month sees JOTA over 19-20th October; and the "Hawkesbury Classic Paddle", run as usual by Kevin VK2CKD on 26-27th October. Later on in the year is the Oberon Car Rally, to be held on Saturday 2nd November; the event co-ordinator is Neil VK2XNF.

Those regions wishing to have their activities publicised on this broadcast are requested to contact the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to VK2KFU@VK2KFU (AX.25) or vk2kfu@gw.vk2kfu.ampr.org (TCP/IP).

--Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

NEWS BRIEFS

Finland, Finland, Finland, with its mountains so lofty, its treetops so tall, is the country where you quite want to be if you're in the market for an anti-gravity machine, according to a report in the Herald this week.

Researchers at the Tampere University of Technology discovered the effect while conducting tests on a superconducting ceramic disc, spinning while suspended in a magnetic field and enclosed in a low-temperature vessel called a cryostat.

While such claims appear every week, and get considerable press coverage in certain "fringe" magazines, the Finnish reports are being taken seriously by NASA and Britain's Institute of Physics. If the effect can be duplicated on a larger scale outside the laboratory, the implications could be astounding.

(We wonder if Monty Python foresaw such developments, when they sang "Finland has it all"...)

Comet Hale-Bopp (a bit easier to pronounce than Hyakutake!) appeared in our skies this week. It is still very faint, but by around March next year, it may well be the most spectacular comet to been seen for many years.

--Sydney Morning Herald and The Australian

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(30 AUGUST - 05 SEPTEMBER)

Issued on 06 SEPTEMBER 1996

Date 30 31 0l 02 03 04 05
10cm 73 76 74 72 71 71 70
A index 17 13 6 5 3 9 (7 estimated)
T index 4 25 12 15 13 13 11

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO ACTIVE ON 30TH AND 31ST AUGUST; QUIET 1ST AND 3RD SEPTEMBER; AND QUIET TO UNSETTLED ON OTHER DAYS.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE 15 TO 30 PER CENT DEPRESSED 0100 TO 0700 UT. FREQUENCIES RECOVERED DURING LOCAL NIGHT. ON 31ST AND 1ST, FREQUENCIES WERE ENHANCED TO 30 PER CENT, AND 15 PER CENT ENHANCED ON 2ND, THEREAFTER NEAR PREDICTED MONTHLY VALUES.

FORECAST (06 SEPTEMBER - 12 SEPTEMBER)

SOLAR: VERY LOW
GEOMAGNETIC: QUIET TO UNSETTLED.
FREQUENCIES: NEAR NORMAL PREDICTED MONTHLY VALUES

COURTESY OF IPS RADIO AND SPACE SERVICES
SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS
THE ILLAWARRA AMATEUR RADIO SOCIETY ADVISES ALL MEMBERS AND VISITORS, THAT IT IS SAFE TO ATTEND THEIR SEPTEMBER 10TH MEETING,STARTING 7:30PM, AS THEIR A.G.M WAS LAST MONTH!!!? SO WHY NOT COME ALONG TO THE S.E.S BUILDING MONAGUE STREET NORTH WOLLONGONG AND MEET THE NEW PRESIDENT AND COMMITTEE.AFTER A SHORT MEETING THERE WILL BE A COMPUTER NETWORKING DEMO AND PART ONE OF A VIDEO. FOLLOWED BY A CUPPA, THOSE HEAVENLY PIKELETTS, AND A GOOD RAG CHEW! THE RAFFLE PRIZE FOR THIS MONTH IS A 12 BAND PORTABLE RECEIVER. THERE IS STILL TIME TO OBTAIN YOUR TICKET TO BE IN THE DRAW FOR THE FT SEVEN B, SO DON'T FORGET TO BRING YOUR MONEY WITH YOU!! SO WE WILL SEE YOU ALL THERE.

--BRIAN VK2UBF PUBLICITY OFFICER I.A.R.S.

AFFILIATED CLUB NEWS
The Southern Regions Clubs Inaugural Meeting is to take place on Saturday 28th September at 11am in the Goulburn RSL club, Market Street, Goulburn.

Contact for this meeting is Tony Williamson VK2VCR on Telephone (048) 21-6797 business hours, (048) 21-7860 after hours, also contact can be on packet at VK2TLH.

******

The New England Amateur Regional Conference Group's Meeting will take place on Sunday 29th September at 11am in the Aero Club rooms at the Armidale Airport (not the time I had put to air last week).

Contact for this meeting is the Secretary Corey Taylor VK2HEX on telephone (067) 66-1599 business hours, (067) 66-1599 after hours [should these numbers be the same???] also contact can be by fax on these numbers, or by packet at VK2TDT.

******

The New South Wales Affiliated Clubs conference is to take place at Amateur Radio House, Parramatta, on 9th and 10th November, not the dates quoted on last week's broadcast.

Would all items for discussion be sent to me at Amateur Radio House, PO Box 1066, Parramatta 2124.

So far, no items have been received.

******

The Orana Region Amateur Radio Club will be held on 26th September in the Scout Hall in Talbragar Street, Dubbo, at 8pm.

******

-- NSW Affiliated Clubs Officer, Ken Westerman VK2ADW in Dunedoo

GLADESVILLE NEWS
A reminder to Gladesville Club members and visitors that the September monthly meeting will be held tomorrow evening - Monday the 9th - at 7:30pm. The venue is Number One, Birdwood Avenue, lane Cove. Car parking is available in the public car park opposite.

Telephone contact with the Gladesville club is on:-

(02) 9427-0530

or by mail to PO Box 48, Gladesville NSW 2111
--Keith VK2ZZO, President / TV Coordinator

THE FISHERS GHOST AMATEUR RADIO CLUB WOULD LIKE TO INVITE MEMBERS AND VISITORS TO THIS MONTHS CLUB MEETING AND LECTURE HELD AT THE CAMPBELLTOWN HIGH SCHOOL...

THE LECTURE AND DEMONSTRATION WILL BE GIVEN BY JOE HARRIS FROM A.A.P.R.A...

THIS WILL BE INFORMATIVE NOT ONLY FOR THE NEWCOMER BUT ALSO THE MORE EXPERIENCED IN PACKET RADIO...

IF YOU NEED TO GET THAT QUESTION ANSWERED.. OR YOU JUST WISH TO SEE PACKET IN OPERATION.. THEN COME ALONG....MEET SOME OF THE MEMBERS...HAVE A CHAT...AND ENJOY A GREAT DEMONSTRATION..

THE LECTURE WILL BE HELD ON TUESDAY THE 17th OF THIS MONTH AND IT COMMENCES AT 7:30 PM ...THE CLUB ROOMS ARE LOCATED ON THE SOUTH END OF THE HIGH SCHOOL ...CHAMBERLAINE ST CAMPBELLTOWN..LOOK FOR THE YELLOW PAINTED BUILDINGS....

HOPE TO SEE YOU THERE

--FROM JIM ZENNER VK2LJZ, Club Secretary..

WAVERLEY AMATEUR RADIO SOCIETY
Meetings of the Waverley Society are held on the 3rd Wednesday of every month, with the next being on the 18st of September. Simon Buxton (VK2EII) will review and demonstrate the ICOM IC 706 mobile transceiver introduced last year and compare it with its predecessor the IC 735. Information on modifications and purchase sources will also be given. The subject should be of interest as a number of members have bought this rig and others are contemplating doing so.

The meeting will be held at our clubhouse in Vickery Avenue, Rose Bay (off New South Head Road). Starting time is 7:30 p.m., with doors opening at 7, but why not come along a bit earlier and join some of our members for supper in the R.S.L Club cafeteria next door?

Remember that the first Saturday afternoon every month is project time. The next such afternoon will be on Saturday, 5th October, so come along to our clubhouse around 1:30 p.m. and help in the process of re-building the club station where your assistance would be much appreciated.

Ben Buxton (VK2XUF) has recently upgraded our Internet home page with the inclusion of a number of photos and other material. The web address is a bit complex to give on the broadcast but it is easy enough to find by searching for "Waverley Radio" using one of the Internet search engines.

A reminder that the club conducts two morse practice sessions a week so contact Grant Hinchcliff (VK2TU) on 9778-7100 during business hours or 9319-1913 after hours if you are interested. This is also an opportunity to improve your poetry as Grant has found that Shakespeare's sonnets make suitable length test pieces!

--Simon Buxton - VK2EII - Club President

The Newcastle Scanner Group - NSG - would like to advise listeners that its Internet Home Page is now active. N S G is a hobby group dedicated to scanner listeners in the Newcastle, Central Coast, Hunter Valley and Mid North Coast regions, and Shortwave enthusiasts world wide.

The N S G Home Page contains information on our Group, our Awards Programme, and links to the Home Page id various International Broadcast Stations and other interesting clubs and groups. The URL is

http://users.hunterlink.net.au/nsg

NSG can also be contacted by e-mail: nsg@hunterlink.net.au or by post to PO Box 728, Charlestown NSW 2290.

The VHF DX Group is an informal group of active VHF and UHF operators. the group was formed to promote non-repeater VHF activity and to assist newcomers to the bands.

VHF DX Group meetings are held every second month amd consist of technical lectures, Equipment demonstrations and workshops.

The next meeting of the group will be on Tuesday 17 September at Amateur Radio House, Wigram Street, Parramatta.

This meeting will be a lecture by the cloven-hoofed Roger Harrison VK2ZRH, on the latest forecasts for the next sunspot cycle. Roger has long been recognised as a leading ionospheric propagation expert in Australia. The title of Roger's lecture is: "Cycle 23 - Bigger than Cycle 22?"
We have also identified a cheap source of ex-commercial microwave transverters that can be modified to produce one Watt of SSB on 10GHz from 144 MHz. Further details will be available at the meeting.

Don't forget the Tuesday activity nights on 144 MHz and the Group's Sunday morning net on 146.550 MHz FM starting at 11am.

--Submitted by Mike Farrell VK2FLR on behalf of Richard Soulie VK2ARS

LIVERPOOL AND DISTRICTS AMATEUR RADIO CLUB.
The next meeting of the Liverpool & District Amateur Radio Club will

be heldnext Wednesday eveneing, the 11th of September at the Scout Camp Cambridge Avenue Glenfield, near the Moorebank Army Camp, starting at precisely 8pm.

The meeting will commence with a lecture which will last for an hour to an hour and a half and then the General meeting will be held.

The lecture will be on how to use PROTEL SCHEMATICS and AUTO TRAX. If you would like to get a professional type layaout for your printed circuit boards on your home brew equipment, then this is the lecture for you. The lecture will be given by Brian VK2TRS who has had 4 years experience using this package. A practical demonstration will be projected on to a large screen for all to see.

Brian has prepared a very detailed handout which will be given to attendees on a first in first served basis so be early and visitors are welcome.

--Submitted by Garry VK2TSR for the Liverpool & District ARC

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD AS USUAL ON THE 2ND SUNDAY OF THE MONTH IN SEPTEMBER AT 109 WIGRAM ST. PARRAMATTA 1.00 PM TODAY!!!

FUTURE ATV'ers ARE WELCOME TO BRING ALONG ANY SATELITTE RECEIVER AND THE CLUB WILL TUNE IT UP ON THE DAY TO PICK UP OUR 1.2GHz REPEATER

THE AATC THIS YEAR IS AS USUAL ASSISTING WITH JOTA HOWEVER THIS YEAR IS DIFFERENT, WE ARE TRANSMITTING ALL OVER AUSTRALIA, NEW-ZEALAND AND NEW-GUINEA COURTESY OF AN OPTUS SATELLITE B3 ON T3 ALL IN CLEAR BETWEEN THE HOURS OF 9.OOAM TO 3.OOPM 6 HOURS A DAY COURTESY OF OPTUS.

WE WILL BE WELCOMING FAX RETURNS BACK TO SYDNEY TOWER ON THE 19TH AND 20TH FOR ACKNOWLEDGEMENT ALL HOURS AND FOR A UNIQUE QSL TO BE POSTED OUT SOME TIME LATER.

THE FAX NUMBER TO BE USED ON THE 2 DAYS ONLY IS (02) 9233-2581. OPTUS HAVE DONATED THIS SATELLITE FOR THE 12 HOURS PLUS SO ALL YOU WHO ARE CAPABLE OF RECEIVING SATELLITE PLEASE SEND BACK A FAX TO SYDNEY TOWER ON (02) 9233-2581

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. INC. Publicity Officer Bob Barnes

COMING EVENTS (8 Sept 96)
Australian Amateur Television Club meeting.....Today
Gladesville ARC meeting.....Monday
CW Operators' QRP Club 160m scramble.....Wednesday
Liverpool and District ARC meeting.....Wednesday
Applications close for Divisional Amateur exams.....Thursday
SAREX Shuttle mission STS-79 launch.....Thursday

Divisional Council meeting.....Friday
WICEN Central Coast meeting.....Friday
NSW Cancer Council Fun Run (WICEN).....next Sunday
WIA affiliated clubs net (after evening broadcast).next Sunday
VHF to SHF DX Group meeting at Parramatta.....17th
Fishers Ghost ARC meeting.....17th
Waverly ARS meeting.....18th
Manly-Warringah Radio Society lecture night.....18th
Western Sydney Amateur Astronomical Group meeting.....18th
Radio Veterans meeting at Parramatta RSL club.....19th
CW Operators' QRP Club 80m Scramble.....19th
Electric Vehicle Field Day at Amaroo Park, Anangrove.....20th
Blue Mountains ARC Fox Hunt.....20th
Amateur Radio Awareness Day (in the USA - how about VK?)..21st

If you would like to submit a news item for inclusion in the weekly broadcast, please send it to us by one of the following means:

- by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
- by fax to (02) 9633-1525;
- by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
- by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday preceding the broadcast; if submitting news items by packet or internet, please allow for forwarding delays in the network.

If submitting printed copy, please:
- submit your news item on A4-size paper;
- double space your text;
- write on one side of the paper only, and
- use a plain font such as "Arial" or "Helvetica", 12-point or larger.

This is especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, and use the exact words you wish the announcer to say on-air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

No one saw the little LEO threat coming either. Don't be so smug in
thinking HF is safe from threats. New technologies are now beginning
to crack the hard problem of HF, and HF is beginning to look like a
viable lower cost alternative to dedicated geosync satellite data
links for several services.

>Why are the majority of packet stations still using archaic 1200 baud,

56 kb packet *is* old hat. We've been doing that for 8 years. It's no challenge (strong signal technique in a simple gaussian noise environment rarely is). It is practically Plug and Play using hardware available off the shelf. The reason *everyone* doesn't use it is not technical. It is primarily ignorance and amateur politics. Ignorance can be cured, provided people will open their minds and listen, but politics is a nastier nut to crack (and not something most technical people care to address). One way to break the logjam is to bring in fresh people who aren't burdened by preconceived notions of what is possible and practical over amateur radio.

Outside of the metroplexes, amateur networks are sparse. VHF/UHF won't do to span the distances required to tie together the scattered VHF/UHF MANs. We need a WAN technology to do that, and barring amateur geosynchronous satellites, that's HF. HF offers difficult and novel challenges to the modem and protocol designer because of the unstable nature of the channel, IE multipath, non-gaussian noise, and variable propagation. This is where the really interesting work will be done by amateurs (regulations permitting). It is already starting to be done by developers in the commercial realm.

Geosync satellites will always be too expensive for amateurs as long as cost for access to GEO remains high. And that looks likely for the forseeable future (the Delta Clipper crash squelched the best hope of significantly lowering access to orbit costs). So if we are to build an affordable national and international network, we're going to have to use HF. Fortunately, the rapid decline in DSP hardware prices makes that feasible, and the nature of HF makes it possible to proceed piecemeal, unlike with a satellite, so that deployment costs can be spread over a suitable timeframe and suitable number of amateur participants so as not to be overly burdensome on any one individual or group of individuals. This is all provided amateur politics doesn't get in the way of course.

We need to shift our paradigm away from the telco model of high speed trunks and low speed local loops. Reality says amateurs must use high speed local loops and lower speed trunks. This is seen by some as a handicap, but it isn't really. Traffic analysis shows that the most intensely interactive and content rich traffic will be local, with less frequent and less demanding need for long distance traffic. With the proper paradigm, this can be a quite successful and useful model.

Much of our current amateur radio long distance traffic is highly redundant and low in information content. That can easily be compressed into more compact and efficient form. In many cases, complete messages can be compressed into a single symbol or small number of symbols. In theory, any message can be expressed as a single Godel number. In the past, this hasn't been practical due to limited computing resources. That's changed. While we might not actually want to use Godel numbers, we can use dictionary based (similar in concept to ARRL numbered radiograms,

but with many many more possible messages chosen automatically
by computer to match the message content entered by the amateur
as closely as possible) or recursive TIL based methods of compressing
content (Java is an example of a way to reduce traffic on
the network while still maintaining the illusion of a highly
interactive connection for the user).

As long as we can forego highly novel content rich exchanges, we
can utilize HF trunks with 8x less throughput than our local loops
without creating significant bottlenecks. Especially for interactive
exchanges, HF links are better because they have lower latency.
Latency is the real killer of interactivity, and it increases in
direct proportion to the number of relay hops used, and decreases
only marginally with increased trunk speeds. By replacing dozens
of UHF hops with a single HF hop, we can keep latency down enough
to more than make up for the relative ratio of trunk speeds.

By using improved signal modulation codings and demodulation
techniques, we can achieve 9600 baud on HF without excessive
bandwidth consumption. And we can use ALE techniques to take
advantage of the MUF to the maximum extent possible for the
path being traversed at any given hour. This will minimize
the store and forward delays which currently plague HF messaging.

We will need to produce a better dynamic routing protocol than
the mostly static ones we use now. We need for the network to
be able to self-configure and self-heal with minimal stored
central information and with minimal operator intervention.
We can't really develop this on VHF/UHF since the paths there
are not sufficiently variable to make realistic testing possible.

The bits and pieces to do all this are either available or
within reasonable expectations. We only need the opportunity
to pull them together. This depends very much on the attitudes
of amateurs. If amateurs remain stuck in old paradigms, it
will be difficult or impossible to bring this vision to
reality. If we can open up to new ways of thinking and operating,
then turning this sort of vision into reality will be much
easier.

In the beginning, amateur radio activity revolved around
networking (remember the American Radio *Relay* League?),
but we moved away from our roots along the way and have
mostly approached amateur radio as a solo competitive
"hobby" where the collection of "wallpaper" is the highest
goal. Growing our own national and international data networks
will return us to our roots in a way that Morse Code tests
never could.

>also one of the last enclaves of homebrewing, something I've enjoyed through
>many a Heathkit.

Heathkit? Homebrew? Well maybe it is home soldering, but "insert lead,
solder two" isn't my idea of homebrew. I don't want to belabor this
too much since it's off the main topic, but if you don't put a bit of
creative energy into the project, in my mind it is just work at home
electronics assembly, something minimum wage workers are hired to do
(or more recently, what assembly line robots do).

I suppose that if you don't *have* to do it for a living it can be
considered fun, some people sure do enjoy building kits, and pride
of craftsmanship certainly has its place, but something a bit more
creative which engages the brain as well as the eye-hand coordination
might be even more fun. I have in mind, of course, the design phase
of a project. The actual assembly phase is just drudgery as far as
I'm concerned, a necessary evil to get to that "ah ha!" stage where
the project passes the smoke test and actually meets design expectations
(or more commonly does *not* meet expectations and leaves you with the
fascinating task of debugging to see what went wrong).

>I would be willing to go for a no-code (or maybe 5 wpm; that isn't asking
>that much) HF license, provided that there was no encroachment on the CW
>portions of the bands, ever. My own theory is that, when the phone bands
>become even more crowded, human nature says that there will be a grab for
>the CW portions of the band.

This is a legitimate concern. The data sub-bands could be put at risk
if too much pressure were placed on the voice and image sub-bands. So
we should encourage the use of data modes more on HF so that these
sub-bands are better defended. Remember, you can use CW anywhere, not
just in the data sub-bands. The data sub-bands are small enough now,
and defacto are even smaller since the data users voluntarily restrict
their spectrum usage to accomodate the CW users who tend to congregate
toward the bottom of the data sub-bands. We wouldn't want these limited
segments to become even smaller.

Frankly, in an ideal world I'd like to see all the formal sub-bands abolished. Each mode should be able to compete on its own merits (and in heavy interference, analog voice would be the big loser). But that may be unrealistic. We need to maintain the sub-bands in order to protect analog voice users from interference from the more robust machine digital methods with which they cannot cope. Manual methods tend to cause their users to become frustrated easily in the face of interference, and that tends to bring out bad manners. The machine methods don't get emotionally involved, and they have infinite patience.

Of course we could accomodate the voice users another way. We could switch from analog to digital voice techniques (preferably spread spectrum) and put voice on a more equal footing with the data modes. This would allow the abolition of the formal sub-bands entirely without incurring the bad manners we'd otherwise see. Such a switch is not implausible. It would be no more cumbersome to accomplish than the switch from DSB with carrier AM to SSB, and the benefits it brings would be similarly motivating.

But then that other manual method, OOK Morse, would be the one whose users suffer from frustration. In that regard, we'd need a sub-band which was OOK Morse exclusive, a sanctuary if you will, for those wishing to use this manual method. Since such a sanctuary does not now exist, I propose the lower 25 kHz of each band be set aside as such a sanctuary. We could convert to SS CW instead, but I don't think that would fly with most CW enthusiasts. It is the very primitiveness of the technique which seems to be its main appeal.

Oh, I hope you know who doesn't see this. He'll start
complaining about the "I" disease of amateurs again. :-)
CW does have the benefit of forcing one to be concise.
That may be a virtue, but if it takes as long to say
as a more content rich communication, is it really a virtue
after all? Perhaps this is the reason many ham conversations
seem so stereotypical (on voice as well). It is because
we have been trained to say little because to say more
would be burdensome. Maybe not, perhaps we *are* just
boring regardless of methods used.

NcLuhan said that the medium *is* the message. Perhaps
that's what you're saying as well. It may not be important
to you whether you communicate effectively with another,
the mere act of communications may suffice (that would
certainly seem to be true for the Dxer). McLuhan divided
media into two types. Media like TV invokes the emotions,
while other media, such as books, invoke a more cerebral
reaction because books offer to make you think. Perhaps in
this regard you see CW as an emotional medium. There might
not be much content, but the character of the communications
is engaging on an emotional level. Instead of bubble gum for
the eyes, it is bubble gum for the ears and fingers.

Funny, all the new technology you propose seems to be geared towards
VHF+. A no code license is perfect, where's all the techno-weinies
you keep saying that code holds back??? why aren't they perfecting
new amazing techo-wizardrey for the VHF+ frequencies??

Tell you what Kar-el. You give me 6 convincing reasons how a no code HF license is
going to save the HF bands, where code is being used on a regular basis, and I will take up
the cause.

I want YOU to cite examples of HF band loss, how the HF bands are under attack
by commercial interests. How the HF bands will benefit by the increased numbers
of operators. In short, tell me a great a wise sooth sayer, say me some sooth

Steve

The folks who put the amateur 2-meter and 70-centimeter bands on the plate for the little LEOs probably honestly believed that they could be legitimate sharing partners. They are not looking to be primary in the amateur bands. I don't know whether they are seeking to be primary in any of the many other frequencies they put on the plate, but it is quite likely that they are not.

In this case, I think the sheer volume of the response certainly got their attention. When we learned that they were seeking amateur frequecies, we asked that they be removed from consideration. We were told that no frequencies would be removed. We then pointed out that ARRL would have to oppose this with vigor, inform our Members and the amateur community what was taking place and seek their support. This was quite acceptable to all concerned. I suspect that they had envisioned a small number of letters and a few filings and reports from ARRL. I feel comfortable estimating that a significant number of the response came from "no-code" Technicians. I am pleased that on this one issue, hams are setting aside their differences and taking what steps are necessary to protect our spectrum (for the most part, anyway, 73 editorials notwithstanding).

While a few of the responses were certain to be inflammatory, from what I have learned, most of them were well reasoned, explaining how important those two bands are to hams. From there, the ARRL has continued to monitor the situation and offer substantial input. Zack Lau and Paul Rinaldo are just wrapping up a 40+ page technical report, describing all of the technical parameters of amateur operation on the two bands in question.

Ah yes Burbank California, been there done that. Burbank has the Santa Monica mountains to the south and the Verdugo Mountains to the north.

The locals call Burbank a RF sump. I have worked in Burbank fo about 20 years, and as I enter burbank through Sun Valley, I don't even try to use the 2 meter radio, I listen a FM stereo station, if the skip is in.

It is also belived that RF in Burbank is simply sucked in and forgotten.

I am an old fart. For 11 years I have used both voice and CW. CW is a
mode worth using. I can go both ways on this issue. If CW where to
be gotten rid of, then I would like to see the 500 question pool NOT be
released and questions and answers. Simply release a text book that
will need to be studied in detail in order to pass the test.

On the other hand there is no reason to get rid of CW. Either as a
mode or as a requirement to get a license. Why be lazy, why look at
it as such hard work? Just learn it. It is not that hard to do. It
is sorta fun to learn and use.

What can I say folks. I miss the old days. The days when as a young
man of 18, keeping the coffee pot warm on top of the radio. That nice
orange glow of the tubes, and neat shadows it leaves on the wall.
That slight dim of the lights when one tunes up. The ckt breakers
tripping off when SWR reached 3:1. Voltmeters bigger than the desk

the radio sits on. Now I tune up and find almost no one to talk with.
A real bumber...

>
>Yeah, so much for that "we need more hams to save our bands, let's
>create a codeless tech license" pig-in-a-poke, eh?

Fortunately, though we couldn't know exactly from where threats would come, some of us did expect further threats after losing 220-222 MHz. We couldn't hold onto that spectrum because we couldn't document adequate usage of it, and we couldn't show amateur growth rates which would require it in the future. At the time of the 220-222 MHz loss, our growth rate was stagnant, actually probably negative due to the unpurged silent keys. (Novice Enhancement had been a huge yawn, and didn't allow operation below 222 MHz anyway.)

Thus the fact that we've grown our numbers by 33% since 1991 turned out to be wise. While the little LEO threat may not have subsided completely, we appear to have intimidated them quite a bit and there has been no further mention of grabbing 2m or 70cm coming from the committee in their last 3 meetings. They appear to have dropped the idea like a lead balloon.

We likely couldn't have done that with the stagnant growth statistics of the 1980s. But because we do have vigorous growth in that part of our spectrum, it became apparent that reallocating it would not be the easy pickings that the 220-222 MHz grab had been. So contrary to your assertion, it would appear that the code test free Tech program is working just as we had expected it would in defending our VHF/UHF spectrum from other interests.

Of course under the "trickle down" theory, some of the growth due to the code test free Tech license has found its way to HF as well, but not with the same percentage growth rate as on VHF/UHF. Thus HF usage does still appear relatively stagnant, just as 220-222 MHz usage did before it was taken.

The HF broadcasting committee is still floating the idea of digital stereo SW broadcasting (the alternative of a move to SSB broadcasting appears to be dead in the water). So there still exists a potential threat to amateur HF spectrum from that quarter. And as I mentioned,

a number of utility services are eyeing returning to HF using digital techniques and ALE in preference to the more expensive dedicated GEO satellite links to which they moved in the 1980s.

The digital SW broadcasting proponents have a potentially potent system. They say that the entire receiver can be reduced to a single consumer chip, that the consumer would merely enter the station he wished to hear and the radio would automatically find, lock onto, and decode the station's signal. Unlike SSB, very little user skill or intervention would be required. Since it can be reduced to a single consumer chip, receiver cost wouldn't be out of line with the needs of the SW broadcast listening audience either. This makes it very attractive to the broadcasters (and the receiver manufacturers).

A similar system is currently undergoing trials for use in the standard AM broadcast band (I've had the opportunity to witness some of those tests, it works astonishingly well, the 50 watt digital signal duplicated the coverage of our 50,000 watt AM transmitter while delivering full stereo audio of a quality at least equalling conventional FM broadcast). This is something we need to be watching closely.

The AM and SW broadcasters have to do *something*. They're seeing their audiences disappear to FM domestically, and in the future to DAB satellite both domestically and internationally (consumer DAB has already come to Europe). If they don't radically update their technology, they're history. The stereo AM debacle shows that baby steps won't do it. They have to leapfrog the competition's offerings, or they won't be able to attract the consumer's attention.

Aside from conventional analog FM broadcast, which continues to be "good enough" (for now) for the voice and music uses to which it is put, nearly every other user of radio spectrum is going digital. TV is going digital, AM broadcast is very very likely to go digital, SW broadcast is likely to go digital, utility stations will certainly go digital, cellphone is already going digital, etc. All of these moves will have impacts on spectrum requirements (some good for us, some bad).

These moves will also have impacts on the technologies available to us as amateurs. Leaded discrete components are already disappearing rapidly, and the move to digital will only accelerate that trend. Higher and higher levels of VLSI integration will replace discrete circuits. Most of a radio will reside in firmware. If we don't upgrade our methods and skills to deal with digital signaling, and learn to "build" radios in firmware, we'll be history too for the simple reason that if we don't all we'll have left to work with will be cat's whiskers, galena, and spark gaps (even ignition coils are disappearing on new cars, so the expedient of a Model T Ford spark coil is lost to us).

The handwritng is on the wall for those willing to read it. Things are changing, and changing increasingly rapidly. If we don't change with them, we'll be lost.

Gary

Ed, I can't believe that you are actually naieve enough to believe that
.. they're technical folks ... they understand the realities of
weak-signal satellite links ... they know that the 2m and 70cm are
already quite heavily occupied (by amateur standards, considering the
present state of technology in wide-spread use by amateurs). Actually,
if the ARRL IS naieve enough to believe what you said above, it should
immediately raise a serious question about the ARRL's ability to
"protect" our allocations by recognizing potential threats ...

They're not going to spend a few hundreds of millions of dollars to
launch their constellations of satellites and then passively accept the
interference they'd get ...

They're hoping to "get their foot in the door" ... plain and simple ...
and IF they do, once they launch their systems and "discover that their
sharing plans don't work after all" they'll be back at the FCC in a
heartbeat, complaining about interference and seeking to "move the hams"
.. guaranteed!

>73 de Jim - KF6CR
>
>
Jim,

So in the future, when, whether present CW fans like it or not, there will likely be diminishingly less CW activity as younger hams adopt newer, more efficient modes, the present amount of spectrum should be allocated for CW?

Remember ... in most of the CW bands, those new-fangled digital modes are already authorized ...

Also, in the future, there will be digital alternatives to SSB ...

As a result of the inevitable march of progress, there should be no "permanant guarantee" of a set amount of spectrum for ANY mode ... times will change, usage patterns will change, and we have to be prepared to adapt ...

73,
Carl - wa6vse

Again, unlike spark (which was a major source of wide-band interference), CW (which does not present the same problems) should NOT be banned, just not mandated ... we have to be VERY clear about this, or we start a "they want to ban CW" panic amongst the CW adherents ...

Zack,

I am happy (really) that YOU enjoy CW ... great, fine, keep it up, have
at it ..

All the technophiles amongst us are saying is that we don't share your
interest ... we want do do other things that have absolutely nothing to
do with CW ... so we see NO sense in requiring someone to waste the time
and effort to "jump through a hoop" that has no value to them and
demonstrate a "skill" that they will probably NEVER use again ...

My point is that your previous implication that Drew only hear old folks because he lives in Florida was rediculous.

Drew could be (an likely was) hearing folks from all over the place.

That's the point that I was making ...

Tony,

Why should the ham gear manufacturers spend the time and money developing truly state-of-the-art stuff when huge numbers of hams think that the "old-hat" technology they're currently making is "wonderful stuff?"

As Gary pointed out, even 1200 baud packet is so incredibly faster than CW that, by comparison, it's "blazingly fast" ... it's sad that more hams don't have the technical knowledge to realize how backward the gear that's available to them actually is ...

>links for several services.
>

Right, Gary ... I suspect that the reason that the pro-code folks
can't see it coming is that CW is all they can envision HF as being
useful for ... unfortunately for them (and the rest of us who are
saddled with their short-sighted, unimaginative influence to date on the
regulatory structure) there are others who are more imaginary ... and
they will find uses for HF like the ones you suggest.

>56 kb packet *is* old hat. We've been doing that for 8 years. It's

>

And we'd better be perceived as pushing technology forward, or someone
else will come along and try to apply a "Pioneer's Preference" argument
to themselves to reallocate our HF spectrum for their new use ... in
this regard, adherence to CW does NOT "cut the mustard" ...

>We need to shift our paradigm away from the telco model of high
>speed trunks and low speed local loops. Reality says amateurs
>must use high speed local loops and lower speed trunks.

This is an interesting concept ... I'm not sure I agree that it's
necessary (or completely correct) but I need to think this one over
a bit ...

>seen by some as a handicap, but it isn't really. Traffic analysis
>shows that the most intensely interactive and content rich traffic
>will be local, with less frequent and less demanding need for long
>distance traffic. With the proper paradigm, this can be a quite
>successful and useful model.
>

Same response as previous paragraph ...

>Much of our current amateur radio long distance traffic is highly
>redundant and low in information content. That can easily be
>compressed into more compact and efficient form. In many cases,
>complete messages can be compressed into a single symbol or
>small number of symbols. In theory, any message can be expressed
>as a single Godel number. In the past, this hasn't been practical
>due to limited computing resources. That's changed. While we

>as closely as possible) or recursive TIL based methods of compressing
>content (Java is an example of a way to reduce traffic on
>the network while still maintaining the illusion of a highly
>interactive connection for the user).
>

The average CW proponent is probably wondering "What the hell does
coffee have to do with the code?" ... :-)

>As long as we can forego highly novel content rich exchanges, we
>can utilize HF trunks with 8x less throughput than our local loops
>without creating significant bottlenecks.

But must we sacrifice content? I don't think so ...

>Especially for interactive
>exchanges, HF links are better because they have lower latency.

I'm not sure I understand why anything other than HF *must* have
(significantly) high(er) latency ...

>Latency is the real killer of interactivity, and it increases in
>direct proportion to the number of relay hops used, and decreases
>only marginally with increased trunk speeds. By replacing dozens
>of UHF hops with a single HF hop, we can keep latency down enough
>to more than make up for the relative ratio of trunk speeds.

>

Again, interesting ...
This, of course, applies to "current" 1200/9600 baud AFSK packeet
"technology", but I don't beleive that it has to apply to *all*
techniques that could be applied above HF ...

However, the idea of using HF clearly has merit ... perhaps as an
adjunct to other means in some applications and a replacement to other
means in some? ... if the "network" is designed properly, the medium
should be (at least relatively) transparent to the application ...

>By using improved signal modulation codings and demodulation
>techniques, we can achieve 9600 baud on HF without excessive
>bandwidth consumption.

This is correct, but to an extent panders to the idea that using more
bandwidth is inherently "bad" and inefficient ... which I know *you*
know is not true ...

>And we can use ALE techniques to take
>advantage of the MUF to the maximum extent possible for the
>path being traversed at any given hour. This will minimize
>the store and forward delays which currently plague HF messaging.
>

Yup ...

>We will need to produce a better dynamic routing protocol than
>the mostly static ones we use now. We need for the network to
>be able to self-configure and self-heal with minimal stored
>central information and with minimal operator intervention.
>We can't really develop this on VHF/UHF since the paths there

I think there is more of a problem than that. The courts have held for many
years that, because of its inherent nature, all radio transmissions are
interstate commerce. The U.S. constitution specifically allocates the right
to regulate interstate commerce to the federal government.
The U.S.Congress cannot abdicate this responsibility without amending the
constitution.

Perhaps these bozo congresscreatures have some other agenda on their minds.
...like mebbe legislating that pi is exactly 3.0.

...the $64 question is, how do people who are this ignorant get elected?
answer: Their constituencies are even more ignorant that then are.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Heathkit? Homebrew? Well maybe it is home soldering, but "insert lead,
: solder two" isn't my idea of homebrew. I don't want to belabor this
: too much since it's off the main topic, but if you don't put a bit of
: creative energy into the project, in my mind it is just work at home
: electronics assembly, something minimum wage workers are hired to do
: (or more recently, what assembly line robots do).

That's true, Gary. My point, although I didn't make it clear, was to contrast kit assembly with buying gear and plugging it in. It gave me the sense of having participated in the process of getting equipment on the air, not to mention a heightened sense of how these things worked. At the time I was an air traffic control radar tech, so ham radio and kitbuilding were the logical extensions of my job at the time.

I never did feel qualified to design much of anything, as my only formal education in the field of electronics dealt with the aspect of maintenance.

: I suppose that if you don't *have* to do it for a living it can be
: considered fun, some people sure do enjoy building kits, and pride
: of craftsmanship certainly has its place, but something a bit more
: creative which engages the brain as well as the eye-hand coordination
: might be even more fun. I have in mind, of course, the design phase
: of a project. The actual assembly phase is just drudgery as far as
: I'm concerned, a necessary evil to get to that "ah ha!" stage where
: the project passes the smoke test and actually meets design expectations
: (or more commonly does *not* meet expectations and leaves you with the
: fascinating task of debugging to see what went wrong).

Right; if I were able to design equipment, the actual assembly might be an anticlimax. I always did enjoy soldering components to PCBs, but dreaded the inevitable point-to-point wiring.

: >I would be willing to go for a no-code (or maybe 5 wpm; that isn't asking
: >that much) HF license, provided that there was no encroachment on the CW
: >portions of the bands, ever. My own theory is that, when the phone bands
: >become even more crowded, human nature says that there will be a grab for
: >the CW portions of the band.

: This is a legitimate concern. The data sub-bands could be put at risk
: if too much pressure were placed on the voice and image sub-bands. So
: we should encourage the use of data modes more on HF so that these
: sub-bands are better defended. Remember, you can use CW anywhere, not
: just in the data sub-bands. The data sub-bands are small enough now,
: and defacto are even smaller since the data users voluntarily restrict

: their spectrum usage to accomodate the CW users who tend to congregate
: toward the bottom of the data sub-bands. We wouldn't want these limited
: segments to become even smaller.

Glad I'm not alone in this thinking. But isn't this *really* what the code/no-code debate is about? I can't believe that most of the defenders of CW are doing so, just because they feel that everyone should have to pass a code test, simply because they did. There have been some counterexamples to the notion that CW is a lid filter, but I tend to believe in this theory to some degree. After all, very little, in real life, is 100% effective.

In college, I had to take classes that I deemed irrelevant to my science major, and would never use, but that's just part of getting the degree. In studying for my Extra, I have learned about every obscure mode of communications available to hams, although I will never use ACSSB or packet, in all probability. I did learn enough about spread-spectrum techniques to whet my appetite for this high-tech mode, though. Learning is never a total loss.

: Of course we could accomodate the voice users another way. We could
: switch from analog to digital voice techniques (preferably spread
: spectrum) and put voice on a more equal footing with the data modes.
: This would allow the abolition of the formal sub-bands entirely
: without incurring the bad manners we'd otherwise see. Such a switch
: is not implausible. It would be no more cumbersome to accomplish
: than the switch from DSB with carrier AM to SSB, and the benefits
: it brings would be similarly motivating.

I wouldn't mind giving this a shot.

: But then that other manual method, OOK Morse, would be the one whose
: users suffer from frustration. In that regard, we'd need a sub-band
: which was OOK Morse exclusive, a sanctuary if you will, for those
: wishing to use this manual method. Since such a sanctuary does not
: now exist, I propose the lower 25 kHz of each band be set aside as
: such a sanctuary. We could convert to SS CW instead, but I don't
: think that would fly with most CW enthusiasts. It is the very
: primitiveness of the technique which seems to be its main appeal.

Maybe this is just the right compromise, then.

THE WESTERN CONNECTICUT HAMFEST
Sponsored by the Candlewood Amateur Radio Association

Just 14 miles from the NY/CT State line!

Sunday, Sept. 15, 1996 0900-1400
Edmond Town Hall Route 6, Newtown, CT
Tables inside Tailgating outside
ARRL Sanctioned Handicapped Access
Door Prizes Ample Parking
Gourmet Fare Rain or shine

Talk-in 147.12/.72 PL 141.3

General admission $4.00 at the door (what a deal!)

Tailgating $6.00, inside table reservations $10.00 each, (both
include 1 admission), mail to:
Candlewood Amateur Radio Association, PO BOX 3441, Danbury CT 06813

For more info, phone (203) 790 7041 or (203) 438 6782.

Hope to see you all there.

>plate for the little LEOs probably honestly believed that they could be
>legitimate sharing partners. They are not looking to be primary in
>the amateur bands. I don't know whether they are seeking to be primary
>in any of the many other frequencies they put on the plate, but it is
>quite likely that they are not.

This little nugget of very important information was left out
of the original "Write Now!" announcement, and, I believe, that
was a grave error.

I recognized the "Write Now!" announcement as a clear invitation
to mailbomb the working group members, and therefore did *not*
write email - until I learned a little more. It wasn't very
difficult to figure out that the working group was looking to
find frequencies to share, not take over.

"What's the difference?" one might ask. Well, the difference is
simple - writing a thousand notes to the working group members
explaining how amateur radio is really important and 2m is
especially important didn't address the real issue. In fact,
I think it makes amateurs look a little stupid, since the
working group wasn't proposing to take 2m away but that's
how the amateurs behaved.

So, the working group was reminded that amateur radio is
important - is this something they don't already know?

The real issue has to do with how sharable the 2m and 70cm bands
are. It was fairly clear to me that the working group was assuming
that all of the activity on 2m and 70cm is homogenously NBFM. Of
course, this is false. There is weak signal and television activity

on these bands, things that the working group may not be aware of. These activities deserve protection, and the UHF ATV may present a greater interference problem than the working group expects.

When I wrote to the WRC97 alias, I asked that weak signal and experimental activities be protected. This might mean that the LEOs are permitted to operate above 144.5MHz on 2m, for example. The simple fact is, we, as a service, need to recognize the value and inevitable deployment of SS techniques. If we don't do it, someone else will, and our bands are as good as any others.

The original editorial from Sumner encouraged amateurs to write without revealing any of the technical issues, so amateurs just wrote in a blind show of solidarity. Maybe I'm alone in thinking this, but I believe it would be better for the perception of amateur radio if we're perceived as informed, thinking people that make our own decisions, rather than a group that blindly follows the political tide.

Please enlighten me oh great and powerful technican plus with a commercial license
from 1975 , holder of many patents and wearer of the sacred crown of wanting all
but not willing to work for it. Oh great and powerful Kar-el, tell us, what is this
great techno stuff of which you speak. Please be sure not to include that which
is used exclusively on the VHF+ bands, as they are not what is in question.

. But let the technophile rejoice in the newer and better
> >tools available to him as well. Don't burden him with a re-enactment in
> >which he has no interest and for which he has no need.

What tools Kar-el. You insipdly banter about new tecno tools yet when pressed have yet
to come up with one new anything.

Am I pro code, not really am i no code, no really. I'm no anything that gets something for
nothing. You have yet to offer anything, yet (whining mode on) I wanna be on HF, I
don't wanna work for it GIMME GIMME GIMME (whining mode off)

The offer still stands..6 conclusive reasons why code requirements should be eliminated (HF
bands only) and I will follow and become a no code crybaby like the rest. Remember, it has
to be real
answers, none of this in 10 years stuff. Current, present day and again, no referring to
the potential
kloss of VHF+ bands, since the no code license already addresses that

The world is waiting..survey sezzzzzz

Yes Carl, but the only problem is that Drew, by his own admission,
>doesn't own a radio<.

So, unless some old geezers in Georgia and Alabama are yelling
really, really loud, the only OLDE FARTZ that Drew hears are the
ones sitting next to him.

2611. WA State Patrol controlling your radios

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-07 00:00:00 UTC
From: kc7iay@ibm.net
Message-ID: <DxDwp1.BqF@eskimo.com>
Source record: 217350
Cross-posted to: rec.radio.scanner,wa.general,rec.radio.amateur.misc

The Washington State Patrol has proposed the adoption of a
Washington Administrative Code regarding wireless communications
systems used by motorists (not necessarly attached to vehicles).

The proposed WAC: [new section]: "WAC 204-10-045 Wireless
communications systems. Hands-free, wireless communication systems
may be used by motorists while driving a motor vehicle. Listening
devices that include an earpiece shall cover only one ear. Wireless
communication systems must be approved by the Washington state
patrol equipment review unit."

There will be a hearing held on October 9, 1996 at the General
Administration Building at the State Patrol's Commerical Vehicle
Division Conference Room, Ground Floor at 9am. Written comments
should be sent to:

Carol I. Morton
Administrative Assistant
Equipment and Standards Review Unit
Box 42635
Olympia, WA 98504-2636
360-412-8934

-=-

Comment by Bruce Miller:

There are three distinct parts to this proposed WAC:
1. Hands-free wireless communication systems is approved.
2. Listening devices attached a wireless communication system.
3. Approval of wireless communication systems.

There are several aspects of this proposed WAC that bother me.

There is no definition of "communication system" in WAC 204 or in
the RCW (Revised Code of Washington) that I could find that pertains
to this WAC. This means the WAC would apply to receivers and
transceivers.

Additionally, keep in mind the approval of the "communication
system" is not dependent, according to the wording, on whether it is
hands-free or two-way: "Wireless communication systems must be
approved by the Washington state patrol equipment review unit." Note
that there is no qualifying adjective before "wireless communication
system" to restrict it to hands-free or two-way.

Consequently, this proposed WAC can be interpreted to include receivers and transcievers, giving the Washington State Patrol the sole authority to determine what type or brand of radio equipment you could use in your vehicle--be it for am/fm, ham, CB, commercial, or cell phone, paging.

This proposed WAC is worded extremely poorly and should be thrown in the garbage because of its pervasive control over ALL radio equipment that could be used in the car (not just attached to it).

Even though I have not yet checked out how this would conflict with FCC regulations, it seems to me that the FCC has authority over the type of equipment I can use in my vehicle for transmitting.

Message-ID: <3232167F.730A@ccsnet.com>
Source record: 217353

Ham radio is so unappealing to the young:

1. I offered 14 year old KA1VBQ $10 to make a single 2 meter contact, she refused.
2. I offered N1XIY free GOOD 2M and HF gear, he is 16, he refused to use it.
Electrolux and ham radio both have something in common, what?

Burt

2615. Opinions / Spec's of Swan 250C

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-08 00:00:00 UTC
From: lespaul@nwlink.com

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I am contemplating buying a Swan 250C 6-meter rig.

Can anyone tell me anything about this rig? specifically:

1. Modes (CW/SSB I believe)
2. All tubes, or Hybrid?
3. Power output?
4. Band coverage?
5. Overall quality and opinion?
6. What is a fair price (including power supply)?
7. What is difference between 250 and 250C?

Any help or opinions would be greatly appreciated.

======
First of all you can only apply for a vanity call within the call
district associated with your current address. What you referred to
above only applies to relatives who can get a call sign from any
district. Since I live in VT I can only request a "1" area callsign.

As far as the Fedex courier pkgs are concerned the shipping address is
listed on the back of the application form. I called the FCC and they
basically said that if you want to FedX your application, put your
application in a separate envelop addressed to the mailing address
also shown on the application form. So basically you have a FedX pkg
with an addressed envelop inside. They stressed that this CANNOT
arrive prior to Sept 23rd. I guess this is the biggest problem they
feel will occur as people will get too anxious - esp in the heavily
populated call districts.

Anyway hope this helps.
Les

i have a th79e and i have never see anything to program it
if it is how for the others tx/rx (motorola ...) it must be do via
an interface conected to the microphone of the tx
But the interface is only sell to the professionals ! (you can t but
it to kenwood)

For the th79e you have mods to do : 118-174 300-399 400-470
800-999 and repeater mode ! what to want to do more ? cofee ? :))

Rich -

The "Big Deal" about this is that it is just another increment of "creeping" government interference with our daily lives. In this case, potentially harmful RF sources are excluded, while amateurs are now facing more unfounded nuisance complaints from uninformed and obstinate neighbors who simply don't like our antennas. And, in todays society, people don't worry about the legitimacy of their concerns, and they don't communicate with the individuals involved.

Instead, they just yell "wolf" either to law enforcement organizations or to the courts through their ambulance-chasing attorneys. And the bureaucrats love it because it gives them further job security. And, we all know what attorneys do for money!

Amateur radio does not need this added risk of harassment without just cause which any of us with visible antennas will be faced with. It must be turned around.

Have things really gone this sick since I was first licensed in 1959? I am sorry to say the answer is YES!

73,

Ron - W0OSK

Just a question,
If, as you say, Mr Clinton is a marxist liberal who is lying to appeal to the mainstream America.... then what does that say about the Mainstream America that his lies appeal to? I mean, who then IS mainstream america if they want to hear what he says and then vote accordingly? Think about it....
By the way.. Isn't this the wrong forum for this stuff?
Greg..

>their attention.

There is no reason to think that the volume of response would be any
more or less "sheer" if there wasn't a codeless tech license. The one
thing that the 220mhz spectrum loss taught amateurs was the ability to
mobilize when our spectrum is threatened.

>I feel comfortable estimating that a significant number of the response came
>from "no-code" Technicians.

I don't believe there is any legitimate basis for this feeling. Is there
any reason to suspect that the ratio of codeless techs that responded
is in any manner higher than the ratio of other license classes that use
VHF on a regular basis?

Selling my Icom Z-1A with detachable face plate. Brand new, I just got
it a month ago, but have gotten a car rig, so am departing with the
HT. I have the tone squelch, pocket beep, Rechargable battery case,
Ni-Cd batter, leather case, antenna, origianl docs, and box.
I bought it for $450.00, I'm selling it for $350.00 OBO. Not a
scratch on it, I have the origianl box and everything.

Thanks

Hello, Folks:

I have just put up my new home page and invite all to drop in for a look. Included at the site are the following areas:

Ham Radio -- Mostly packet, mostly high speed

Pipe Smokers -- Very, very much still under construction

Astronomy -- Mostly Amateur Radio Astronomy (good 2nd interest for Hams!)

Mapping -- Mostly about elevation maps

Heartland Internet Services -- Lots of Web Presence information

The URL to use is:

http://www.trucom.com/ppages/marty

Thanks!

Take Care & 73

>Thanks,
>Ian
>ianls@patrol.i-way.co.uk

Hi,

Ionospheric Crossmodulation happens wherever two radio signals, one of which should be fairly strong, hits the ionsophere at roughly the same place. The non-linear nature of the ionsosphere mixes the signals as if they were being mixed in the front end of a receiver. In simplistic terms, it's a bit like overloading part of the ionsophere<g>

Hope that helps

Joe, G0RNC

You are correct.
But why pick on me?
Look at all the code posts, are you telling me they are not redundant?
Look at what hams say, they are original?

EMERGENCY FUNDING

The following is an important closed circuit advisory. Attention all
bulletin stations. Newsline is once again on the verge of bankruptcy and
existing hand to mouth. We urgently need your support to survive.
As we have said many times, the decision whether Newsline stays or goes
is yours. If you want this service to continue, we will need your ongoing
financial support, and it is needed right now. The address for the Newsline
Support Fund is:

NEWSLINE SUPPORT FUND
P.O.Box 660937
Arcadia, California
91066

This ends the closed circuit with Newsline report number 962 for release
on Friday, September 6th, 1997 to follow.

(*****
The following is a QST

A Wisconsin senator wants to turn controlling Radio Frequency
Interference over to state and local governments and some of the Arizona
police jammers turn out to be Explorer Scouts. This and more on a special
extended Newsline report number 995 coming your way right now!

(*****
WISCONSIN SENATOR SEEKS LOCAL CONTROL OVER RFI

A Wisconsin Senator has decided to unilaterally try to rewrite the
nations communications law because he does not like it that the FCC no
longer handling consumer interference cases. Acting in response to what he
says is nearly 45,000 complaints to the FCC every year, first term Senator
Russ Feingold as introduced Senate Bill 2025. Feingold says his measure
will give state, county and local governments the ability to regulate
interference from CB radio. This, when interference results from a
violation of FCC rules.
Saying his bill simply allows common sense to prevail, Feingold reasons
his measure would give states and localities the ability to investigate and
enforce Federal law, "thereby protecting the rights of their residents.
The bill would only affect unauthorized CB transmitters or amplifiers.
Municipalities could prohibit use of the equipment and levy fines or other

monetary sanctions. It has already drawn strong opposition from personal communications and business radio user groups. They fear that states and cities will abuse this new power if its ever made available to them.

(*****
WISCONSIN CB LAW

In a related matter, the City Council of Beloit, Wisconsin has enacted a new ordinance that gives the city the power to enforce FCC regulations on CB interference. This, after receiving numerous complaints from local residents of interference to home electronic equipment.
While the bill is an explicit reversal of the total Federal preemption over telecommunications matters granted by the Communications Act of 1934, it contains a provision reaffirming the continued Federal preemption in handling other types of RFI.
Senator Feingold says that he tried to enlist FCC's help in investigating constituents' RFI complaints without success. He says that the FCC told him it no longer investigates RFI complaints and offers only a packet of self-help information for the consumer to limit the interference on their own.
Several CB groups indicate that they plan to challenge the Beloit, Wisconsin ruling in federal court.

(*****
ARIZONA JAMMERS WERE SCOUTS

Two of the three people busted in Mesa, Arizona for jamming police and ham radio communications were members of the local police department Explorer Scout Post. This according to Allen Sklar, AA7BJ, who reports to us via e-mail that the story about the arrest made the front page of several newspapers in the Mesa and Phoenix area.
Newsline also spoke to the Chairman of the Arizona Repeater Association interference committee who explained how the hams and the police got together to make the bust:

"In going over my interference reports, I noticed that some had said that they heard they thought these same guys on their scanners interfering with the police department. So I called the Mesa Police Department and once we got past the initial suspicion and who are you and how do you know about this stuff. We determined that it sounded like we had the same people causing interference on both sides. And we offered we know who they are. Would you like them? And they said yes we would like them very much."

Because of pending investigations we cannot reveal the identity of the Arizona Repeater Association representative you are hearing. He does say that the association has been advised by the Mesa police that two of the people arrested are legally minors and that all three suspects have admitted their guilt. Now all that's left is to bring them before a judge:

"When they were presented with this list of interference. They admitted that, yes that was them. They had done all those. So at this point, I believe it is just a matter of a judge determining what the fines will be.

But, there are multiple felony and misdemeanor charges against all of them. I think for the minors, it will amount to a lot of community service and probably some pretty heavy fines. And for the gentleman that is not a minor, he could see jail time."

For ham radio the sad part of the story is that all three have been identified as licensed radio amateurs, one having passed a Morse code test.

(*****
ARRL WRC CW SURVEY

Tod Olson, K0TO, the Chairman of ARRL's WRC 99 Planning Committee, needs input the ham radio community with respect to opinions and attitudes in the ham radio community regarding the future of the CW mode. Olson's committee is running a survey in the current issue of QST Magazine. Its found on pages 49 and 50 in September issue. If you want your voice heard on the no-code issue, cut it out, fill it out and mail it in, today.

(*****
CURRENT FCC FORM 610 IS STILL GOOD

Most FCC Form 610's are still good. This according to the ARRL Letter that says unlike the expiration dates on perishable food items in the grocery store, the expiration dates on the FCC Form 610 can be safely ignored.
The League says that lots of hams have asked about these dates. This, because an expiration date of August 31, 1996, appears in the upper right hand corner of current FCC Form 610 that were issued in November 1993 and in March 1995. It says the August 31, 1996, expiration date is an internal FCC reference date only. It is not a date to instruct the public when to stop using the form.
The FCC says the November 1993 and March 1995 issued FCC Forms 610 are okay to use and will continue to be acceptable for use until further notice.

(*****
FCC EMPLOYEE WANTS VANITY CALL SIGN

A former FCC employee who was told to give up a vanity call sign says he wants to keep it and he is fighting back. Arthur H. Feller, KB4Z, of Fairfax, Virginia has written a letter to FCC Chairman Reed Hundt protesting the commissions withdrawal of the vanity call sign W4ART. According to the W5YI Report, Fellers' losing the W4ART call sign was the result of a probe by the FCC into call signs awarded to hams that the commission says may have received other calls' through favoritism in the mid 1970's. Feller maintains that he did legitimately hold the W4ART call sign for almost six years and that the commissions action in withdrawing it is clearly unsupported by current FCC Rules and Regulations.
Feller wants to know why the current Commission is singling out former FCC employees for special, unequal and harsh treatment. He is also very upset that the commission made public a copy of the letter notifying him that the W4ART call was being withdrawn. This, before he had a chance to

file a response.

(*****
THE KENWOOD REPORT

The Kenwood Report is the latest ham product from Kenwood Communications Corporation. It fulfills the companies promise to expand the information needs of hams as well as fulfilling part of its own marketing strategy. The Kenwood Report is a bi-monthly ham radio newsletter specifically geared toward ham radio clubs in the United States. The Summer '96 sample issue provided to us covered Kenwood employees involvement in Field Day '96, several very brief new product announcements, a story on the Colorado Big Horn Amateur Radio Museum, a feature story on one of the unseen members of the Kenwood product development staff and a tribute to the Strauss family of York, Pennsylvania that operated the ham store JRS Distributors from 1925. Also included was a very strong point position editorial in opposition to the attempted takeover of the two meter and 70 centimeter bands by the Little LEO satellite group.
The Kenwood Report is four pages of photos, news and information with very little direct advertising. For information on obtaining it write, on club letterhead only, to the:

Kenwood Report / Amateur
P.O. Box 22745
Long Beach, California
90901-5745

(*****
TAPR GROUP PURCHASE

Tuscon Amateur Packet Radio and Motorola have agreed on a special group purchase of the Motorola type DSP 56002 Evaluation Modules. This is a general purpose DSP board with on board peripherals and software for assembling and debugging code.
For more information on the special limited time purchase, please see the TAPR web page at:

http://www.tapr.org

For details on the Motorola DSP products visit their web page at:

http://www.Motorola-dsp.com

AO-13 - YOUR LAST CHANCE

Amsat Oscar 13 may be on its way to a fiery end, but its not dead yet. So says James Miller, G3RUH. Miller reports via the AMSAT Bulletin Board that drag has not been quite as severe as initially estimated. This has allowed AO-13 to be moved for a final session at a favorable attitude. The duration of this orientation is unknown, but on or before November 1st, reorientation will be necessary. Re-entry is expected for the second week of December.

(*****
SHUTTLE DELAY

Hurricane Fran has forced the Atlantis space shuttle off its launching pad, delaying by several days the return of U.S. Astronaut Shannon Lucid from Russia's MIR Space Station. Atlantis was due to be launched on the 14th as we said, but will now face a two day delay. Space Agency officials said that the shuttle could be back on the pad as early as Thursday morning September 6th.

(*****
SAREX STS-79

Astronaut John Blaha, KC5TZQ, will be delivered to the Mir space complex for a long duration mission. While on board, he'll share Mir duties with Cosmonaut Aleksandr Kaleri, U8MIR, who first used that call sign in 1992. On board will be Valerij Korzun who'll use the R0MIR club call sign, and Claudi Andre-Dechays, using F6MIR.
As an aside, Mir astronauts get commercial audio linkups with their families every week and video linkups every two weeks. Family members report that the video doesn't work half the time, and the audio, while acceptable, has bad echoes. Most perfer SAREX or Mir ham radio contacts which all say sound the best.

(*****
HAM ASTRONAUTS TRAIN FOR MIR MISSIONS

Astronauts Wendy Lawrence, KC5KII, and Dave Wolf, KC5VPF, have been selected to train for stays aboard Russia's Mir space station.
Lawrence is a U.S. Navy commander. She'll begin a four month stay on Mir in September 1997. Wolf will replace Lawrence on Mir in early 1998. Wolf, a medical doctor, will be a member of both the Mir 25 and 26 crews during his four-month tour in orbit.

(*****
ARRL INTL HUMANITARIAN AWARD NOMINATIONS OPEN

The nominating period is now open for the annual ARRL International Humanitarian Award. Any licensed radio amateur worldwide, or group of amateurs who, by use of their skills of Amateur Radio, have provided extraordinary service for the benefit of others in times of crisis or disaster, is qualified to receive the award.
Nominations will be accepted by the committee from a licensed radio amateur, governmental or any other organization which has received the benefits of the radio amateur's extraordinary service. In the event that no nominations are received, the committee may determine possible recipients or may decide to make no award in a given year.
All nominations and supporting materials for 1996's award must be submitted in writing in the English language by December 31st. Mail nominations to the:

ARRL International Humanitarian Award
225 Main St
Newington, CT

06111

(*****
JOTA '96

Jamboree On The Air, or JOTA, is an annual Scouting and amateur radio event sponsored by the World Bureau of the World Organization of the Scouting Movement. It is always held during the third full weekend of October.
This years Jamboree On The Air is from Saturday, October 19th at 00:01 hours local time, to Sunday, October 20th, at 23:59 hours local time.

(*****
NEW ARRL SCOUT HANDBOOK AVAILABLE

Still with scouting, the ARRL Educational Activities Department has published a new booklet, the ARRL Scout Handbook, for use with Boy Scouts and Girl Scouts. The booklet includes information on the Boy Scout Radio merit badge and tells how to become a Boy Scout Radio merit badge counselor. It also has a suggested proposal for a Girl Scouts Amateur Radio Patch. Other sections explain how to get involved with the annual Boy Scouts Jamboree on the Air, as well as general information on ham radio and ideas on how to recruit Scouts to Amateur Radio.
The book is about Scouting and Amateur Radio and is available free of charge. Send an 8 1/2 by 11 inch self addressed, stamped envelope with 78 cents of postage, to the ARRL Educational Activities Department for your copy.

(*****
UK YHOTY

From overseas, word that the United Kingdom's Young Amateur of the Year presentation was made at the RSGB HF Convention to 16 year old Leroy Kirby, GW0ULC, from the town Cardigan in Dyfed. His selection earned him a prize of 300 pounds from the Radiocommunications Agency. He also received a guided tour of the Radio Monitoring Centre at Baldock and a general coverage receiver.
Leroy Kirby is actively involved in his local amateur radio emergency service and is the vice chairman of a YMCA amateur radio club. He is an avid contester and has an interest in packet radio as well.
The runner up was 15 year old Charles Banner, G7UBA, from Birmingham. Charles is a one of that nations youngest GB2RS newsreaders and promotes amateur radio through special event stations and teaching newcomers on a Novice Licence training course.

(*****
TEEN TO FORM HF NET

Here at home, word from fifteen year old KK5ZK of Lakeview, Arkansas that he is interested in starting a teen ham radio High Frequency net. Brad says that this would be a good opportunity to encourage hams with a no-code technician to upgrade and those who are inactive to get on HF and get a chance to meet other young hams. He is asking your advice on where

and when to gold such a net. Please send your input via e-mail to:

KK5ZK@juno.com.

(*****
DX

In DX, the operation planned for Rotuma Island by 3D2AG has been postponed until late October or November. 80 through 10 meter CW and SSB is definite. Some 160 meters and RTTY could be on tap as well. QSL via the callbook to 3D2AG only.
Also, EA6BH will be active from Cogo from October 16th to the 22nd as 3C1DX on SSB. Some RTTY is possible on 14.088 kHz as well. QSL via EA6BH.
And 9U5CW in Burundi has decided to temporarily suspend his ham activities. This due to what Alfredo terms security concerns. No word when he plans to return to the air.

(*****
WHERE IS KEN SESSION K6MVH?

Finally, Newsline needs your help in locating someone essential in the production of our upcoming 1000th anniversary show. We are trying to locate the ham who is considered the father of modern day ham radio bulletins, Ken Sessions, K6MVH.
Actually, Sessions may now be the former K6MVH as he has not been listed in the FCC database the past few years. Several people have told us that Ken may be in the Denver, Colorado area involved in the distribution of audio compact disks. A check of the Denver and surrounding prone books has yielded no result.
Ken Sessions is probably best known as the author of numerous books detailing the early days of FM and repeaters. He also did a stint as the Editor of 73 Magazine in the late 1960's. Earlier on, during the late 1950's and early 1960's, Sessions tongue in cheek Newsbeat ham radio newscasts were all the rage in California. We have some of his material on tape, but we would love to have Ken join us in person or on the phone for our anniversary celebration. After all, Ken Sessions started it all.
So, we are turning to you our listeners. If you know a Kendall Webster Session that used to hold the ham radio call sign K6MVH, let him know that Newsline is trying to reach him. Tell him that we want him as a guest on our anniversary show. He can call us at (805) 296-7180 anytime 24 hours a day.

(*****
And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE
P.O.Box 660937

In that case then, you are what is known as the "minority". During your tenure as the "minority" you may voice your opinion as loudly as possible and participate in the whole process to the fullest extent possible. Four years from now then you will have the opportunity to be in the "majority."

Jeff

We see these kinds of "remove the code" restrictions, every time the sun spot cycle drops "10 mtr"
propagation to next to nothing. As the sun spots come back up, & 10 mtrs gets more active, you will less &
less "squacking". Read what ever meaning you want into this post....

If they're poor countries, I doubt they'd be pushing for a technology for
amateur radio as opposed to computer based. I can see the senerio now..

Yes Mr. (whatever) of 3rd world country. We need ham operators like
you to improve our conditions. We therefore require you to spend 10 years
wages on the FT1000D. I sincerely believe that amateur radio is not the means
for moving a country into the 21st century.

> > USA has dominance in many many things, including amateur radio

On what is this based?? The american market represents a small percentage of the total
amateur world population and in dollars spent. If this theory were true, the entire world
would have a non-code (no the term used) license class. Last time I looked only 3 or 4 did.
What makes anyone think that old phrase still plays true " What's good for the USA is good
for
the world??""

Couldn't see an email address,callsign etc. so I'm unsure whether
you're in USA or Europe!!
In Europe,most ATV is on 24Cms & 10GHz bands using FM Video
modulation,almost the same as used by analogue satellite receivers.
Indeed,most people's receive setup uses TVRO parts.
IN USA,they're "behind the times" in that most ATV uses AM Video
(often on 70Cms band which uses a lot of the available bandwidth).
I know that HRO (Ham Radio Outlet) in USA lists some ATV gear.
There's also an outfit called "ATVQ" who were at Dayton hamfest
when I attended 3 years ago.They had European & USA books on
ATV.
There must also be a national organisation for ATV in the USA.
OTOH,if you're in Europe,give an idea of location or callsign &
I'll respond with where to get info & equipment in Europe.

Chris Muriel,Manchester,England (G3ZDM)

>Funny, all the new technology you propose seems to be geared towards
>VHF+.

A rash (and incorrect) assumption on your part ... only those who can't envision it wave their hands and assert that there's no possibility of new technology for HF ... that's the problem ... you can't see past the past.

>A no code license is perfect, where's all the techno-weinies
>you keep saying that code holds back???

A no-code license is NOT perfect ... it has created a ghetto of no-coders in the VHF/UHF bands ... most are not "upgrading" because they don't see CW as "upgrade" in any respect ... and they resent being relegated to second-class citizen status (or worse) by a group the "CW cult" that (for the most part correctly) technologically backward ...

>why aren't they perfecting new amazing techo-wizardrey for the VHF+
>frequencies??
>

Many are ... but many more still think ham radio is archaic because of the code ... they also have too much pride and self-respect to subject themselves to the treatment they see current no-coders receiving from narrow-minded, bigoted individuals and groups who worship antiquated technology as some sort of quasi-religion ...

>
>
>Tell you what Kar-el. You give me 6 convincing reasons how a no code HF license is
>going to save the HF bands, where code is being used on a regular basis, and I will take
up
>the cause.
>

I doubt that you'd "take up the cause" if God himself told you it was a good idea ... as I said to someone else, you'd probably just mutter something about "'nuther damned no-coder!"

>I want YOU to cite examples of HF band loss, how the HF bands are under attack
>by commercial interests. How the HF bands will benefit by the increased numbers
>of operators. In short, tell me a great a wise sooth sayer, say me some sooth
>

The HF bands are not under attack at this moment (to the best of my knowledge), but they WILL be in the next 10 years or less if we don't grow a great deal and start to push the technological forefront in HF .. I guarantee it ... satellites are expensive, the geostationary orbital arc is getting crowded, and third world countries are demanding (and getting) their "piece of the pie" satellite-wise ... in the not-to-distant future, many business and industrial users will look to HF again (using newer technologies that will blow CW out of the water).

But I doubt that you have the vision and open-mindedness to consider that ... it's much easier to stick your head in the sand, both politically and technologically ...

Where were you a week ago when about a dozen other people said the same thing?

As I pointed out then ... the newsstand price is a hell of a lot more than the discounted subscription that is the essence of "membership" ... from the "only reason I joined was to get QST" responses and e-mail I've gotten it looks like a very large portion of the "members" are, like me, in fact "subscribers".

Like I said ... I have no illusions/delusions that ARRL will EVER represent my interests or the interests of the true majority of US hams .. it's a publishing empire, first and foremost, run by a bunch of folks who have found a clever way to avoid getting real jobs ... beyond that, it's a "good old boy" club, plain and simple.

Anyone who sees it differently is fooling himself ...

>if the ARRL IS naieve enough to believe what you said above, it should
>immediately raise a serious question about the ARRL's ability to
>"protect" our allocations by recognizing potential threats ...

The folks proposing this are *not* technical folks. They are *lawyers*
representing *marketeers* working at Beltway consulting companies.
I'm quite sure there *is* a technical type somewhere in the background
slapping his forehead and crying, "Are you *nuts*?", but his isn't the
controlling voice here, and I doubt the lawyers could understand the
issues if they were explained to them. When marketing and legal get
together, engineering can only duck for cover.

>They're not going to spend a few hundreds of millions of dollars to
>launch their constellations of satellites and then passively accept the
>interference they'd get ...
>
>They're hoping to "get their foot in the door" ... plain and simple ...
>and IF they do, once they launch their systems and "discover that their
>sharing plans don't work after all" they'll be back at the FCC in a
>heartbeat, complaining about interference and seeking to "move the hams"
>.. guaranteed!

That's certainly the outcome to be expected. What Ed is saying is that
the lawyers proposing this little LEO grab may not yet realize that this
would be the ultimate result of attempted sharing. I'd add that they
probably wouldn't care if they did realize this. In that regard, a
technical document is really of no value in changing their positions.
They are unlikely to be persuaded that actions which would result in

further legal work for them could possibly be a bad thing.

This issue will have to be settled *politically* and *economically*,
not technically. Somebody in authority is going to have to fear he'll
lose his job over this before the issue will be settled. In that regard,
the ARRL call for public outcry has been a correct response. It strikes
directly at the politics of the issue by directly confronting the
political appointees ultimately responsible for the outcome with
a block of voters who are outraged at the grab attempt.

The committee chairman, and his political masters, have to feel the
heat. As long as they could deal in relative obscurity, cutting deals
in the backrooms of DC law firms, amateur radio interests were dead
meat. But once their activities were exposed to the strong light of
public scrutiny, they've been forced to scurry for cover, like
cockroaches when the kitchen light is turned on.

On the economic front, the potential licensees for this little LEO
operation have to be alerted that they will face *intractable*
interference from the disgruntled former occupants of the spectrum
grabbed. It has to be pointed out *forcefully* that there is no
practical way to enforce cessation of interference in this spectrum.
There are too many radios, and too many users, for the government
to deal with effectively. CB is the premiere example that the government
cannot effectively control spectrum where they don't have majority
voluntary compliance from its users.

Today, other amateurs have an incentive to hunt down and deal with
sources of interference in this spectrum, but if it becomes no longer
amateur spectrum, that incentive will be gone. The government has
demonstrated an inability to deal with the problems. There is little
or no reason to believe that will change in an era of decreasing
enforcement budgets and staffing. And the prospective little LEO
operators aren't flush enough to take the enforcement task upon
themselves. If even the mighty "phone police" can't effectively
control cellular fraud, what's the chance a LEO startup can deal
with the (oh so easily generated) interference to their operations?

The ARRL's technical document can't hurt. It will illumine the real
technical issues. But it won't determine the outcome. That's political,
and it is political muscle which will win or lose it. Fortunately,
amateur radio's political muscle has grown by 33% since we lost the
last grab for our spectrum. It appears to be enough, this time, but we
need to grow it even larger for the times ahead when the grab attempts
will be more seriously pressed.

First, I'd like to take note of your equation of "poor countries" and
"3rd world country" ... (just a note, that's all for the moment)

Second, I would submit, based on your previous postings, that you are
too shortsighted and narrowminded in the technical sense to see the
tremendous potential that amateur radio has for helping developing
nations interest and train people in communications technology ... for
countries where entire villages may exist without a single phone, even
the current backward state of ham radio looks pretty good as a
technicnological starting point ...

>> > USA has dominance in many many things, including amateur radio
>> > hobby. This means that quite a large portion of the world follows what

>On what is this based?? The american market represents a small
>percentage of the total amateur world population and in dollars spent.

OK, now back to the "poor countries" and "third world countries ... for
the most part, the existing hams there are relatively affluent ... they
are the professionals and the business owners ... and they operate the
same level of "rice-box" technology as most US hams ... so the argument
that "you have to use CW to talk to the impoverished ops in DX
countries, 'cause all they can afford are CW peanut-whistles" is false.

Given that the existing hams have rigs, we're talking about bringing in
more upper-economic people who would buy rigs and we're talking about
training poorer people ... who might well build government-subsidized
kit rigs ... but they wouldn't be CW rigs, because no government in its
right mind would consider that an adequate starting point.

>

How so? I have no respect for a ham who hasn't a clue about how his radio works and got his license by passing a multiple guess test simply because he was able to memorize a sufficient number of questions from a pre-published pool ...

I and others who have proposed that the CW test be dropped are not looking for "welfare" ... we've almost universally stated our support for making the theory part of the exam more meaningful.

>> As for the commercial license equivalent, I passed that in 1975, too.
>
>I got mine in 1972, and you point is????
>

The point is, someone said they'd support a no-code HF license with tougher theory testing, on the line of the old commercial phone tests .. which were comparable in depth and difficulty to the current extra class written test ... I simply said, "No problem, been there ... done that."

I would submit that if you're going to try to "take a shot" at everything I say, you're going to need ammunition of a more appropriate caliber. (Your "gun" is a bit on the small side, too, it would seem.)

That's the beauty of amateur radio. It is for the non-professional
designer. You don't need a formal degree to do amateur design, just
a desire to do it and a willingness to read a few books and *experiment*.
Ok, so your designs don't always work. That doesn't matter. You aren't
being paid to do it, your family's survival doesn't depend upon it. You
do it because you want the challenge, and to learn something new. The
most valuable education you get isn't formal, it's what you learn hands
on as you pursue objectives throughout life which has the greatest
impact.

>code/no-code debate is about? I can't believe that most of the defenders of
>CW are doing so, just because they feel that everyone should have to pass a
>code test, simply because they did. There have been some counterexamples to
>the notion that CW is a lid filter, but I tend to believe in this theory to
>some degree. After all, very little, in real life, is 100% effective.

I don't think Morse testing is a LID filter. I believe people value
a thing (like their license) for what it enables them to do, today
and tommorrow, and not for what they once did to get it. So I don't
buy into this argument that people behave because they once had to
perform a manual ritual to get their license.

And I don't think the majority of the vehement Morse testing defenders
are actually closet SSB operators who want to protect their spectrum

from overcrowding. Oh, I'm sure there are *some* who have that as their motivation, but not most.

I think a larger number of those people are simply of the "I had to do it, so should you" school. They had to pass the hazing ritual, and may have hated it at the time, but now *they're* the insiders and want to inflict the ritual on those who come after them. They get a sort of perverse thrill out of passing on the pain. It is, in a twisted way, their way of striking back for what they endured but were powerless to avoid.

Then there are those who truly love using Morse, but who are fearful that it is slipping away. In their heart of hearts, they realize it is obsolete, and fear that without the forced government recruitment of the Morse tests, most people wouldn't bother to learn it, but would instead embrace a better method. They've seen all their arguments for its utility crumble as one by one other services have abandoned it. The Coast Guard's abandonment was the cruelest cut of all for many. Now they see amateurs who want to abandon it too, and that scares hell out of them. Their one prized skill is being devalued, and the only way left to keep it alive is to appeal to government protectionism, welfare for Morse, in the form of tests and restricted frequencies.

>In college, I had to take classes that I deemed irrelevant to my science
>major, and would never use, but that's just part of getting the degree.

>communications available to hams, although I will never use ACSSB or packet,
>in all probability. I did learn enough about spread-spectrum techniques to
>whet my appetite for this high-tech mode, though. Learning is never a total
>loss.

Yes, it is true that colleges (most often those who pretentiously claim the title "university") often require you to take courses extraneous to your major field. They offer many excuses, but mostly the claim is that doing so "broadens" you as a person (but eating too many Ding Dongs can do that too). Trade schools are more practical. They teach you what you need to know about what you want to do, and leave it at that. If you want to get fat on your own, that's up to you.

Licensing isn't supposed to be broadening. Its purpose is to satisfy the government that you know enough not to be a danger to yourself or others on the spectrum. Of prime importance is avoidance of interference to other services, such as life safety services. That was the justification for Morse testing in the era when life safety services only has Morse as a way of warning amateurs off from causing interference to their activities. That justification is now moot.

>: Of course we could accomodate the voice users another way. We could
>: switch from analog to digital voice techniques (preferably spread
>: spectrum) and put voice on a more equal footing with the data modes.
>: This would allow the abolition of the formal sub-bands entirely

>: users suffer from frustration. In that regard, we'd need a sub-band
>: which was OOK Morse exclusive, a sanctuary if you will, for those
>: wishing to use this manual method. Since such a sanctuary does not
>: now exist, I propose the lower 25 kHz of each band be set aside as
>: such a sanctuary. We could convert to SS CW instead, but I don't
>: think that would fly with most CW enthusiasts. It is the very
>: primitiveness of the technique which seems to be its main appeal.
>
>Maybe this is just the right compromise, then.

I think so. I'd hasten to add that CW would not be *restricted* to
just these sanctuaries. CW operators could play on the freeway too
if they liked. The purpose of these sanctuaries is only to give a
proetected place away from heavy traffic in which to play with less
powerful methods in relative peace.

>*We have antenna restrictions imposed upon us by neighborhood boards, others
>don't
>*We work SSTV, the others don't
>*We debate on the radio newsgroups, the others don't
>*(still under construction)
>

Of the above, the ONLY one that serves ANY continuing purpose from the prospective of meeting our regulatory raison d'etre is "build and modify radios". The development of moonbounce and meteor scatter techniques was forward-reaching stuff ... in the 1950's ... other services have made use of, and advanced the state of the art in, those modes FAR beyond the stagnant "novelty" use hams have made of them.

Some of them are actually VERY dangerous and detrimental to the future of ham radio ... the worst being "We think of radio as a hobby." This has been carried so far that there's no sense of responsibility to the real reasons for the existence of the Amateur Radio Service ... public service and experimentation with and development of technology.

>If you actually believe that passing huge files of data via the digital
>modes that most hams will never read is efficient communication then
>you've got to quit hitting the bottle.
>

This is your bias, and does not measure up with reality ... file transfer and bbs forwarding are by no means the only use for digital modes ... you lack of vision and understanding of the potential uses for new digital techniques is, unfortunately, common, but non-the-less incorrect.

>But if you want to be like the other services, John, then join them. The
>Army and Navy will certainly train you to work their gear. Their mission
>is *very* different from ours, though.
>

Again the "Do it OUR way ... the way "real hams" do it, or stay the hell away!" ... a WONDERFUL invitation to prospective newcomers to our ranks, right? (Its' clear to me that it's INTENDED to drive them away .. so "your" HF bands don't get too crowded, right?)

So sad ... ham radio is so desparately in need of a vision of BETTER ways, but it insists on clinging to OLD ways ...

>together, engineering can only duck for cover.
>

Gary,

It's rare, from what I've seen, but here we disagree ... I DO believe that the technical folks *specifically* wanted 2m and 70cm ... the bands are technically ideal for their proposed operation and all of the surrounding spectrum with similar technical characteristics is "owned" by commercial interests with far more political and economic clout than us hams. (Part of my career was involved in the mobile satellite industry ... I'm quite familiar with some of the players.)

The lawyers are just "hired guns" and do what they're told.

I think they all (technical folks and lawyers) *quite consciously* tried to slip one past us and get a recommendation for reallocation from a government committee. They were hoping that the committee would say something like "Let's see, what have we here? Public safety? Nope, can't move them, nor trucking, nor the utilities, nor the taxi companies .. hum ... wait a second ... here we go ... we'll just move these hams ... shouldn't be more than a few thousand of them inconvenienced and they've got other bands ..."

With their foot in the door like that at the committee, they'd be much more potent adversaries.

>the radio sits on. Now I tune up and find almost no one to talk with.
>A real bumber...

You can miss the old days as much as you want ... they won't return.
Those that try to stand in the way of progress have, historically
speaking, eventually been run over by the steamroller.

That will happen to the die-hard "keep the code" folks at some point,
too. It's inevitable. The only questions are "when?" and "how?"
If it comes soon, we may just be able to save ham radio from being run
over by the steamroller, too. If we wait too long, I'm afraid ham radio
itself will end up as technological "road kill."

Mike,

I believe I remember hearing somewhere that Drew is a student. Perhaps he has access to a club station.

In any event, the list of things Drew talked about hearing on HF was pretty close to reality ... and that should count for something, even if you don't like Drew.

There were also several responders who said, essentially, "Yes, that's a big proportion of what I hear, too ... and it IS pathetic."

That's true. The Commission is charged to allocate spectrum in much
the same way as Zoning boards are charged to zone property. They are
to give precedence to the "highest and best use".

>>We need to shift our paradigm away from the telco model of high

>a bit ...

Please do. It is the central concept which needs to be understood.
We don't have the resources to install high speed GEO relays, so

we are constrained by physics to HF, and that simply won't support
a number of T3s.

>>seen by some as a handicap, but it isn't really. Traffic analysis
>>shows that the most intensely interactive and content rich traffic
>>will be local, with less frequent and less demanding need for long

>>successful and useful model.
>
>Same response as previous paragraph ...

Even the telcos understand this. It is tempting to speak of the
"global village", with someone halfway around the world being as
close as your next door neighbor. But the reality is that you
have more frequent interactions with your neighbors than with
those more distant. That's generally because you have more in
common with people in your area than with people further away
who you probably don't even know exist.

The internet is in some ways a contradiction of that. The flat
rates tend to allow communities to form who are geographically
dispersed. But still, if you want to play Doom, it's more likely
you'll do it on your local ethernet than with someone on the
internet on another continent. Even relatively fast trunks have
limits, especially when they are shared by the whole world.

>>Much of our current amateur radio long distance traffic is highly
>>redundant and low in information content. That can easily be

>>
>
>The average CW proponent is probably wondering "What the hell does
>*coffee* have to do with the code?" ... :-)

Tsk, tsk. Just because they like CW doesn't mean they don't know
about other things. In particular, the ARRL numbered radiogram
idea was originally a construct of the CW relay networks of its
era, so the idea of dictionary data compression isn't foreign
to the CW operator. He might not have thought about it as a
powerful compression method before, however.

>>As long as we can forego highly novel content rich exchanges, we
>>can utilize HF trunks with 8x less throughput than our local loops
>>without creating significant bottlenecks.
>
>But must we sacrifice content? I don't think so ...

Highly novel rich content, yes. We don't have the bandwidth to
do otherwise over long distances. Even if we used *all* of our
HF allocations strictly for data, and used the best currently
known techniques, we'd only have the equivalent of 6 T1s *for
the world*. Those T1s wouldn't be exclusively for our own use,
they'd be shared with every other amateur on the planet. And
of course because of propagation, we could only use a fraction
of that capacity at any given time. So if every amateur decided
to web browse at the same time, each would have a throughput
of about 1 bps. It's not really that bleak. Propagation helps
as well as hinders. We can practice quite a bit of frequency
reuse because of propagation. But *we* don't dictate to the
ionosphere, it dictates to us, so any extra throughput we
get may not be to places we want to go at any particular
time. So we need to be parsimonious with the resource that
we have.

>>Especially for interactive
>>exchanges, HF links are better because they have lower latency.

>>
>
>Again, interesting ...
>This, of course, applies to "current" 1200/9600 baud AFSK packeet
>"technology", but I don't beleive that it has to apply to *all*
>techniques that could be applied above HF ...

It applies to any packet switched technology. Each switch must
wait until it receives an entire packet to determine if it is
valid, and to determine where to forward it on. Then it must
transmit that packet. It takes just as long to retransmit it
as it took to receive it, so effective channel baud for that
message is halved with each relay. This is the reason multiple
hops introduce latency. On a 6 hop path, the effective baud for
that message is 2^6 less than the basic baud used between
switches. In other words, a 9600 baud channel effectively has
the round trip delay of a 150 baud channel if it has to go
through 6 hops.

Of course if the traffic isn't interactive, and has a *huge*
sliding window at the end to end transport level, we can
pipeline. The latency is still there, but because we can
keep the pipe full, the amount of data sent remains consistent
with a 9600 baud channel. That's useful for bulk mail, but
isn't much good for interactive things like web browsing or
interactive games.

>>By using improved signal modulation codings and demodulation
>>techniques, we can achieve 9600 baud on HF without excessive
>>bandwidth consumption.
>
>This is correct, but to an extent panders to the idea that using more
>bandwidth is inherently "bad" and inefficient ... which I know *you*
>know is not true ...

Well, we have finite bandwidth. We can use it in a number of ways.
SS uses it one way, narrowband technique uses it another, but the
available bandwidth is still finite, and the amount we use of it
still remains the same whether we take it in thousands of little
slices or all in one lump. There are advantages and disadvantages
to either approach. (For disorganized amateur radio, SS has more
advantages than deficits.)

>of SS techniques. If we don't do it, someone else will, and our
>bands are as good as any others.

Dana, you're looking at the wrong side of the coin. The relevant
"sharing" issue isn't the interference the little LEOs might cause
to us. Though it might be a nuisance for some, we could live with
that, just as we've lived with military radar on 70cm.

The real issue is amateur interference *to* the little LEO mobile
terrestrial users, and to the satellites themselves. SS or not,
and several of the little LEO players don't propose SS, the near
far problem means our strong local signals will clobber the weak
satellite signal for nearby terrestrial users. And the aggregate
of our signals will fill the passband of the satellite receivers
too, to the point where AGC must act. This would cause intolerable
loss of service for the commercial users. They won't accept that
for long. And that's when the sharing ends, and the amateurs get
kicked off the bands.

So this is really a political problem after all. Do we keep our
bands, or do we lose them to a commercial service? That's the
real question.

Someone asked about the FCC Ruling regarding TV antennas. I lost track of who asked but here is the info.

A new FCC Ruling regarding TV antennas has created quite a stir in the Amateur Radio Community.

The full 30 pages of FCC Ruling 96328 can be read, printed and downloaded from:

http://www.fcc.gov/Bureaus/Cable/Orders/fcc96328.txt

Hmm now lets see -- a log periodic from 50 Mhz to 1.2 Ghz covers the TV Broadcast Band --- Right???

This is not correct. While a majority may not be upgrading (not
surprising since the codeless license was specifically created
for people with no interest in HF) a sizeable amount of those who
enter through the codeless license do in fact upgrade to higher
licenses.

Very good point, Patrick. My wife is an EMT and also a ham. She has complained to me in the past about people with scanners getting in the way. She cannot tell how many are actually hams because usually they are only holding scanners. Some have other hand-held equipment, but she can't tell for sure if they are hams, CB'ers or just using other commercial frequencies.

My friend Mike, who is a fireman and also a ham has bitched and moaned about the same thing. He does not care for on-lookers at all, but his pet peeve is the hams who whip out their ARES cards and act like they have some authority at the scene, when all they do is get in the way. He says that they have plenty of communications in most circumstances, but when those rare moments pop up, they will ask for assistance. Sort of a "Don't call us, we'll call you" thing.

With all of the whining you read about 220 being taken away, they forget one thing: only part of the band was taken away. At least we still have 3 Mhz of the band left, but is it getting used? Not in my area. You would figure that the whiners will flock to the ham radio stores to buy 220 equipment to keep the remaining part of the band, but it hasn't happened. The worst part about it is that UPS is not even using the lower 2 Mhz. I never hear anything on there.

From: df1hx@flux.isys.net
Message-ID: <DxEyEH.Bn@flux.isys.net>
Source record: 217258

Hi !

I am licensed for about 1 1/2 years, my age is 45 years.
After passing my test i did not care for CW at all, however on
a fieldday in '95 (my 1st one) i met some fellow hams, they brought
a tiny Knwd TS-50 trx, hooked it to the beam and operated with a
straight key and 50 watts worldwide. This fascinated me and my mind
told me: you have learned CW and passed the test, you can do this too !
I decided for training myself to do one CW QSO per day at least.
I was thrilled by my first contact to JA with 100 watts and my
R7 vertical antenna. I started CW operation with a straight 'Junker'
key, however switched to paddles after some months.
I am still fascinated how far i can get with my 100 watts and the
R7 vertical, i live in a city (Hamburg) and i do not want to use
PA due to TVI and other interference problems in this highly populated
area.
On HF i do CW only, except some operation via our local 10m repeater,
and i even do CW on 2m/70cm sometimes.
BTW, our licence classes here in Germany are different, 3 only:

C = 'smallest' ticket, no-code, no HF
A = 30 characters/minute CW receiving/sending test, restricted
HF access
B = 'biggest' ticket, 60 characters/minute receiving/sending test
full access to all Ham-band as defined for IARU region 1 .

So why did n1xiy bother to get a license? Seems like a lot of work to memorize the Q&A's then refuse to accept your free gear. Unless all that gear stinks of alcohol and tobacco. Then again, maybe his parents told him never to accept gifts from strangers.

Are you still using the voice modes to communicate? Voice is just about
as old as CW (1920s); remember this next time you're yacking on 2M.

>As Gary pointed out, even 1200 baud packet is so incredibly faster than
>CW that, by comparison, it's "blazingly fast" ... it's sad that more
>hams don't have the technical knowledge to realize how backward the gear
>that's available to them actually is ...

Do you have live 2-way conversations on HF packet? (If so, the speed of
the QSO is limited by the person with the slowest typing speed.)
What is the time element between when a message is sent and when
it arrives at its destination on HF?

It's ironic that in your quest to "force" hams to use higher tech
gear you'll actually be causing a decline of what they'll be able to
build at home. I don't think that's in keeping with Paragraph 97.1.

I feel quite proud that, unlike many of the folks on here, I am able
to enjoy my own favorite mode just by using my given mental faculties,
rather than relying upon complex equipment. And it's wonderful to share
a common mode with all the world's HF licensed amateurs.

This reminds me of a television show I saw.

A cop goes up to a door and knocks. A woman answers. He asks, are you
missus so-and-so. Yes, she replies. He informs her that her husband
is dead, killed in a head-on collision with an 18-wheeler tractor/trailer.
She breaks down in sobs. The cop starts laughing hysterically.
Then the punch-line "Mrs. So-and-So, guess what? You're on TOTALLY SADISTIC
HIDDEN CAMERA!"

(well, it was amusing parody of the ridiculousness of of network
television at the time...)

2667. RCS2200 mode - Camus mode radios -- where to get them?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-09 00:00:00 UTC
From: ljubisic@EUnet.yu
Message-ID: <5127di$b36@Solair3.EUnet.yu>
Source record: 217157

Hi!

I am having a little problem. I have to expand our company's radio system, and I have to purchase radios with DTMF keypad (we have also radio-phone system), but they have to be RCS 2200 - Camus mode compliant. We are using Motorola MX3000 (Stornophone7000) devices at the moment, but due to it's price and quantity we would like to buy, we are seeking for some cheaper solution. (By the way, I heard something about some new software for MX3000. Anybody has it? What are new features, if any?)

So, I was told that Alinco's DJ-130 model is Camus compatible, but local dealer couldn't confirm it. Also, I heard that DJ-182 with its Al-trunk logic board (which operates with CTCSS) could be MODIEFIED to be Camus mode compatible. Is there anybody from Alinco who could tell me if this is possible, and how?

Also, one friend told me that ICOM-H16T (#17), with Logic-A-Unit (EP701, PCB B1580H) is Camus mode compatible, and he wasn't sure, but also told me that ICOM IC-F30LT with UT-96 5 tone unit is also Camus capable. But, same thing as with Alinco, local delares couldn't confirm or deny it. Anybody knows it? Is there any e-mail contact in Icom where I could check it?

And finaly, it doesn't have to be Alinco or Icom, it could be also Yaesu, Kenwood, Standard, Harris... but I have to know is it Camus mode compatible, and how to order such option or modification from manufactorer/dealer.

If anybody knows something about it, I would like to ask him to send me a note _by mail_, since I wouldn't like to miss such importnat message by skiping it somehow in newsgroup.

Thanx for understanding!

SB QST ARL ARLB060
ARLB060 Hudson director resigns

ARRL Hudson Division Director Paul Vydareny, WB2VUK, has resigned, effective September 5, 1996. In a fax to ARRL Executive Vice President David Sumner, K1ZZ, Vydareny cited job and church obligations as preventing him from doing what he considers is a proper job of fulfilling his duties as director. Under the provisions of Article 7, Vice Director Richard Sandell, WK6R, of Scarsdale, New York, becomes director for the remainder of the term, which expires January 1, 1997. Last April, ARRL President Rod Stafford, KB6ZV, appointed Sandell, 58, as vice director of the Hudson Division to fill the seat left vacant when Stephen Mendelsohn, WA2DHF, was elected first vice president and Vydareny, then Eastern New York section manager, succeeded Mendelsohn as division director.

Sandell is an ARRL life member and a past Hudson Division assistant director and Eastern New York section manager. He is president and CEO of Aura Technology Corporation. His wife, Phyllis, is KD2OG. The couple's three daughters, Alyssa, Karyn and Sylvie, also hold ham tickets.

ARRL Bulletin 62 ARLB062
From ARRL Headquarters
Newington CT September 10, 1996
To all radio amateurs

SB QST ARL ARLB062
ARLB062 ARRL Petitions FCC To Change Safety Rules

The ARRL has petitioned the FCC to reconsider and reverse portions of the Commission's August 1, 1996, Report and Order that imposed RF-emission safety standards on Amateur Radio, including a 50-W threshold to trigger an RF-safety evaluation. In setting the 50-W threshold, the ARRL said, the FCC failed to consider the effect of antenna height, antenna gain, emission mode, duty cycle or operating frequency. The League asked the FCC either to scale the evaluation threshold by frequency to match the maximum permissible exposure (MPE) limits--directly corresponding to the way the regulations scale the exposure levels with frequency--or to set the evaluation threshold for all HF operation at 150 W at a distance of 10 meters from all parts of the antenna.

At or below that power level and at that distance from the radiator, ''you'd be well on the side of safe, even at 100 duty cycle, with any antenna likely to be encountered on HF,'' said ARRL Laboratory Supervisor Ed Hare, KA1CV, our HQ staff liaison to the ARRL RF Safety Committee. ''Some VHF/UHF and microwave station configurations could result in an RF exposure exceeding the requirements of the regulations, so the 50-W limit to trigger an evaluation is more appropriate above 30 MHz,'' said Hare. He emphasized that all stations, regardless of output power or frequency, still must abide by the specified MPE limits for RF.

The new rules, effective January 1, 1997, require licensees of amateur stations running 50 W output or more on any band to conduct a routine RF-safety evaluation to determine if the station could expose people to RF levels that exceed the MPE limits specified in the new rules. (Mobile installations using push-to-talk, regardless of power, are exempt from the environmental evaluation requirement.) In its reconsideration filing, the League called the 50-W threshold ''regulatory overkill'' and ''without scientific basis.'' Among other

things, the League said the means to conduct RF radiation evaluations are not yet available, and the ability to reconfigure a station that might exceed the new limits ''is highly problematic.'' Coupled with any state and local land-use and RF-exposure regulations that might exist, application of the new rules ''may constitute a de facto revocation or modification of the station license,'' the League said.

The League also said the FCC adopted the rules ''through flawed procedures'' and without advance notice and opportunity for prior comment.

The ARRL said that the new rules differentiate between ham stations and other Commission licensees ''which are treated far less restrictively.'' While the FCC preempted state and local government regulation of personal wireless service facilities based on environmental effects of RF emissions, it refused to do the same for ham radio ''without any basis for the distinction.''

The ARRL already has asked the FCC to extend the deadline to change amateur examinations and modify question pools, but the Commission has yet to act on the request. The League said that, as it now stands, hams have no way to determine the scope of their obligations under the new rules.

The League suggested the FCC vacate its new RF safety rules governing amateur stations and issue a further notice to permit comment on the proposed rules, and, in particular, the 50-W evaluation threshold.

Well it looks like my cyberpost program has caused a bit of a stir. Below are a few questions that anyone of for you may answer.

Should the EME/UHF/Microwave/ distance records have an * next to the record if their schedules were set up by any means other than through an RF contact?

Should DX expeditions be barred from advertising what their operating band, frequency, and mode is going to be in ham radio magazines?

If these DX expeditions are so adverised, should the countacts not count for a DXCC?

Pretty silly isn't it---I hope you get the point.

It is often difficult for us to accept paradeim shifts. The use of the internet to set up contacts for ham awards programs is such a shift.

The internet is not going away, and if we are going to bring new hams into the hobby (remember the LEO's are knocking at our door), we better find a way to bring more young people into it. Cybersheds blend the fast growing internet with ham radio, in an effort to take the best of both communication modes and use it for improved world wide communication. This just might challenge some of our young computer brethren to try out ham radio. After all, with a cybersched, they will not need a KW + and a beam up 100 ft. on 20 meters to get through the stateside QRM. Maybe that will be appealing to new hams!

New paradiems are always hard to accept, but finding a way to combine the internet with ham radio might be a necessary step if our hobby is going to survive as we move into the 21st century. 73's Ray

If folks without full HF access like yourself are so concerned about improving HF comms, what's stopping them? One doesn't have to be licensed in order to contribute. (The staff of our cancer research institute is contributing to the search for a cure to cancer, yet they don't *have* cancer; see the analogy?) Why not put this altruism you claim to feel for us low-tech HF operators to work instead of just talking so much?

But before you burst an artery worrying over our state of technology on HF, consider that those of use who use HF daily might be quite happy doing what we've been doing for the last n years. It will probably raise your blood pressure, but I'm going to continue building and operating CW transmitters for many years to come. Too bad you'll never know the excitement of talking to someone thousands of miles away on something you've build yourself from scratch.

>service and experimentation with and development of technology.

In our Basis and Purpose, outlined in Paragraph 97.1, public service is
one of five items listed, and it is of course the most important item -
but it's not the only item. When there are no hurricanes, tsunamis, tropical
storms/flash floods, earthquakes, volcanic eruptions, threatening Hawaii,
then amateur radio is a hobby to me. Hence, less than 1% of my operating
operating time is associated with county civil defense/races. That percent
figure varies among all of us, but I would guess we're all in the under
10% catagory (of course, we'll certain hear from the exceptions). The
remaining 90+% falls in the hobby catagory.

Item 97.1(e) in our Basis and Purpose speaks of the amateur's unique
ability to foster international good will - I interpret that as giving
the green light to have *fun* with the hobby and work lots of DX; that's
done on gear I've built myself (what homebrew rigs do you operate, Karl?).

>This is your bias, and does not measure up with reality ... file
>transfer and bbs forwarding are by no means the only use for digital
>modes ... you lack of vision and understanding of the potential uses for
>new digital techniques is, unfortunately, common, but non-the-less
>incorrect.

Are you able to carry on real-time two-way comms with your fad modes? If so,
then isn't the speed of transmission limited by one's ability to type?

If you're passing bulk data, how long can it take for that data to arrive
at it's destination? I've heard folks say it can take days. Seems silly.

>Again the "Do it OUR way ... the way "real hams" do it, or stay the hell
>away!" ... a WONDERFUL invitation to prospective newcomers to our

>ranks, right? (Its' clear to me that it's INTENDED to drive them away

>So sad ... ham radio is so desparately in need of a vision of BETTER
>ways, but it insists on clinging to OLD ways ...

Are you still using voice communications? The first voice transmission occured in 1915 (VA to Paris; xmtr used 550 triodes). Remember that next time you key up your 2M CB HT.

Are you still using a telephone communications? Geez, Karl, that's device is well over 100 years old.

You'd be locking out those who passed a code test but didn't use the
code after receiving their license. The number of hams renewing their
license would drop dramatically.

While you're certainly correct about the near/far issue, keep
in mind the LEOs are apparently looking a huge part of the VHF and
UHF public service bands. If they don't think they can cope
with local NBFM users, then *all* of these bands are in danger.

I don't think this is the case.

Bullcrap! The codeless license was specifically created for people with no interest in ***CW***.

What you said is rather akin to the old southern voter registration arguments that "Black folks don't care a lick about voting anyhow ..."

The fact that our current code-free license class neglects to provide HF access was the result antiquated ITU rules, antiquated ARRL thinking, and other factors totally unrelated to the desires of the prospective licensees.

That's the point I was making, too, Gary.

And I maintian that they (the Little LEO folks) know this full-well and
that the "sharing" thing is/was/has_been_from_the_start nothing more
than a ruse to "get their foot in the door."

Then, as you put it:
>And that's when the sharing ends, and the amateurs get
>kicked off the bands.

It will be interesting to see if the first threat against our HF bands
attempts to use the "sharing" ruse, too.

Dana, this is some very important information. I would appreciate
your sharing the actual proposal with this group, including your
source(s). If you could post an excerpt from the *real* proposal, that
would be most enlightening and allow us to put all this nonsense about
a VHF band threat behind us. It would have even been better if you
could have let us in on the true story earlier to help avoid this
tremendous embarassment to amateur radio.

>"What's the difference?" one might ask. Well, the difference is

Only due to a lack of information that *you* KK6JQ possessed at the
time (and we stupid hams, including presumably Sumner, did not).

>So, the working group was reminded that amateur radio is
>important - is this something they don't already know?

I would agree, to say the least, that they know the amateur radio
'frequencies' are important. I doubt that from a business perspective
they care about the higher sense of importance that you are referring
to. But, even if we are to be optimistic about the motives of industry
lobby groups, why did they not contact ham radio representatives prior
to issuing the proposal rather than surprising everyone? "Surprise "
can be an intentional, strategic move. In business, it usually is. And
you seem to really embrace this idea of band sharing as having no
technical difficulties, as if it has neglibile impact. Do you simply
request a QRL everytime you want to transmit or do you just wipe them

out (or be wiped out as we are in 40m)? I'm not ready to take that leap.

Hams were taken by surprise. There was not nearly enough time to assess the impact of sharing IF indeed that is what they proposed. Why didn't they want to discuss this with amateur lobby groups ahead of time? No matter, we should trust them. We must believe that the world of commercial telecommunications is a nice and rosey place. Correct Dana?

Glad I'm not alone in this thinking. But isn't this *really* what the
code/no-code debate is about? I can't believe that most of the defenders of
CW are doing so, just because they feel that everyone should have to pass a
code test, simply because they did.

I believe that it is one of the most important reasons. Very few would
admit that, though.

I have been around for some 15 years and I am a member of the HSC. I
have always liked CW. I have also met many people who dislike CW very
much, and yet they are perfectly good radio amateurs. I feel sorry
that the majority of amateurs want to stop those perfectly good
amateurs from getting into HF just because they do not like CW.

I am especially sorry for that due to the fact that not all of those
who want to keep CW requirement in the test actually use it themselves
that much. There are even hams who have not used CW themselves for
decades and yet they want to keep the CW requirement.

I have often wondered how the general opinion would change if
we all had to take the test every two years or so in order to keep our
licences. (Like the pilots have to do.)

On what is this based?? The american market represents a small percentage of the total amateur world population and in dollars spent. If this theory were true, the entire world would have a non-code (no the term used) license class. Last time I looked only 3 or 4 did. What makes anyone think that old phrase still plays true " What's good for the USA is good for
the world??""

A small percentage, oh really? Perhaps it is then Canada which is filling the North American Callbook, not the USA.

The US politics does indeed follow in a very tough way that phrase "What's good for the USA is good for the world". There are excuses but that's the way it is. And it is the fact that USA is the major economic and military power. Therefore rest of the world listens very carefully what the USA has to say. We like it or not, that's the way it is.

It should not be a big surprise that people tend to behave in groups. They listen to the others and form their opinions based on the opinions of the others. I have personal experience on that quite recently regarding to my tower (yes, troubles, I'm glad there are courts). Children who are playing and world politics are surprisingly similar. Amateur radio regulations are no different from other politics.

"If I could have let us in on the true story earlier"? Take it
easy, Dan, there was no true story required to see we were being
asked to mail bomb the working group. I did not know why,
but I knew what we were being asked to do. Are you suggesting that
I should have somehow tried to stop all the thousand people
from writing because the request looked wrong?

Well, the thing that kept me from writing at first was a suspicion
that we were being asked to mail bomb some folks without knowing
exactly what was going on.

Then, about a week after the ARRL editorial was distributed by email,
the following note was posted on 6/6/1996:

>Subject: The "Candidate Bands" list as of May 7

>Dave

As you can see, Dave Sumner had this information at the time amateurs were asked to write. This alone was adequate to make me strongly suspect that more was going than we were being told.

It didn't magic knowledge or insider info to discover that the LEO folks were thinking about some very, very popular frequencies.

As you'll see in the QST article since, my suspicion was correct that the LEOs believe they can share. So, Dan, I'm not sure I understand your accusatory tone - someone told me the sky was falling, and my skepticism made me think twice before running out and protesting. I believe the ARRL wanted a volume of letters regardless of content, which is what came to pass.

2690. JA Amateur License Class -- changes

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-09 00:00:00 UTC
From: Joe Fitter BV/N0IAT <FITR%mimi@magic.itg.ti.com>
Message-ID: <32349B98.45D3@magic.itg.ti.com>
Source record: 217273
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc

Hi,
I have recently learned that the JA License classes have
been restrucured. In the past, license class
determined maximum legal transmit power -- i.e. no frequency
limits except no-code (VHF and above) and novice (no 20M etc).

Based on the latest JA ham magazines, it seems these "power"
classes have changed. Could any JA hams advise me of the
details?

thanks,
Joe

I don't use SSTV, RTTY, and rarely use SSB yet I was required to take a
basic theory (multiple guess) written exam on those modes. Why should
I waste my time and effort demonstrating a knowledge of these modes that
I'll probably NEVER use?

I'm also one of the crowd who enjoys CW. I'm 35 and have been pounding
brass since I was 15. A few years ago I could copy short CW burst as
fast as 60 wpm. My current copy speed is probably more like 45wpm.

I've never had fancy gear or big antennas and have always found CW much
more efficient in making long distant contacts (especially with low SNR)
which is a part of the hobby I most enjoy.

If the decision to drop the CW requirement is made, I hope it's coupled
with specific freq ranges set aside for CW only so we can continue
enjoying the part of the hobby we most enjoy - INTERFERENCE FREE.
And IMHO that does not include sharing space with the current digital
modes like PACTOR, SITOR, RTTY, etc.

72>From: <72527.01012@compuserve.com>
72>Subject: Re: The party is over for CB

72>>Gary, KF9CM wrote:

72>>Well boys and girls the party's over for CB. This means that the local
72>>police will arest and fine you if it passes. The Bill reads out as
72>>follows:

Legally, all S2025 says is that local authorities are not preempted from
exercising police powers. It does NOT GIVE them powers automatically.
All it says is that local governments CAN pass their OWN laws if S2025
passes the House into law.

72>> S 2025 IN 104th CONGRESS

Let me yank out an important sentence from the posted bill text:

72>> ... For purpose of this
72>> subsection, home electronic equipment includes, but is not
72>> limited to, television receivers, radio receivers, stereo
72>> components or systems, video cassette recorders, audio
72>> recorders, loud speakers, telephone equipment and other
72>> electronic devices normally used in the home.

Note the four words "is not limited to." If one thinks about that
rationally rather than emotionally, an amateur radio station could be
interpreted as "electronic devices normally used in the home." Anyone
using a ham station regularly in their home would qualify to be the
COMPLAINANT to get state, county, or local police to use their powers
against a citizens band station operating unlawfully. Even a crystal
set receiver is an "electronic device," using electrons, and solid state
at that.

1. Amateurs have been complaining bitterly about CB for 39 years. Here
is a chance to GET THEM, provided S2025 passes into law AND local
governments pass local laws against CB interference.

2. Under older rules, an amateur radio license should be visible at the
main operating station of the license holder. A $3 simple glass
frame (available at department and chain drug stores) can hang the
ticket in plain view. Police can read. Really. It's in THEIR
rules.

72>You better hope and pray that the bozo cop who gets dispatched to
72>investigate an interference complaint is technically qualified to judge
72>what is a CB station and what is a ham station.

Hang your ticket out in PLAIN VIEW, fer crises sake. CB operators do
NOT have licenses. A document issued by a federal agency gets noticed.

72> One listen to our local
72>"boys in blue" will show you that a lot of them are incompetent at using
72>their own two-way equipment, and now we are putting them in charge
72>of deciding what is legal and what is not?

I've had the opportunity to listen to several hundred "bozo cop"
conversations at a scanner enthusiast's place. LAPD, BPD, GPD all sound
like professionals at police work. The use their radios as _tools_ in
their police work, just as utility services use their radios as _tools_
in their utility work or pilots and ATC use radios as _tools_ in their
aircraft movement work. From every other radio services' point of
view, amateur radio procedure sounds "unprofessional."

If S2025 goes into law AND local laws are enacted to hit the CBers, then
it behooves the local amateur community to visit the local police and
EDUCATE them in what an amateur station contains, explain that every ham
is under regulatory action and rules of ethical conduct to NOT interfere
with any "civilian." This establishes a better rapport with the police.
Their major work is FOR you on the 99+ percent of crimes that might
happen to you. Snarling at police never wins points.

72>Don't be too quick to celebrate my fellow hams!! The whole bill stinks,
72>and anything that is passed that will affect your CB neighbors could
72>possibly affect you too! Even if it doesn't, how long do you think it will
72>be before they pass a bill giving the states permission to enforce interfere
72>from ham stations, cellular phones, cordless mikes and anything else that em

If you want action agains S2025, then here's a suggestion that works on
every other proposed bill in either senate or house, federal or state:
Get the address and telephone number of your senator's local office (in
Los Angeles, the white pages have government numbers up front ahead of
alphabetic listings). Call the office by telephone and state your
wishes in a RATIONAL manner (elected representatives get all kinds of
folks madder than hell about something). Rationality has much more
impact than anger, believe it or not. Take the time to write your
wishes, again in a RATIONAL manner, and send that to your senator.

More important, get your NON-ham friends interested, get them to help
you, make a petition with lots of signatures if you can. Use the
Internet to "red-dog" a senator or representative that way; e-mail
alerts the official's staff. If the staff sees a lot of BOTH
surface mail and e-mail, they tell their boss pronto. There are many,
many more non-hams than hams and elected officials represent ALL
citizens. Do the same with your federal representative. A bill that
passes the Senate HAS to go into the House for vote before it becomes
law (and vice versa). But...act NOW...this bill was introduced some
time ago. Grousing back and forth on the internet with other hams
doesn't do a damn thing. Contact the wonderful League and make them
work for you if you are a member.

72>We have to stop any bills from passing that will give interference
72>enforcement rights to anybody other than the FCC! Think about it!

Think also that the FCC hasn't been funded to handle every single RFI complaint in the USA. The FCC has a lot of OTHER radio services and interstate carriers to regulate, services that affect ALL the citizens, not just amateur radio hobbyists. Federal budget figures are public information and you can find out how little they get by checking The World Almanac (annual editions less than $10 yearly at newstands).

Remember that some folks will be FOR S2025 while you and others are against it. If an elected official gets more response FOR and less AGAINST, he will vote for the FOR group. The group with the most communication gets the attention.

There you go again Carl, asserting opinion as fact: "All the technophiles amongst us are saying...". This is obviously false statement and weakens your credibility. There are many, many "technophiles" in the ham ranks that love cw. If you worked a little cw once in a while, you'd be able to confirm this for yourself.

2695. The final solution

WHAT IS C W

* It is a unique,intimate,concise and effective communications skill still employed throughout the world.

* It is the most efficient mode in terms of power required for long-distance communication ,least susecptible to interference,and conserving of the radio frequency spectrum.

* It involves no accent or pronunciation problems,therefore providing a widely understood international language.

* It employs simpler,more reliable and easily maintained equipment than any other communications mode.

* It is an equalizer,negating age,speech impediments and dialectical differences;it provides for ready acceptance of youngsters in an adult enviornment.

* It is the ONLY radio communications mode that is understood readily by both man and machine.

Please note : the above article was submitted for packet by N1CNS as a reminder that it is a serious and viable means of communication. Any responses may be sent to me WA1HVD @ KA1AZ.RI.USA

For once, Michael is correct. About 15% of current higher class licensees started out as code test free Techs while about 18% of current amateurs have remained code test free Techs. So about 45% of Techs are upgrading.

Now since it is obvious that 82% of amateurs are *not* on HF, though they are licensed to be there, many of those upgrading must be doing so for other reasons than gaining access to HF.

If I recall correctly, the Tecnician class license showed a dramatic
increase after the code requirement was removed. I believe that if all
the folks who were part of the increase were not licensed, the number of
responses would have been reduced correspondingly.

>>I feel comfortable estimating that a significant number of the response >>came from

Even if the ratio of codeless techs to other users were LESS than what
one would expect from a head count, the number would still have been
"significant."

(As a matter of fact, Carl, I do believe that. The LEO system is
frequency adaptive, checking channels for occupancy, etc., before use.
The satellite stations probably would be compatible with most 2-meter
phone work. The real problem comes from the ground stations associated
with all this; they could interfere with 1-watt HTs that the satellite
really can't hear. Our Senior Lab Engineer, Zack Lau, did a rather
detailed analysis of the situation; we really have looked at it
carefully.)

>will be more seriously pressed.

Actually, I suspect that the parameters for a world-class moonbounce station will raise a few eyebrows. :-) I wouldn't discount the value of a technical analysis of the sharing potential. Coupled with the demographics, showing the extent of current occupancy, it forms a pretty persuasive argument that they need to look elsewhere. Remember, the amateur frequencies are only one of a large group of bands they are looking at. While the LEO folks may not be dissuaded, those making frequency-allocation decisions will consider the technical aspects of sharing. One thing we can usually say about our regulators; they are not apt to make decisions that will ultimately result in more work for themselves. Deciding to permit a technically unworkable sharing situation would NOT lessen their workload.

>beyond the stagnant "novelty" use hams have made of them.

Hams will probably not *directly* produce major new technological advances, but this is not due to anything inherent in the service; it is primarily because modern technical R&D usually requires more capability than the typical ham station. However, don't discount AR yet; hams have long been noted for taking expensive technology and finding ways to make it cheap. (We first did this with spark, I believe, making low-power spart transmitters from old Model-T coils.) And, many of the engineers who *are* working on state-of-the-art technology are engineers first and hams second. In many cases (mine in particular), their career in electronics grew from their ham radio experiences. I suspect that the engineers who are also active hams have learned from their experiences with Amateur Radio.

>Some of them are actually VERY dangerous and detrimental to the future
>of ham radio ... the worst being "We think of radio as a hobby." This
>has been carried so far that there's no sense of responsibility to the
>real reasons for the existence of the Amateur Radio Service ... public
>service and experimentation with and development of technology.

I presume you are not speaking for the hams that are actually doing these things. While (sadly) they are not 100% of hams, the folks who are active in public service and experimentation are quite significant, indeed.

>So sad ... ham radio is so desparately in need of a vision of BETTER
>ways, but it insists on clinging to OLD ways ...

Over the past 10 years, I have seen significant evolution of the ways hams communicate. Modes like packet, once a "novelty" are now mainstream Amateur Radio, to cite but one example. Perhaps you and I are exposed to different parts of Amateur Radio, but although we are not abandoning the "old" ways, that is not precluding us (as a service) from making good and proper use of new ways.

Why should CW get such special treatment? You don't have
"interference-free" zones *now*. Just because those who like OOK Morse are
placated into accepting those on HF without code tests under their belts?

>And IMHO that does not include sharing space with the current digital
>modes like PACTOR, SITOR, RTTY, etc.

Why not? Can't you just use a narrower filter and tune out all that
"noise"?

Why should one mode get "protection" it isn't afforded now?

In article <50vr00$iv5@abyss.West.Sun.COM> myers@West.Sun.COM (Dana Myers) writes:
>While you're certainly correct about the near/far issue, keep
>in mind the LEOs are apparently looking a huge part of the VHF and
>UHF public service bands. If they don't think they can cope
>with local NBFM users, then *all* of these bands are in danger.
>I don't think this is the case.

The politics won't let those other bands be in danger, IE their
constituencies are powerful enough to defend their spectrum.
Thus public safety services are in no danger because of their
political clout. And most of the commercial users have both
money and political connections to defend their allocations.
Amateur radio only has grassroots numbers on its side. In
other words, most of the other sharing ideas are simply
strawmen, intended to be easily knocked down so that it will
appear to the committee that the only alternative is the spectrum
of the (perceived to be) politically weak amateur service.

There are some places the little LEOs can have a reasonable
expectation of being able to operate. In the 138 MHz spectrum,
the little LEOs would share with other satellites, so the near
far problem is drastically reduced, and coordination of sharing
is a greatly eased problem (there are no terrestrial emitters using
this spectrum). In the 149 MHz spectrum, they already have an
allocation which they are using. In the 403 MHz spectrum,
they are proposing simply buying off the (few) existing fixed
service users and taking over that spectrum. Then there's the
whole issue of the soon to be vacated VHF TV spectrum. When those
66 MHz go up for grabs, it's a whole new ballgame.

In selected portions of the land mobile spectrum, and the 216-219 MHz
waterway spectrum, they are depending on the coordination database to
allow them to "play in the cracks" along the satellite track. They can
do that because all the current users are licensed to particular sites
and frequencies with coordinated guard bands which are all known in
advance. (It's a difficult management problem, but probably not
insoluable.)

Note, if they use SS, and the present little LEOs don't, the
only type that would work is FH due to the near far problem of
satellite versus terrestrial emitters. FH can let them dynamically
"play in the cracks". It's not necessary to use SS to do this,
however. They can "play in the cracks", IE the coordinated guard

bands between chanels, with conventional frequency agile narrowband techniques. And that would be better since they could realistically use tracking preselector filtering.

With amateur radio, there are (crudely) coordinated repeaters, which is somewhat like the land mobile case, though much less rigidly constrained (the bandplan isn't even consistent nationwide), but there is also simplex operation which is completely uncoordinated as to location, frequency, power, and antenna pattern. Amateurs are not constrained to a single channel (or small number of channels) licensed to known locations. Nor are amateurs constrained to a single modulation type. This makes for a chaotic RF environment. The little LEOs can't "play in the cracks" here. The chance of serious interference which would cause a service outage is too high.

Note, in all cases it is the interference potential *to* the little LEO operation which is the one that matters (there aren't enough terrestrial weak signal operations to matter politically). The level of interference they would present to ordinary terrestrial services is minimal, but the interference potential of ordinary terrestrial emitters to *them* is not minimal. Thus they need a sharing "partner" who they can easily *bully out of their way*. They aren't going to be able to do that to public safety, or to large commercial users, but they may think that they can do that to amateurs after they get their foot in the door.

A PS for those who wonder about the near far issue. If this were a terrestrial service wishing to share with amateurs, SS would allow them to do so with relatively little impact to either party. But because there is a satellite link involved, the 20-30 db of process gain offered by SS simply can't overcome the 80+ db difference in signal strength between a nearby terrestrial emitter and the distant satellite emitter. The local signal will activate the local receiver AGC and push the SS signal below the noise too far to be recovered by the available processing gain. SS offers the ability to resist jamming, but not *this* much jamming (the other emitter can be considered a jammer in this context).

Note too that the SS receiver has to have a "wide open" front end to receive the SS signal, and thus the jammer merely has to be in the passband and not directly on some particular frequency in order to cause problems. I'm sure most amateurs realize the problems with a "DC to daylight" receiver front end on VHF by now since many of the current crop of amateur HTs have them, and they aren't dealing with such a difference in signal levels (except in some of the "intermod hells" in downtown areas around the country).

The little LEOs would face a situation like that an amateur with a Kenwood faces in one of the downtown "intermod hells", but the problem wouldn't be confined just to localized areas. The problem would span entire regions due to the footprint of the satellite.

Thus they need clean uncontaminated spectrum in which to operate
if they use SS. And the only way they can get that at VHF is to
displace some other service's operations from the bandpass they
want to use.

2708. Camus mode radios -- where to get them?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-09 00:00:00 UTC
From: ljubisic@EUnet.yu
Message-ID: <511jrq$5gs@Solair3.EUnet.yu>
Source record: 217291

Hi!

I am having a little problem. I have to expand our company's radio system, and I have to purchase radios with DTMF keypad (we have also radio-phone system), but they have to be RCS 2000 - Camus mode compliant. We are using Motorola MX3000 (Stornophone7000) devices at the moment, but due to it's price and quantity we would like to buy, we are seeking for some cheaper solution. (By the way, I heard something about some new software for MX3000. Anybody has it? What are new features, if any?)

So, I was told that Alinco's DJ-130 model is Camus compatible, but local dealer couldn't confirm it. Also, I heard that DJ-182 with its Al-trunk logic board (which operates with CTCSS) could be MODIEFIED to be Camus mode compatible. Is there anybody from Alinco who could tell me if this is possible, and how?

Also, one friend told me that ICOM-H16T (#17), with Logic-A-Unit (EP701, PCB B1580H) is Camus mode compatible, and he wasn't sure, but also told me that ICOM IC-F30LT with UT-96 5 tone unit is also Camus capable. But, same thing as with Alinco, local delares couldn't confirm or deny it. Anybody knows it? Is there any e-mail contact in Icom where I could check it?

And finaly, it doesn't have to be Alinco or Icom, it could be also Yaesu, Kenwood, Standard, Harris... but I have to know is it Camus mode compatible, and how to order such option or modification from manufactorer/dealer.

If anybody knows something about it, I would like to ask him to send me a note _by mail_, since I wouldn't like to miss such importnat message by skiping it somehow in newsgroup.
Thanx for understanding!

I don't know why I didn't think of it before, but instead of the crystal and two capacitors, my PIC-based keyer could use a single ceramic resonator. Now though, I may have to add a part...

Could someone tell me if there's a "standard" specification for the voltage across an open Morse key/paddle, or how much current the contacts are expected to handle?

Specifically, I need to know if 5 Volts open-circuit is typically enough, and whether sinking 25 mA closed-circuit is sufficient. If not, I'd have to add a FET to my dinky keyer. Oh well, I was thinking I should add a cap across the PIC's power pins anyway.

If you fly your helicopter to the top of the mountain and crash, you may wish that you knew how to climb mountains.

HF is world wide communication. I believe that CW was made a requirement for its use in emergencies, not because it prevented interference or limited the number of hams. I believe it still has a valid use in emergency situations.

If my equipment is still operational in an emergency, CW will not be my mode of first choice. However, if the disaster crushes my equipment I hope there are HF operators that can copy my CW transmissions, because I may be able to build a CW transmitter from the rubble, but I would not try to build a computer, tnc and radio from the rubble.

Well, if you're keying an old-time tube transmitter, you could have
+150V or more on the key during key-up (cathode keying). If it's a
grid-block-keyed system, it might be -150V (if memory serves, the
once-popular Heath HW-101/SB-102 had this kind of voltages). You can't
just put a zener across the keyer to clamp this, either, since that will
effectively turn the rig on all the time.

Hi!

Can someone tell me what open-circuit voltage and closed-circuit current the device attatched to the "key" input of a rig is supposed to be able to handle? If 5 Volts and 25 mA is sufficient, I'll be a happy camper!

Otherwise, I'll have to use a FET I guess.

Hi, y'all --

You'd think after twenty-five years in the airplane radio kit business I'd be the one to ANSWER this question instead of ask it. The question is very simple -- What percentage of active hams are active pilots, and what percentage of active pilots are active hams?

At one time we did a VERY limited sampling, random names chosen from each group, and came up with about a 25% cross-breeding, going in both directions. That was why we started the company, away back in 1972 -- we figured that a quarter of the airplane drivers had some sort of technical skill and it has proven out over the last 25 or so years. That was back in the days of kerosene powered computers and ram measured in BYTES instead of megabytes. (You don't really think we chose the initials RST at random, do you?)

Anyway, we're thinking about developing a product that uses the privileges of amateur radio but for aircraft use (and yes, we'll require a call sign and crosschecking to sell it). We're sort of guessing that the market has stayed about the same, but with the explosion of the Tech ranks, we think the numbers might have skewed upwards.

Anybody got a good way of doing an SEWAG (instead of my rectorandom estimate) without the pain in the fanny of picking a thousand names at random and seeing how they cross-check into the other list? How about one step further, how many hams are airplane OWNERS?

There are a number of issues in this action which are a problem.

1) The R&O was issued without anyone having seen the proposed
rules and thus unable to comment in a substantive way.
2) The 50W power threshhold for amateurs is arbitrary and
likely to trigger concerns on the part of State and local
land-use regulatory agencies that power above 50W is somehow
"bad" and cause for restriction on their part.
3) The 50W power level is unreasonably low, and differentiates
between Amateur Radio licensees and other radio-service
licensees which are treated much less restrictively.

This is demonstrably false on all counts.

Sanity check: if CW is so power-efficient, why doesn't NASA use it in
deep-space probes? If it's least susceptible to interference, why
doesn't the military use it in jamming environments? And if it's so
conserving of radio spectrum, why don't the commercial carriers
use it, given the billions they spend on spectrum auctions?

>
> * It involves no accent or pronunciation problems,therefore providing a

Morse is a character set, just like ASCII. Are you saying that two
people who have no natural language in common can carry on a full
conversation by just switching to Morse code? Standardized overhead
(signal reports, etc) do not count as "full conversation".

To the extent that Morse overcomes accent or pronunciation problems,
the same can be said for email and similiar forms of modern digital
communications. Of course, you still need to have a natural language
in common, at least until automatic machine translation arrives.

>

Assuming, of course, those youngsters know the code -- which few do.
If you wanted to give more than lip service to bringing kids into
ham radio, you'd admit that many more kids can type and read than
send and receive Morse. Not only that, but typing and reading are
clearly going to be more important in the world they're going to
inherit than Morse will be.

>
> * It is the ONLY radio communications mode that is understood readily by
> both man and machine.

What does "understood" mean? Can a machine truly "understand" a Morse
conversation that goes beyond standardized overhead? Isn't the
ultimate purpose of most communication systems human-to-human
conversation? And can a human understand Morse-modulated RF directly,
i.e., without a receiver? Your statement is at best meaningless;
at worst plain wrong.

>GLOWBUGS lists (Glowbugs is devoted to homebrewing tube gear).

I'm not so sure of that. Between Hamtronics, Ramsey, Tentec, the late unlamented VHF Engineering, Down East Microwave, etc, and conversion of commercial surplus, I'd suggest that FM is the most popular for those who build or modify. And a good deal of that gets pressed into digital service. Note that this isn't scratch construction for the most part, but rather depends on kits or commercial surplus assemblies for the parts and basic design. However, a look at _Microwave Update_ or one of the Proceedings issues shows considerable at home scratch construction of this sort of equipment too. (And most of the kits aren't of Heathkit quality so they require considerable skills by the builder beyond simply following instructions and knowing how to solder in order to get them operational. Thus I'd tend to lump them under the banner of homebrew.)

I know the sales figures for the GRAPES 29 MHz quadrature transceiver kit (several thousand units), and I have a fair guess for some of the others. Discounting commercial surplus conversion for the moment, I'd suggest we're looking at something on the order of 30,000 to 70,000 non-CW units which have been shipped. Add in conversion of commercial surplus and you're looking at well over 200,000 units (conversion sometimes only requires changing the crystal and repeaking, which shouldn't qualify here, but often it requires fairly extensive changes which IMHO could fall into the category we're discussing). Note for the most part we're talking about both transmitters and receivers here, not just transmitters, IE complete working stations.

If we also include the CB->10m conversions (including conversion of AM rigs to FM), we're looking at several thousand more non-CW home projects. And we have ringers like Campbell's T2 and R2. They're quadrature units. They can be used for CW, but they also work fine for SSB or digital (which is how I'm using mine). I have no idea how many kits Kanga has sold, or how many were built directly from the QST articles. I built mine from the articles, and modified them extensively in the process by replacing the analog audio phasing section with a DSP. I use them for QPSK experiments, but they would have worked for that without the DSP (just not as well). I know several others doing similar things with them, and some folks using them as SSB exciters (followed by a homebrew amp) and receivers.

Most ATV transmitters (and receiving converters) have been homebuilt. They've either been kits or scratch built for high level modulated VSB, and for FM they have been mostly kits with only a few scratch built (pity, the FM units are easier to scratch build than the VSB units, and offer better performance). Of course the total isn't huge in any case since ATV isn't a hugely popular amateur mode.

I'm leaving out what was historically the biggest kit supplier, Heathkit, because I don't think of them in the same way as the others. They are truly just home assembly rather than what we'd consider homebrew because of the extensive instructions and the care with which the units were designed to make them foolproof to assemble by someone with virtually no skills beyond reading and following directions. If they were included, you'd have a large number of respectable SSB transceivers and FM transceivers to add to the total. (I believe the HW-101 was the largest selling amateur kit of all time.)

>Jeff KH2PZ / KH6 (ex WA6QIJ) (exclusively using homebuild CW transmitters)

But the transmitter is only half of the station, and usually the simpler half at that. What about homebuilt receivers? I'd say by far the most popular receiver to build is a simple FM monitoring receiver. It is only one chip today, and can be assembled in an evening, yet it offers remarkably good performance (and you can build a matching one chip FM transmitter to go with it). Even a simple DC CW receiver is usually considerably more time consuming to build, and performance can be poor because of oscillator stability problems, no single signal filtering, and the hum pickup problem. The DC receiver works as well (or as poorly) for SSB or RTTY as it does for CW too (much the same can be said of superhets, depending on the filter chosen).

I don't have much info on sales figures of QRP CW kits, though I suspect most of them sell in the hundreds, not the thousands, and I'm fairly confident the total is below that for the FM units mentioned. Quadrature and SSB kit sales (other than Heathkit) probably lag the CW kits because they are a bit more complex and specialized (but not very much, most of the complexity is in the receivers, and for good performance the CW receiver can't be much simpler than the others).

I've only addressed radios, but if we look at other parts of the station suitable for home construction, we see a lot of activity. TAPR says their TNC kit sales exceeded 20,000, and GLB sold a bunch of their kits too. If we were to include Baycom or Hamcom style modems, the numbers would be huge, but I'll ignore them as too simple to fit this category.

And of course there are amplifiers, antenna tuners, and antennas. They aren't respectors of mode, but many many amateurs build them. Now neither of the latter are rocket science, but it does take a wee bit of skill to get all but the simplest working right. Linear amplifiers are one of the most popular home contruction projects, and one of the most common homebrewed items seen for sale at hamfests. They can be challenging to do properly.

I think you see CW transmitters as the most common because that's all you do, so your vision is a bit myopic on the subject of home constructed equipment (or you may be insisting on a purist definition of homebrew which doesn't admit anything but an original design by the home constructor). If you were active on other modes, you might find that there is quite a bit of building going on for them as well. Probably only at microwave, and for ATV, is homebrew the majority course, but it is alive and well on most of the other modes, not just among CW operators.

For beginners, I think FM offers the best point of entry. The systems are simple (considering both transmitter and receiver), stability is less of a concern, performance can be quite good thanks to the common availability of high integration parts, and the only encoding you need to understand to use them is ordinary speech. There's also the factor that RF gets easier to do as you go up in frequency to where you can use simple striplines printed on circuit board, IE the "no tune" designs, and where you can use unconditionally stable MMIC amplifiers, and where high gain antennas are small and practical to build and install.

Walter,
Lead won't work. Too soft. Try a piece of #10 copper wire. Works for us. We
don't have hardware stores...

Actually, several of the groups are a world-wide forum (but we agree that wa.general is probably not us!). Unfortunately there is no Washington (WA) State specific online forum. And worse the stupid newreader I'm using doesn't appear to allow me to delete wa.general from this reply. Sorry about that.

At least its posting on the global rec.radio.amateur.misc has been of value because I live in WA state also and would not otherwise have known about this issue. Now, let's not spend lots of time arguing amongst ourselves - that rarely accomplishes anything - I've already written to the State Patrol and my elected representatives on this. I'm also posting comments on our internal company ham radio group forum where perhaps 200 more hams in WA (the U.S. one) will hear about this poorly worded proposal.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
6,000 FILES IN 119 FILE AREA'S..so far !

latest list of AMATEUR RADIO WEB SITES & PAGES
now 2,405 websites & pages !!!!!!!!!
and GROWING FAST ?!?!!

P.S. also available on the web at:

http://www.padl.ac.at/schule/chemie/bob.htm
look for web-sites by KB6AXK on the page........

FYI:there are roughly ,over 33,000 pages,just pages,
that relate to amateur radio/ham radio on the web ???????
My list is primarlly websites.............

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.
INTERNET E-MAIL ADDRESS:> kb6axk@ix.netcom.com

>engineers who are also active hams have learned from their experiences
>with Amateur Radio.

Correct me if I'm wrong, but I think the last significant novel
hardware concept originated by a ham was the parametric amplifier
invented by the late Sam Harris. And the last major amateur
contribution to device physics was probably sometime back in
the 1920s or earlier. (I mean here that the contribution was
done by an amateur as an amateur, and not by a professional
working as a professional who happened to also be an amateur.)
Despite the proliferation of device numbers, there are really
very few novel devices used in electronics, so it isn't too
surprising that amateurs haven't invented most of them.

Amateurs didn't invent the transistor or the IC, but amateurs
have found clever and economical ways to employ them for radio
use over the years, even those devices whose professional designers
never even considered them as suitable for RF. But even here, a really
new circuit topology is rare, among amateurs and professionals alike.
Most of this ground has been plowed, or would be obvious to someone

skilled in the art if they thought of using those particular devices
for that particular purpose.

Most ideas seem obvious once someone has thought of them, however,
so this is a tricky area. Amateurs can bring a different perspective
to design than a professional must use. That often leads to trying
the unthinkable, such as using a LED as a microwave detector diode.
The professional might never even consider that, but hams tried it,
and it works (after a fashion). It might not fit some optimum, but
if it gets a particular job done, and is cheap, it meets a needed
goal.

I think most of the advances by amateurs in recent years have not
been in the realm of hardware, however. I believe most of the novel
developments have been in terms of protocols, software, and firmware
used to drive fairly conventional hardware. Striking examples of
this are Karn and Beezley's separate efforts to adapt an ordinary
sound card equipped PC for DSP use on weak radio signals.

>>Some of them are actually VERY dangerous and detrimental to the future

>I presume you are not speaking for the hams that are actually doing these
>things. While (sadly) they are not 100% of hams, the folks who are
>active in public service and experimentation are quite significant,
>indeed.

Yes indeed, but the number with the "just a hobby" attitude is depressingly
large. That's expressed in many ways, but I was struck in particular by a
statement made here recently in response to a query asking if the amateur
were a student. He answered, "I don't have to be a student, I already have
my Extra." Isn't that sad?

If we are to fullfill the service's charter, we must all be lifelong
students in this learning laboratory called amateur radio. The sort of
attitude expressed by the amateur quoted above is one of the reasons
I find that hellspawn of the ARRL, "Incentive" Licensing, such a bad idea.
It implies to too many that learning can stop when the highest class is
reached. It would be better if there were no finite cap on what an amateur
is expected to learn. By that I mean it would be better if there were one
clearly labeled entrance exam, sufficient to determine the person was
capable of working in the amateur radio laboratory environment without
causing undue harm, and not something which could be mistaken for a
graduation certificate. The only form the later should be allowed to
take would be the form issued by the coroner.

>>So sad ... ham radio is so desparately in need of a vision of BETTER
>>ways, but it insists on clinging to OLD ways ...
>

>Over the past 10 years, I have seen significant evolution of the ways

>Amateur Radio, to cite but one example. Perhaps you and I are exposed to
>different parts of Amateur Radio, but although we are not abandoning the
>"old" ways, that is not precluding us (as a service) from making good and
>proper use of new ways.

We have made significant strides, but we are being held back in a number
of ways by some of those clinging to old ways. Because the service is
"just a hobby" to them, and their hobby interest is preserving old ways,
they have too often raised objections and obstacles in the way of those
trying to advance the art and bring the service more actively into modern
technical relevance. We see that in resistance to calls to modernize
the licensing exams, in resistance to permitting new modes on the bands,
IE relaxing the SS rules and loosening the straitjacket on HF digital,
as well as in resistance to modernizing their own skills.

The ARRL has been on both sides of this issue, but more often on
the side of fighting against modernization rather than pushing
aggressively for modernization. That's understandable considering
the ARRL's makeup and "old guard" constituency, but it doesn't make
it any less depressing. It would be refreshing if the self-proclaimed
leader of amateur radio would show a bit more vision and leadership.
It would be refreshing if the ARRL were less concerned with radio
museums and more interested in the 21st century. (As indicator of
that latter charge, look at the resources allocated to establish
Newington's museum versus those allocated to the recently disbanded
Digital Committee.)

A service that is still seriously debating Morse Code requirements
can't be taken seriously as a service relevant to today and tommorrow.
At best it can be viewed as a service whose eyes are fixed firmly to
the rear in an attempt to preserve history in a living museum. It can
better be viewed as a service bent on self-destruction by trying to
maintain the "old boy's club" initiation rites at the cost of the
future of the service.

Note, there is nothing wrong with museums. They can be useful to
illustrate where we've been and how far we've come. But being
required to become an *exhibit* in a museum in order to practice
amateur radio is a different thing altogether.

It's called politics, Jerry. Good politics is the art of finding a compromise (grudgingly) acceptable to all sides.

>>And IMHO that does not include sharing space with the current digital
>>modes like PACTOR, SITOR, RTTY, etc.
>
>Why not? Can't you just use a narrower filter and tune out all that
>"noise"?

Don't be mean, Jerry. Jim isn't one of the wooden heads who still claim "CW gets through when nothing else can". He knows better than that.

>Why should one mode get "protection" it isn't afforded now?

Because it *needs* it. As machine digital grows, as it is, and as it will to a much larger extent if the changes we want are enacted, it is going to become increasingly hard for Morse users to compete. Just as we set up "Dx Windows" to allow distant stations a chance to function without being drowned by the high power locals grousing to each other about their lumbago, we need to setup a "CW Window" where those who still want to use CW can do so. Banning the use of CW would be wrong, and that's what we would be doing defacto if we don't set aside a place for it to be used in relative peace and quiet.

>
>John K7SII

Lets *get real* here, John. Just how often has CW been used in situations like that in recent years? Despite repeated calls for references to such uses, none have been brought forth. The "if it saves one life" philosophy isn't a valid one if the cost of doing so outweighs the benefit. And that cost doesn't have to be an overwhelming burden on another to be too high. It can also be too high if the aggregate cost to many people sums to too high a price to be paid.

We make tradeoffs like that every day. We could save far more than one life by setting our highway speed limits to 5 MPH. We don't do it, however, because the aggregate cost to all of us in terms of transportation delays would be intolerable. In fact we have just gone the other way and raised the speed limits even though we know it will cost lives. The burden on the rest of us was judged too high a price to be paid to save those lives.

Or on a more abstract level, we could save at least one life if we required every citizen to learn CPR before they could vote. But that would be an intolerable cost to our democracy because it would place an irrelevent infringment on our fundamental right to voice our preferences in the functioning of our government.

If continuation of Morse speed testing is damaging to the future of the amateur service, as I am utterly convinced that it is, then we must weigh that cost against the possibility that universal Morse knowledge might "save one life". Judging by the speed limit issue, it'd have to save a hell of a lot more than one life to be justified. And there's no evidence that is the case. In fact the opposite argument can be made that denying those without Morse knowledge access to superior long distance radio communications techniques could cost lives. And we do have evidence for more modern methods being used for life safety purposes in recent years.

That depends entirely on the rig. Some can be keyed with TTL levels
and currents, others have open circuit voltages of -150 volts or more,
or key down currents of an ampere or greater. One size does not fit
all. Most modern Japanese radios will work with TTL levels, but consult
the documentation of the particular radio before trying that.

Allan,

I also have a 1988 PK-232 which I first upgraded to an MBX in 1991 and this year I bought the latest upgrade which includes PACTOR and GPS functions.

It should cost you about $ US 75+tax.

Hope this helps,

Gilbert VE6GES.

What was probably THE major DXpedition of the decade, 3Y0PI (Peter I Island)
had their digital equipment smashed in transit to "the most inaccesible
place in the world". (See page 82 of the 3Y0PI book.)

They carried on with 60,000 QSOs on CW and SSB. By the time they got the
digital mode equipment going, they were only able to make about 1200 QSO's.

Hi,

We are doing a lunar rover demonstration project for NASA where we are trying
to demonstrate some robotic technologies needed for long distane/long
duration lunar missions. For this project we need to point an antenna
from a "moving" robot towards an antenna on a control tower located
about 10 miles away (line-of-sight). We need to close the feedback loop
to make sure we are pointing in the right direction. The radio which
we are planning to use (probably Airlink E1 radio from cylink) doesn't
give us receive signal strength and we need other ways to find out the
pointing error. Vision based techniques do not seem appropriate for
such long range. Radio beacons are extensively used for airplanes etc.
and seem appropriate. Any information on radio beacons or suggestions
on other ways to close the feedback loop would be greatly appreciated.

Thanks a lot

Deepak

>
>Please clarify this and set me straight on what you mean.

Ok. Out of the total US amateur population, 33% entered by the
code test free Tech route, IE after 1991. This is the large
growth spurt fostered by the new license class. Now 45% of
that group, or 15% of total licensees, have upgraded to a
higher class license. 55% of that group, or 18% of current
licensees, remain as Techs. Finally, if 18% of current amateurs
are code free, then 82% must be coded, and thus have access
to HF. But because the HF bands are obviously not that crowded,
they aren't all exercising that privilege for whatever reason.

Hello Jim,

I read an article that you wrote back in '09. Actually it was
probably around 1976??? I honestly don't remember which magazine it
was in. I read all of the flying type magazines that I can get my
hands on.

What you said was something to the effect that you had develped an
audio-panel kit and you had some insight into the type of person who
would build a kit to put into their airplane. You went on to explain

that in your experience, a large percentage of pilots share at least 2 of 3 common interests. Airplanes, electronics, and photography. Some would have only 2 of the three, but when two people met who shared a common interest, invariably they would share one of the other two.

So, now, I must confess a grevious transgression. There have been numerous times since then that I have been confronted with the statement/question, "YOU FLY AIRPLANES!?" And, now, you must picture this as being in on of the following situations:

1. I'm a boy from Tennessee at the Sleepy Hollow Country Club outside of New York City.
2. I'm at the bosses Christmas party talking to his wife.
3. Standing at the water cooler on a new job with people that I've never worked with before.
4. Chewing the rag on ham radio.
5. Making discussion after dinner with a new girlfriend.

In each of the following, I've presented myself as being so profound as to have observed the common interest between flying, electronics, and photography. It always works. Well, sort of. For example:

1. The photographer was gay. In this enlightened age, that's OK, but remember, I'm a boy from Tennessee.
2. The boss's wife didn't know anything about any of the three.
3. Works every time. I'm an engineer by trade.
4. Ditto. There is no more perfect example of your theory!
5. We're married. Her brother is a full time professional pilot.

> a couple of RJ-11s (for phone) and a couple of RJ-45s for 10/100base-T
> ethernet.

The company I work for is about to move into another building, and we
are putting 24 shielded RJ-45s in _each_ room, usuable for 10/100base-T,
ATM, CDDI, ISDN, phone, fax, modem, serial connections, CCTV,...
The whole building will finally contain 10 miles of cat-5 with a huge
patch panel in the server room. I'll be able to connect any line
to any socket within a few minutes, including the documentation
update.
Initial costs are a bit higher, but we won't have to rewire anything
for _several_ years.

Have the electrician run separate mains to each room, with separate
fuses for each room. Make sure all connections and fuses are
labelled correctly! I already had some _scary_ experiences with
incorrectly labelled fuses.

Just my $.02,
Jens, DB9LL

2755. BARC- UGA Radio Club needs Advice

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-10 00:00:00 UTC
From: jbarnes@netcom.com
Message-ID: <jbarnesDxJGCv.EDM@netcom.com>
Source record: 217137

Hello,

I am an officer in a recently revived radio club at the University of Georgia that I posted about earlier. I need some advice/suggestions from fellow hams.

Our school provides us with no monetary support at all. I would like suggestions from people reading this newsgroup on places that are willing to help student ham radio groups such as this one. We are not necessarily looking for money. I would like some names of places that may be willing to give us some used equipment as well. This equipment may include antennas, radios, repeaters, whatever we can get.

As of right now the club has a low power 2 meter repeater that is basically made of two radios and a homemade controller and as I said before we are operating on a practically non-existant budget since we receive no help from our school.

Any help/ideas from fellow hams will be appreciated.

Please direct all comments to my email at jbarnes@netcom.com because I can not be sure that I will see if it you post your reply here.

Thanks,

Joe Barnes, KE4SWE

Howdy Curtis
Hmmm -- Ham Radio Newsline interpreted the attached as encompassing a TV
Yagi style antenna.

Judge for your self -- see 1.4000 Part a, sub 3, it sez

"(3) an antenna that is designed to receive television broadcast
signals,"

So as not to be out of context, later I'll include the pertinent quote.
I suppose the lawyers will have a ball with this one.

FYI: Create sells a LPDA covering 50-1300 MHz, boom is 5'9" longest
element is 9'10". Radio Shacks TV fringe biggie has a 190" boom. Hmmmm.

Anyway thanks for dropping in
73
Rod
CC&Red in San Diego

From fcc96328.txt
1.4000. Restrictions impairing reception of Television Broadcast

Signals, Direct Broadcast
Satellite Services or Multichannel Multipoint Distribution Services

(a) Any restriction, including but not limited to any state or local law or regulation, including zoning, land-use, or building regulation, or any private covenant, homeowners' association rule or similar restriction on property within the exclusive use or control of the antenna user where the user has a direct or indirect ownership interest in the property, that impairs the installation, maintenance, or use
of:

(1) an antenna that is designed to receive direct broadcast satellite service, including direct-to-home satellite services, that is one meter or less in diameter or is located in Alaska; or

(2) an antenna that is designed to receive video programming services via multipoint distribution services, including multichannel multipoint distribution services, instructional television fixed services, and local multipoint distribution services, and that is one meter or less in diameter or diagonal measurement; or

(3) an antenna that is designed to receive television broadcast signals,

is prohibited, to the extent it so impairs, subject to paragraph (b).
blah blah"

Our ARRL lawyer sez (3) leaves the door open for a TV Yagi antenna ala the RS Biggie or the Create CLP5130-1. Hmmmm

scott rider <scott_rider@ccm.hf.intel.com> shared these priceless pearls of wisdom:

->Jim,
->One data point for you
->Scott Rider CSEL/CFI N-6296L Grumman N-???? BD-5 in garage
-> KC7IQR General
->More of a pilot than a ham. scott_rider@ccm.hf.intel.com

And Scott, I appreciate that. I got a half a hundred nice letters from folks that enjoyed both hobby/professions, but I think my question was a little more general, in that I wanted to know, given two HUGE databases, probably not in the same format, was there a way of randomly selecting a few thousand in one database and seeing if there was a corresponding entry in the other database. Not necessarily for marketing per se to those specific individuals, but more like marketing statistical research on the population as a whole from a small sampling.

But nice to meet you and thanks for the response.

->> RD

->Nice attitude. From the trone of his letter and the fact that he is
->using
->an EDU account, I suspect that he is probably a student and likely NOT
->getting paid.

Well, yes, but...(1) He spammed every newsgroup remotely interested, not
only the amateur groups at the beginning of this letter, but most of the
sci.electronic and a few of the others. (2) To be told that he doesn't
have the time to come back to all the groups he spammed and he wants
personal email when a lot of the rest of us might like to see the responses
is just plain selfish.

Sorry, I don't agree with the _tone_ of the first response, but the message
was probably pretty close to accurate.

WE8W,

Amateur radio is a hobby which we elect to do for enjoyment. Learning CW and the technical aspects are difficult. Those who learn the code and pass the written tests are rewarding for their efforts in a personal sense of accomplishment and more access to the amatuer spectrum. It is a good system and we should keep it. I have found that those things that I must labor for, I value more. I think that many others hold simular feelings. Since this is only a hobby, those that find the code difficult, should consider another hobby which will provide them satisfaction.

THE WESTERN CONNECTICUT HAMFEST
Sponsored by the Candlewood Amateur Radio Association

Just 14 miles from the NY/CT State line!

Sunday, Sept. 15, 1996 0900-1400
Edmond Town Hall Route 6, Newtown, CT
Tables inside Tailgating outside
ARRL Sanctioned Handicapped Access
Door Prizes Ample Parking
Gourmet Fare Rain or shine

Talk-in 147.12/.72 PL 141.3

General admission $4.00 at the door (what a deal!)

Tailgating $6.00, inside table reservations $10.00 each, (both
include 1 admission), mail to:
Candlewood Amateur Radio Association, PO BOX 3441, Danbury CT 06813

For more info, phone (203) 790 7041 or (203) 438 6782.

Hope to see you all there.

> Anybody have any suggestions as to a good program and or teaching tape
> or book for it??

Jeff, Get Gordon West's tape course; advertised every month in QST and CQ, maybe 73. His tapes are better than the ARRL. Since you have a computer, would also suggest either Code Master V or Morse Academy. However, these sort of assume you want to copy the material to the keyboard. CM V will also just sent stuff, and you can copy with pen/ pencil. Either tapes or these computer programs are probably better than copying ham QSO's on the bands. W1AW code practice transmissions may be of use to you.

Read my bit in the September CQ, in the Contest Column for several other ideas on learning to be a good CW operator. It is a lot of fun, and most guys/gals who learn it well come to really enjoy CW QSOing, DX'n and Contesting. Just listen to 20 meters during the daytime these days, first to SSB stuff then to the CW subbands. You will hear a remarkable difference in the intelligibility, readability of the two modes with QRN, etc under these poor prop conditions. You don't have to be able to read the CW signals to easily hear that there are more QSO's going on, and they are easy to hear; not so true in the SSB part of the band. At least those are the band conditions as heard out here in the Pacific these days.

73 and Good Luck on your CW practicing.

Lighten up Jim, he sent the message to *three* newsgroups that would
normally be involved with his question. I hardly call that
"spamming".

My personal experience with students working on projects for NASA, is:
the school gets funded, but the students do not see *any* of the
money. The faculty gets all the credit when things work and the
students get all the blame when things go bad. Also the students
contribute nearly unlimited amounts of their own time and a lot of
their own money. So get off your high horse and cut this kid some
slack.

I have taken components from a junked TV set and built a VFO'd 40M CW
transmitter from them. If a set has discrete parts then those parts can
be easily identified and used to contruct an xmtr.

>It's only possible "value" is as more of the "keep CW" support mythology

CW *will* get through over SSB and RTTY on HF. But you don't have such
HF privileges so you're not expected to know that.

It'd do more than raise a few eyebrows ... it'd totally saturate their
transponder ... there might even be a possibility that it could do some
permanent damage (depending on their input protection circuits and how
robust the low-noise FETs in the first stage are)

I'm not trying to "elevate myself above others" ... you and others have challenged my technical qualifications on the basis that I'm "just a technician" (an OT, with-code, with [somewhat] less watered-down old General written test) ...

I was specifically asked about my commercial license ... and a commercial license-like test (more comprehensive technical, on the order of the current extra class written) was also suggested by someone as an alternative testing path to HF access without a code test.

Maybe instead of worrying if someone else is "trying to elevate himself" you should concern yourself more with your (and other pro-coder's) propensity for trying to degrade others and dissmiss their intelligence and technical competency on the basis of their lack of a code test certificate???

If that's true, Gary, then our 2 meter VHF band should be in no
trouble whatsoever, thanks to the poplulation of bootleggers on
that band in various parts of the world. The amateur packet
satellites are virtually useless when the footprint encompasses
certain areas, due to illegal use of the spectrum. In this part
of the world, south east Asia is a very big problem area, with
the Philippines in particular leading the charge. I have heard
that the same problem exists in certain parts of Europe.

I would hope that commercial interests realize, in the event
of a 'takeover', it will be much easier to rid the aquired band of
ham operators than it will be to rid it of slims.

>
>If my equipment is still operational in an emergency, CW will not be
>my mode of first choice.

The statement above shows good common sense.

>However, if the disaster crushes my equipment
>I hope there are HF operators that can copy my CW transmissions, because
>I may be able to build a CW transmitter from the rubble, but I would not
>try to build a computer, tnc and radio from the rubble.
>

However the above statement is in reality nothing more than a romantic
fantasy.

How do you propose to solder? Ever try replacing even ONE device on
today's surface-mount-technology PCBs without specialized desoldering
tools?

Would you even be able recognize what components did what? Most chip
Rs, Cs, and Ls do not have readable value markings on them (some of the
larger {sized} resistors, do, but most do not).

ICs are likely even greater mysteries ... what's a MC2036B do? What's
it's pinout? What are the maximum voltages you can apply to any
pin without frying it in a microsecond or two? (I doubt that you carry
a complete collection of data books from even one IC manufacturer on
board your plane. The part number I gave is a valid Motorola part
number ... they just sent me a new collection of data books at work
yesterday ... it occupied two good-sized cardboard boxes and must have
weighed close to 50 pounds.)

Most modern electronics gear is heavy on integration ... ICs that were
designed to do specific things. Even if you were able to determine
which were what and their pinouts, how do you propose to hook them up in
some useable fashion? (modern equipment is big on PCBs, VERY short on
salvagable wires)

I'm sorry, but as I said, this "I'll build an emergency CW transmitter
from the wreckage of my plane's radio after I crash on the mountain-top"
scenario is nothing more than a romantic fantasy ... it's so improbable
it deserves to be classified as impossible for all purposes and intents.

It's only possible "value" is as more of the "keep CW" support mythology
.. it's in the same class of bogus arguments as "CW gets through were
nothing else will" ...

Please don't take this analysis as a personal attack ... I DO NOT mean it that way ... I'm just trying to point out the impracticality of what you suggest and suggest that you question the practicality of it. If you do so with an open mind, I think you'll have to agree that the argument is more romantic fantasy than practical reality ...

agray,

If you were not so eager to find fault with no-code advocates, you might have realized that what I was saying was not that every technophile was saying that, but rather that "The only statement that the technophiles amongst us are making is ..."

In other words, I did not say that all technophiles were saying X, only that X is all that we are saying ... like "We're saying X, but we're not saying Y" ... get it now?

Geeze ...

Jim,

I'm sure you're right, but those same hypocrites will still insist on
forcing newcomers to pass a test that they likely couldn't ... to get
the same license ... that's the sense of amateur "fairness" that's kept
the test in place for so long.

>
>Now since it is obvious that 82% of amateurs are *not* on HF,
>though they are licensed to be there, many of those upgrading
>must be doing so for other reasons than gaining access to HF.

Gary,

I must have missed something ... I don't see how you start out with 15%
of current higher class licensees having started out as no-code techs,
and 18% remained that way, so 45% of techs are upgrading. Then you say
82% of amateurs are *not* on HF ...

Sorry, but I don't see how the numbers make sense ... maybe I'm misssing
something in the presentation????

Please clarify this and set me straight on what you mean.

What technical characteristics of 2m and 70cm make it ideal for
the LEO services? Given the relatively high sky noise of those
bands I'd have thought that microwave or above would be more
preferable.

2789. Family Radio Service (FRS) equipment?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-10 00:00:00 UTC
From: Steve Kagan <2WSK000@gc.maricopa.edu>
Message-ID: <19960910003508.aaaa000B9@babyblue.cs.yale.edu>
Source record: 217186

Not only does that new Radio Shack offering have only the seven 467 mHz channels (missing the seven 462 mHz ones), but it has no provision for PL squelch (either tone or digital), nor can it scan.

The radio may be set internally to any one of the seven channels. I think the user can do that with DIP switches, but it's a one-channel (at a time) radio. And in addition to having only a seven-channel capability (one at a time), it cannot be programmed from the front panel, has no channel switch, and has no tone pad.

In any case, might Radio Shack be planning a more featured radio? The current one is a pretty high-priced, though low-featured, Motorola-manufactured set.

Radio Shack's (license-required) GMRS radio offerings include a Motorola-made one, plus a less-expensive (but more-featured) scanning Radio-Shack-branded model. Again thoough, neither has any type of PL (tone squelch), and lacks a front-panel number pad.

So, could anyone post whether other manufacturers are going to offer Family Radio Service equipment? Those who know about that seven-channel (one-channel-at-a-time) Radio Shack/Motorola FRS product will agree that it's a mighty weak starting entry, indeed.
Steve

come on guys get with it.one of the purposes of ham
radio is to provide emergency communications now
suppose we have a national emergency with very
poor prop conditions are you guys on packet or the
other digital modes going to get the message across?
how about weak signal ssb condx i dont think so.
cw is king under these condx. call me a old fart or
one that resist changes if you want. but the trulth is
cw is a requirement for a ham license and i hope it
remains who needs another 11meter band type of
situation?by the way i failed the cw test 3 times 26
years for my novice but i now can copy 35 wpm plus
with cw. it just took a little hard work and study. and
while at it we should remove the answers to the
question pools and just have text to study to get rid
of the memory type exams,how many people do you
know today that can homebrew a ssb xcvr or even
repair their own radio's?old ham radio has been great
to me i went on to become a commercial telegraph
operator then a motorola service rep.

Who said we couldn't agree on something Carl? I'd go along with the
proposal that we be retested at least once every renewal period (or
roughly every 10 years). This would insure that we haven't lost any
of the previously acquired skills and knowledge and have also
continued to learn the basics of the evolving technology. Great idea!
Certainly would eliminate the threat of perjury and reinstate the
"sense of amateur fairness" . Perhaps I have misjudged you.

2802. Question on Ferrite Bar antennas

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-10 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5141ka$59a@geraldo.cc.utexas.edu>
Source record: 217199

Hello all-
In a typical portable radio, the ferrite bar antenna has two coils.
They are both connected to points on the circuit board near each other
and at the "front end" of the radio Rx. Why are there two coils? I want to
use a remote antenna and use only two connection wires (a connector).
What is going on here?

Thanks!

Bob Nagy

I would expect that a *membership* survey would be aimed at
mostly reaching *members*, with perhaps a small sample of
non-members to compare for differences.

Do the same with with some network cabling also. Or even better, put a
patch panel in the basement, run a pair of conduits to each room and
put junction boxes that are big enough to hold a coax out (for cable),
a couple of RJ-11s (for phone) and a couple of RJ-45s for 10/100base-T
ethernet.

I am looking for replacement tips for a Wen soldering gun. I believe
the company went out of business some time ago, but I still have a unit
that was my father's, and is probably 30 years old. It still works, but
the tip finally broke.

I know it's a long shot, but maybe some oldtimers (no offense) on this
group might be able to give me a lead

There have been a number of proposals, but sadly none have spawned much in
the way of constructive debate. The two most notable proposals were Len
Winkler's "Written Only General", and Bill Sohl's plan to incorporate the
code elements into the existing written elements. Both ideas are workable
compromises in the code debate, and are consistant with ITU rules.
Neither of them eliminates code testing, and neither calls for a complete
overhaul of the system. Both plans would be relatively simple to
implement.

Both plans have their individual merits. The WOG provides recognition to
those individuals who excel technically. A passing score on all written
elements through Extra entitles the applicant to General class privileges.
By subsequently passing the 20 WPM code element, the licensee would have
access to, among other things, the CW DX windows.

Bill Sohl's plan would put CW more on a par with the other modes of
operation. It would still be by far the most heavily tested mode, but
the pass/fail aspect would be vilified. By testing in this way, amateur
radio would basically be telling it's licensees that knowledge of Morse
code is encouraged, proficiency will help you to pass the exam but,
just as in real life, it is not essential.

>I know you guys want a no code HF license. But I don't know exactly

Your're starting to sound like a Carl Clone, Toddsky. But at least you have
someone to idolize. That's good.

>> Besides, if I recall correctly, Phil is now an attorney, and I know better
>> than to fence with those guys.......

>Get with the plan Jim, wrong Phil. I'd suggest you read up a little
>on digital communications techniques, you'll most certainly come across
>Phil's name.

Don't know what the plan is, Toddsky. Nobody will reply to the message I
posted asking about the plan. I am starting to wonder if there is one.
I have a cousin named Phil. He plays the trombone. I know who Phil is.
Does Carl ?

I have noticed for the last three or four days that everytime I reply to
a posting here, I get a response not from the original poster, but from
you, Todd. Let me ask you a question, Todd. I'll make it easy, like the ham
tests, multiple choice:

In the last three days, did

a.) ,Or do, you feel you are bored ?

b.) You forget that I told you long ago I am tired of arguing with you because
you are a PRO ?

c.) Everyone else hire you to answer all thier mail ?

d.) Someone appoint you as the new spokesman for all mode challenged
amateurs ?

e.) You appoint yourself as KH2D's own personal pain in the ass ?

A [ ]
B [ ]
C [ ]
D [ ]
E [ ]

No need for any dialog, Todd. Not an essay question. Just check a box and send in your answer.

Again, go find somebody else to argue with, Toddsky. If I wanted to discuss anything with YOU, I would respond to the posting that YOU write.......

Absence of the above mentioned responses should tell you something, but apparantly it doesn't.

Hafa Adai,
Jim KH2D

>saying as "when you lower the testing standards, you get a lower
>quality of people entering the service". I believe that there is
>a basis for that statement (maybe or maybe not specifically as related
>to ham radio, but certainly to society as a whole.)

Standards are used as references for measurements. For example,
the standard meter and the standard kilogram are references for
measurements of length and mass respectively. But the standard
meter is of no use when mass is being measured, nor is the
standard kilogram of any use when length is being measured.
In other words, to be of any value, a standard has to be
relevant to the thing being measured.

Morse code "standards" are only relevant for those desiring
to measure Morse code speed. Since Morse code speed has become
irrelevant to amateur radio licensing purposes, because the
need for the goverment to assure itself that amateurs can be
waved off when they interfere with life safety services using
Morse is gone, the "standard" has become moot.

Your blathering about upholding "standards" has about as much
semantic content as the Democrat Party's blather about "family
values" and "it takes a village" at their convention. It is
merely a smoke screen for a hidden agenda (in the case of the
Democrats it is socialized medicine and public creches subsidized
by the taxpayer). What socialist, central control, Big Brother form
does your hidden agenda take?

2812. Re: ARRL "Representation" on code and other issues

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-11 00:00:00 UTC
From: Ed Hare <ehare@arrl.org>
Message-ID: <516u20$nuq@mgate.arrl.org>
Source record: 216910

carl@ais.net wrote:

>My point is that the ARRL falsely represents to the FCC, IARU, and ITU
>that it "represents" the (entire) U.S. ham community.

Actually, no one at any level would truly assume that any organization could represent all amateurs. We have never gone to these meetings and told the participants that can explain what each and every US ham feels on any subject. We and the people in these fine organizations are well aware of what ARRL "representation" represents -- a snapshot of a significant segment of the active hams in some cases, an instantaneous response to an urgent problem at hand in others. We are smart enough to know that the people on these organizations know the number of hams, know the approximate number of ARRL Members and can subtract the two accurately. It sounds good to say that "ARRL is claiming to represent ALL hams" but if that statement is closely analyzed, it really doesn't hold water.

>This is false. Only a modest minority of U.S. hams are ARRL members
>(most non-members voice disgust for the way ARRL is run and the policies
>it continues to drive home at the FCC as their reason for not
>belonging).

I would imagine that most of the beliefs on the "way ARRL is run" are not accurate and represent the way the person expresses those beliefs presumes ARRL is run. Working here, I have found the process to be open and above board in most cases. I do welcome discussion of any specific examples to the contrary. And I must add that ARRL does enough things that I imagine you can find some specific examples to the contrary, but I offer that, overall, the process welcomes active participation of the amateur community.

Someday I will find the time to list the things that have been done by the ARRL as reported in QST/the ARRL Letter, etc, then anaylyze which of the actions were contrary to my interests in the subject and did not "represent" my views. I am sure I will find a few, btw, but that will probably not change my views on ARRL. I will have to think long and hard before I withdraw my support for ARRL over any one or even several issues because I know that withdrawing my support for any reason is also withdrawing my support for ALL reasons. In many cases, if the ARRL did not do many of the things that NEED to be done for Amateur Radio, no one would. Do you really propose that Amateur Radio would be better if ARRL did not "represent" Amateur Radio at the ITU, FCC, industry standards bodies, etc? If you have ever made use of information that ARRL has put into QST, our publications, our Internet and BBS sites, etc., you have been encompassed in a much broader definition of "representation" than

you might care to admit. :-)

>Of those that are "members", many freely admit that they do
>not feel the ARRL represents their views and that their ONLY reason for
>"membership" is to obtain a subscription to QST.

Much of the ARRL "representation" is for ARRL officers, directors, staff, Field Organization and members o be active participants in those areas that could affect Amateur Radio. This ranges through the work we do with the FCC to participation in international spectrum-management bodies to voting participation in standards organizations such as IEEE and the Society of Automotive Engineers. While I may not go to these meetings and say exactly the words you would say, most hams would be glad that there is a voice of Amateur Radio that is part of the process.

>Since the ARRL is going to continue to represent to the FCC, IARU, and
>ITU that it "represents" ALL U.S. hams, the least they can do is survey
>the majority of hams who are not "members." (Not that I have any
>delusions that they will ultimately follow the will of the majority.)

I do not believe that ARRL's position should be determined by survey. The entire concept of "representation" is predicated on the concept that decisions are made by those who are familiar with the issues. I am not very interested or knowledgeable about the current state of the art on digital radio. Do you really think I should be asked to make decisions (the indirect result of a pure survey approach to policy making) about digital radio? Is it not better that the major decisions about any issue be made by those who are competent and knowledgeable in the area?

ARRL is, IMHO, on the right track in this area. We have specific committees, comprised of "representatives" from all areas of the US, chosen for the most part, for their expertise in the subject area, ranging from committees such as the RF Safety Committee (primarily MDs and researchers as members) and RFI Task Group (yours truly as a member) to the DX Advisory Committee, comprised of "representatives" from each Division, etc.

The basic organization of ARRL is correct, too, IMH-personal-O. We have Directors chosen by direct vote from ARRL Members in a number of Divisions across the country. These Directors, BTW, are instantly accessible to Members by telephone (most publish their HOME phone numbers in QST), email, letter and in person. They usually run around their Divisions attending hamfests and club meetings and ASK for input from hams.

There are certainly ways we could do things better; we probably could use more advisory committees on a number of subjects; we should report more about the things we do to "represent" Amateur Radio. All in all, Carl, I could envision that someday the ARRL could do some one or two things that I felt to be so important that I could no longer support the organization. I suspect, however, that deep in my heart I would be glad that the ARRL was continuing to do some of the other things that

continued to benefit me in other areas.

Just some food for thought.

73 from ARRL HQ,
Ed Hare, KA1CV,
ARRL Laboratory Supervisor

(BTW, I do not believe these things because I work here; I work here because I believe these things. :-), Ed)

>5WPM is sufficient, anything faster as a requirement to band privileges
>is, as you say, a step backwards.

A small history lesson, eh? Sort of like forcing grade schoolers to do long division using Roman Numerals I suppose. At least it teaches them how horribly cumbersone were the efforts of Roman era accountants and engineers, and helps explain why the introduction of Arabic numerals and the concept of zero led to a revolution in computation. Perhaps the same is true of Morse testing. It can serve as a bad example of coding design for alphanumeric text.

One must ask, however, whether this history lesson is valuable enough to form a stand alone pass/fail basis for licensing of access to amateur spectrum. After all, we don't hold 3rd graders back from the 4th grade just because they have a bit of trouble with Roman Numerals. It is a small part of what they need to have learned in 3rd grade, and an even smaller part of what they need to know to succeed in the 4th grade.

>overwhelming majority of hams don't really want to build their own gear.

Hard to get parts? With the manufacturers practically forcing sample parts on anyone who asks, with Digikey only an 800 number away, hard to get parts? How could you ever get that idea? Perhaps some discrete parts for old fashioned analog circuits might be a bit harder to find than formerly when they were ubiquitous in consumer electronics and even the corner drug store sold vacuum tubes. Model T Ford spark coils are getting harder to find too, but certainly there is no lack of modern parts for modern designs.

It is the very complexity of modern parts which allows the homebrewer to build things he would never have dreamed of attempting in the old days. With complete subsystems on a chip, building can proceed from the block diagram level. It has become more a matter of system design than fiddling with some finicky detail of a discrete circuit. And many of the functional steps are software driven on standard hardware platforms. So as Cecil notes, programming the DSP *is* the homebrewing you do today to get radio functions the ham of yesterday couldn't achieve with racks of discrete analog parts.

Well gee, even 50 baud beats CW, so how masochistic must the users
of Morse be? :-)

Perhaps you're overlooking the fact that *radio* is part of the
process. Sure, we can fly along on commercial networks, but we
can't build or tinker with those networks (the phone police get
real pissed when we try). We can build 56 kb RF networks for short
haul use, and we can build 750 bps HF networks to span the globe.
Ok, it's not 14.4 kb, but that's because of antiquated rules,
not because we couldn't do it, or at least 9600 bps, if it were
permitted on HF.

It costs AT&T billions to span the globe, we can do it for a
few hundred dollars and a bit of our spare time. Some of the
things we learn doing it even wind up in use on commercial
networks. Karn's TCP/IP is in one of the most widely used
commerical internet modem servers, the Netblazer, but it
started out on lowly 1200 baud packet, on a $50 surplus
Xerox 820 no less. TAPR's slow little TNC2 has spawned a
commercial industry with more TNCs now in commercial/military
wireless data use than in amateur use. Etc.

Would those things have happened without good old amateur
radio, and good old amateur tinkering? Perhaps, but perhaps
not. We won't ever know, because they *did* happen first on
grungy little old amateur packet radio. How much more could
we do if we weren't strait jacketed by antiquated rules?
No one knows, but we'd sure like to find out.

Michael Jordan and his co-workers are genetic freaks, and millions
of people pay out good money to watch their freak shows. Thus selling
the arenas wouldn't be sensible since they bring in so much profit.
But can the same be said for the amateur radio freak show? Are millions
of people willing to pay good money to come to some old geezer's shack
and watch him beep out Morse *real fast*? I don't think so. Thus your
analogy breaks down and has no merit in the current discussion.

Seems about right. ;-)

I hadn't realized that when you posted a followup that only the original
poster could comment. I think you must have e-mail and usenet confused.
You do know the difference? Also, if you want to take up fencing, I'd
suggest checking out rec.sport.fencing.

73,

PS The lawyer is Phil Kane, not Phil Karn. But I'm sure you knew that.

2818. Invest $5

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-11 00:00:00 UTC
From: Tom Lowe <dont@answer.com>
Message-ID: <32371389.48BB@answer.com>
Source record: 216916

Taking 5 minutes to read what follows could be one of the best decisions you have ever made.

On August 21, 1995, I saw an article in an internet newsgroup telling me I could make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. I spoke to my attorney, friends and wife about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it to be me. After rejecting the idea at first, I realized all I had to lose was the $5 in my wallet, and not much else. So, needing more than just $5, I figured what the heck, and gave it a shot.

Two weeks later, I began recieving money in the mail! I could not believe it! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, I had recieved a total of $32,445! It came from everywhere in the world.

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $5, and you recieve a return on your investment. So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER- PERFECTLY LEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

The procedure is simple:
1) Write your name and address of 5 sheets of paper. Below that, write the words, "Please add me to your mailing list." Fold $1 note or bank draft or money order in each piece of paper and mail them to the following 5 addresses.:

1. Greg Carrol, 3658 Maurice Ave. Ft. Worth, TX 76111 USA
2. Mike Burek, 2007 Sunny Brook Drive, Austin TX 78723 USA
3. Joseph Foreman, 27 St. Georges Cres 3147 Ashburton, Vic. Australia
4. Rick Berk, 17-7 Pondway, Manorville, NY 11949 USA
5. Tom Lowe, P.O. Box 203 17080 Girona Spain

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. you can do this by simply retyping the article or reposting it to other newsgroups with the edited addresses.

3) Post the article to at least 200 newsgroups. There are 17,000, so it shouldn't be hard to find that many.

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a psuedonym, but make sure your address is correct.

Now, here is why the system works:

-Of every 200 posts I made, I recieved 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people= $500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000. Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total income in one cycle= $55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. the more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money?" Big Deal, so you lose $5-but what are the chances of that happening??

There are millions of internet users, and millions of new net surfers every month.

Remember- read the instructions carefully, and play fairly. thats the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that send you money and alwys keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER-HONESTY IS THE BEST POLICY.
ENJOY!!!

2819. Motorola/Techs

It will depend on the rig, but 5 volts strikes me as too low.

I know many radios have 12VDC open circuit voltage
on the key jack. Check the specs of your rig.

We attempted to "work within the system" by contacting the League's
OOC for the area and present him with detailed evidence, including
transmitter fingerprints, etc. His answer was to "help the troubled
teen" by "taking him under his arm" and, like so many league officials,
do absolutely nothing at all.

You can spend hours each month browsing the rec.radio.swap newsgroup, and that costs you big bucks in access time. There is a far less expensive way to get this information.

I now e-mail all rec.radio.swap.posting to each day. No need to spend time on-line browsing. Do all your bowsing off line. I also include all the postings from My own Free Ham Classified service.

You'll never miss another good deal because you forgot to check into rec.radio.swap or The Raymond Sarrio Co's Ham Classified page.Add to that the big $$ you'll save over the course of a year and you can't go wrong.

Subscriptions are only $12 per year for the first 100 sign-ups, $18 thereafter. If interested call the order line below or check out my web page at http://www.sarrio.com 73's Ray

Gary,
I was a bit puzzled by the focus of the survey. Why cw vs. no-cw as
THE pressing issue to bring before WARC? Are we satisfied with the
concept of incentive licensing, as administered by VECs, with multiple
choice question pools that very young children can memorize? Is IT a
world-wide issue? As I recall, incentive licensing was supposed to
promote proficiency by dangling exclusive band segments as a carrot.
Well, technology has changed a bit in the last couple of decades. I
was "proficient" by the FCC's determination in cw, and knowledge of
am, ssb, and fm theory, but I'm certainly notproficient in digital
modes. And the insides of my current fm rigs don't resemble the old
Motorola 41v boatanchor I used to use on the .34 -.94 repeaters from
here to California. I try to keep current, but the educational
channels tell me I'm not growing any new neurons.

IF we need to make class distinctions among hams, I think interest in
modes, bands, activities, etc. should be explored as a criterion for a
way of spreading out the congestion on the air. How about 3 basic
classes of licenses (novice, tech, advanced, or whatever) with
endorsements for cw, packet, ssb, EME, ...? The commercial licensing
system uses endorsements.

I'd hope that we would forever stay away from anything that smells of
type-accepted appliance operating as a distinction from our unique

privilege of homebrewing. Also, years of experience or "service" doesn't make much sense as a criterion, and not just from the neuron-depletion effect. Just because I've driven a car for 35 years, that doesn't say anything about whether I'm a capable, courteous and responsible driver.

I am afraid that the League is focusing on the minutae, with the cw issue at the forefront. Yes, it has to be addressed, because it is an international treaty stipulation. I'd like to see more thought put into how we can continue to cope with the pressures of accelerated growth in numbers of licensees competing for bandwidth, and the attendant need for more commercializaton to "keep our numbers up". The '99 Conference will produce answers; it's supposed to. Since it is, however, a conference, I think we need to bring up some real questions.

Clues needed!! Many rigs are vastly different!! The most reliable method is a mercury whetted relay. These can be very small, but are VERY reliable!!

I don't think that's what's being proposed here, but it's actually
not a bad idea. Subbands are an anachronism given the supposed
flexibility of the amateur service combined with the emerging
technological trends toward more dynamic spectrum sharing.

If you want to get right down to the basic information theory,
the "commodity" that should be rationed to promote spectrum
conservation is not RF bandwidth, but RF *power*. Easing possible
biohazards is a nice bonus.

Way back in 1959 (when I was only 3 years old) John P Costas, K2EN,
wrote a seminal paper "Poission, Shannon and the Radio Amateur"
in which argued strongly against narrowband channelization and
made a strong case that the amateur service was a prime
candidate for what we now call "spread spectrum" methods. He showed
significant gains even from crude analog "SS-like" techniques;
given the modern digital technologies now available to us, his case
is even stronger now.

Hans,

My point is that the ARRL falsely represents to the FCC, IARU, and ITU that it "represents" the (entire) U.S. ham community.

This is false. Only a modest minority of U.S. hams are ARRL members (most non-members voice disgust for the way ARRL is run and the policies it continues to drive home at the FCC as their reason for not belonging).

Of those that are "members", many freely admit that they do not feel the ARRL represents their views and that their ONLY reason for "membership" is to obtain a subscription to QST.

Since the ARRL is going to continue to represent to the FCC, IARU, and ITU that it "represents" ALL U.S. hams, the least they can do is survey the majority of hams who are not "members." (Not that I have any delusions that they will ultimately follow the will of the majority.)

Todd,

Several things make them VERY attractive from a technical standpoint.

1) The ionosphere is more or less transparent at those frequencies.

2) It's easier to generate RF power efficiently (and get low noise figures, etc.) at these relatively low frequencies, compared to higher frequencies ... this equates to longer battery life in portables, which is highly desirable.

3) The lower the frequency of operation, the lower the Doppler shift/spread for a given relative motion between the user and the satellite ... this makes some system problems related to multipath fading rates and "smearing" of signal constellations in amplitude and phase by the multipath channel less severe and relatively easier to deal with (this is one of the major areas covered by my patents, so I'm quite familiar with the problems, such as the irreducible error rate phenomenon). These problems are particularly more severe in the LEO satellite systems than in GEO systems, where mobile motion is the major contributor to Doppler-related phenomena ...

OK, you're an old fart ... <grin>

Seriously, despite your sadly mistaken views, CW is NOT "king under those conditions" ... digital is, plain and simple. No contest. No question. If you don't believe the technical facts, you're not a "bad person", you've simply chosen to ignore reality.

Why don't you read up a bit on today's technology and get your facts straight? ... then your opinion will at least be based on valid data.

Jim,

If you're alluding that what Phil wrote sounds a lot like the things that Gary and I have said about the technical realities of CW vs. modern digital modes, I'm flattered ... (I atrongly *suspect* that Gary would probably feel likewise, but I'll let him speek for himself on that issue.)

Phil's reputation for technical expertise and excellence is well-established both in amateur and commercial circles ... I'd suggest you not "fence" with him ... you'll end up a gelding ...

From: jbarnes@netcom.com
Message-ID: <jbarnesDxJo5J.4L5@netcom.com>
Source record: 217065

Hello,

Apparently my other messages got deleted without explanation so I'll try this again.

I am one of the officers in a college ham radio organization. We are a student club representing ham radio in the University of Georgia. Due to limited funds available for student organizations, we currently receive absolutely no funding from the University.

We are seeking ideas from fellow friends and hams on how to go about receiving funds/used equipments from corporations and other sources. If you have any ideas on who to write to for help or where we can obtain used equipment please send me mail at jbarnes@netcom.com

So far our only equipment consists of two VHF radios and a handmade repeater controller that make up a low powered VHF repeater. Any help in obtaining funding or used equipment for our club would be greatly appreciated.

We have great plans for our club but can't do it without help from somewhere.

Thanks,

Joe Barnes, KE4SWE
BARC - Bulldog Amateur Radio Club (University of Georgia -Athens, GA)

P.S. I forgot to mention, if anyone has ideas for us but would like to verify us, we *are* ARRL affiliated and also can be verified through the Office of Student Affairs at the University. We are an official University Club.

Maybe this message won't get deleted. :)

Gary,

OK, you're right ... CW will find it increasingly difficult to compete.
Maybe we SHOULD set aside a "CW window" ...

I hereby propose that the lowest 25kHz of each HF band be set aside as
"CW ONLY" ... since CW advocates believe (as evidenced by their own
assertions) that their mode is so spectrally efficient, this should be
sufficient to serve the ever-diminishing numbers of CW ops well for the
reamainder of time.

No, it wasn't written by Burt. If you'd pay attention, and read the original
article, it was written by someone on packet and Burt just quoted it, giving
credit to the original author.

You know, this is why we created Ham Radio Online. Ham Radio is actually a heck of a lot of fun!!!! And we are trying our best to report on the fun that most hams (who have not discovered the Internet :)) are having on the air, building antennas, tinkering with equipment, or slogging through a forest on a volunteer search/rescue mission.

Stop on by and enjoy our web site, http://www.hamradio-online.com - now read in 43 countries around the globe.

2859. Open Letter To Carl WA6VSE

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-11 00:00:00 UTC
From: pacrimgolf@kuentos.guam.net
Message-ID: <515beo$rlh@lehi.kuentos.guam.net>
Source record: 217071
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I am writing this letter because I take issue with some of Carl WA6VSE's claims. Let us note first of all that Carl confuses demagoguery with leadership and undocumented conspiracism with serious research. I attribute the social and psychological problems of modern society to the fact that I must protest his use of delirious spoiled brats to doctor evidence and classification systems and make brain-damaged generalizations to support immature, preconceived views. Actually, I undoubtedly insist that his opinion is a lazy cop-out. It's not necessarily the case that he has become increasingly jealous ever since childhood. On the contrary, it is neither possible nor desirable to ignore the issue of misoneism here. A critical reevaluation of some of Carl's politics would be beneficial. It should be intuitively obvious even to the most casual observer that none of what Carl says carries any weight.

In essence, his claims are pure tripe. I myself find his opinions evil, heinous, choleric, and more than a little untrustworthy, by which I mean that thanks to Carl, inane firebrands can now freely silence critical debate and squelch creative brainstorming. You won't hear his flunkies admit that he's logorrheic. You may not understand this now, and I don't fault you for that, but he has a driving need to commit acts of immorality, dishonesty, and treason. At the very least, I don't expect everyone to agree with me. If there is one truth in this world, it's that Carl's beliefs are steeped in spineless absolutism.

Taking that notion one step further, we can see that life is too short to have to put up with pesky lecherous-types. Quite simply, in my effort to uncover Carl's hidden prejudices, I will need to indicate in a rough and approximate way the two shallow tendencies that I believe are the main driving force of modern totalitarianism. Just to add a little more perspective, Carl often flirts with voyeurism. His platitudes constitute one of the many conduits of unilateralism in our culture. Naturally, he has neither honor nor integrity nor even knows what those words mean. Just wait until someone gets hurt as a result of his litanies. Then, more people will agree that his stratagems are not just about Marxism but also about commercialism. Even giving Carl the benefit of the doubt, it remains to be seen if Carl will prevent me from getting my work done by the next full moon. It may be obvious but should nonetheless be acknowledged that we should set the record straight. He and his cronies are puppets of the worst sorts of asinine nobodies there are.

For the moment, I will concentrate on the fact that every morning he asks himself, "How can I fool the masses today?". To some extent, some deep void within Carl makes it necessary for him to turn the trickle of negativism into a tidal wave. The greatest quote I ever heard goes something like this: "We must publicly distance ourselves from soporific slime." You might not care that he always sounds like he's reading a prepared speech, but you'd better start caring if you don't want him to introduce disease, ignorance, squalor, idleness, and

want into affluent neighborhoods. The key point here is that we can't stand idly by and let him create an atmosphere of mistrust, in which speculations and rumors gain the appearance of viability and compete openly with more carefully considered theories. There's no point in arguing with Carl. Of course, it's not quite that simple. His long-term stratagems of infiltration and mass propaganda have been so successful that he can now foment lackadaisical forms of political tyranny. There is little question that he blames others for his bloodthirsty deeds. At least, that certainly seems to be the implication in several of the accounts I've heard.

We all need to be aware of each other's existence as intelligent, feeling, human beings, even if some of us are intemperate ragamuffins. A day without Carl would be like a day without militant alcoholism. Don't let him delude you into denying that he doesn't care one whit about how others might feel. Furthermore, his grievances have no redeeming value. Soulless windbags differ from each other only in the degree to which they attempt to perpetuate misguided and questionable notions of other audacious mean-spirited secret agents' intentions. An inner voice tells me that Carl has a deficiency of real goals. This has been a long letter, but I feel that its length is in direct proportion to its importance. Why? Because some of Carl WA6VSE's theories raise important questions about future social interactions and their relationship to civil liberties.

I have a question. Or two. A what if. What if we all decide to open HF to hams with no code tests. Where do we put them ? Do we decide that HF is no longer subdivided into band plans by license class and just call HF 'HF period' ?

Somewhere I keep seeing 'Support the No Code General'. Does that mean that no code proponents support giving the general phone bands to the no code licenses and leaving the rest of the band as is ? Do we allow no code licenses the use of the lower part of the bands, now used for CW and other digital modes ? Or do we keep them on SSB ?

I know you guys want a no code HF license. But I don't know exactly what you expect to get when or if you get one. I have seen a lot of 'logic' from the Carl Clan supporting the 'plan', but I haven't seen much about what 'the plan' is. That's why I am asking.

From: stan@mutadv.com
Message-ID: <515an0$dkr@news-2.csn.net>
Source record: 217074

I got my annual reminder of the upcoming California QSO Party (CQP) in the mail today (thanks to Jim, WA6SDM), and resolved to look for an appropriate logging program earlier than the weekend of the test ;-)

There was once a Windows program, specifically for this contest, called CQPWIN. Does anyone know if it has been updated in the past two years? Does anyone have a suggestion for a simple, Windows, logging program for the CQP? Jim, WA6SDM, mentions that a number of NCCC-types have written their own. are any of these available, and do they cover the non-CA end of the contest?

Thanks for any help, and 73,

Stan

If you have a jamming problem, the FCC will help. We had a problem with a few people in AZ recently and because of the efforts of our clubs interference committee, one has been issued an NAL for $6000 and in a seperate case, three others have been arrested. The trick is that you have to do a lot of the leg work but we have proved the FCC will enforce their rules if you present your facts right. You can see the storys on these two seperate incidences on our clubs page.

http://www.indirect.com/www/ara

I am sure that our interference chairman would be happy to help any group or individual get action from the FCC.

Carl,

I have to say that is the most far-fetched reasoning I've ever seen.

While I don't like CW and don't see it as anything I'm likely to pursue, the plain fact is that to have anyone believe that the reason we don't have viable high-speed packet links is because of CW, is going WAY out on the proverbial limb.

I'll tell you why packet has stagnated. It's because hams (in general) reflect the apathy and laziness of the general population. Couple that with the (until recently) high costs of those links and you get no forward progress. Everybody agrees (in theory) that we need the network to be there, but nobody wants to PAY for it. Try and ask hams for finances to pay for the radios, TNCs, and computers to run these systems and see how far you get. They'll cough up money for voice repeaters, but not digital ones.

Besides, you can't get more than 2 hams to agree on anything. I remember a few years ago when they (BBS ops, node ops, etc.) tried to get together to form a comprehensive plan for a network here in DE. By the time the "meeting" broke up, there were threats of bodily harm being flung about because these jack-asses couldn't park their egos at the door and compromise for the good of the amatuer packet community as a whole. That's another big reason you don't have the high-speed networks in place as well. 2 people trying to get a high-speed network in place will take longer to do (unless they have money to burn) than if you have 20 people pumping in money for the project.

You don't need CW to build those networks. That's just an excuse, Carl.
If the folks that want it all without code would spend just 25% of their
bitching-time building these glorious networks, we'd all be doing better.

For the record (for those of you Kilocycle Kops out there) I came in on the
No-Code ticket in May of 1991. Got my 5 WPM in August of the same year. That
makes me a "full" Tech. I've spent 15 years doing component-level repair of
electronics. I know the difference between an IC and a cow chip. That doesn't
make me "better" than anyone else, it's just a fact.

I will repeat this, in case you missed it. I have no love for CW, but if *I*
were king, I'd have 3 license classes at the most.

1) Eliminate the Novice. The preferred entrance class is Tech. In my
opinion, if you can't pass that, you shouldn't even be able to operate a
motor vehicle.

2) Roll the Tech Plus and General into 1 class with a CW test of say
around 5-8 WPM and a written test. The written test would be very
much like the current General with a few Advanced elements thrown
in for good measure.

3) Roll together the Advanced and Extra with a fairly tough written test.
This would get you everything on HF *except* for the current Extra CW
segments. In order to get those, you take an *optional* CW endorsement of
say 15 WPM.

4) Eliminate the *verbatim* question pools. You can have pools, but they
shouldn't be the EXACT questions. They should be similar to give a feeling
of the materials you need to study, but that's it.

were king, I'd have 3 license classes at the most.

1) Eliminate the Novice. The preferred entrance class is Tech. In my
opinion, if you can't pass that, you shouldn't even be able to operate a
motor vehicle.

2) Roll the Tech Plus and General into 1 class with a CW test of say
around 5-8 WPM and a written test. The written test would be very
much like the current General with a few Advanced elements thrown
in for good measure.

3) Roll together the Advanced and Extra with a fairly tough written test.
This would get you everything on HF *except* for the current Extra CW
segments. In order to get those, you take an *optional* CW endorsement of
say 15 WPM.

4) Eliminate the *verbatim* question pools. You can have pools, but they
shouldn't be the EXACT questions. They should be similar to give a feeling
of the materials you need to study, but that's it.

Carl,

I have to say that is the most far-fetched reasoning I've ever seen.

While I don't like CW and don't see it as anything I'm likely to pursue, the plain fact is that to have anyone believe that the reason we don't have viable high-speed packet links is because of CW, is going WAY out on the proverbial limb.

I'll tell you why packet has stagnated. It's because hams (in general) reflect the apathy and laziness of the general population. Couple that with the (until recently) high costs of those links and you get no forward progress. Everybody agrees (in theory) that we need the network to be there, but nobody wants to PAY for it. Try and ask hams for finances to pay for the radios, TNCs, and computers to run these systems and see how far you get. They'll cough up money for voice repeaters, but not digital ones.

Besides, you can't get more than 2 hams to agree on anything. I remember a few years ago when they (BBS ops, node ops, etc.) tried to get together to form a comprehensive plan for a network here in DE. By the time the "meeting" broke up, there were threats of bodily harm being flung about because these jack-asses couldn't park their egos at the door and compromise for the good of the amatuer packet community as a whole. That's another big reason you don't have the high-speed networks in place as well. 2 people trying to get a high-speed network in place will take longer to do (unless they have money to burn) than if you have 20 people pumping in money for the project.

You don't need CW to build those networks. That's just an excuse, Carl.
If the folks that want it all without code would spend just 25% of their
bitching-time building these glorious networks, we'd all be doing better.

For the record (for those of you Kilocycle Kops out there) I came in on the
No-Code ticket in May of 1991. Got my 5 WPM in August of the same year. That
makes me a "full" Tech. I've spent 15 years doing component-level repair of
electronics. I know the difference between an IC and a cow chip. That doesn't
make me "better" than anyone else, it's just a fact.

I will repeat this, in case you missed it. I have no love for CW, but if *I*
were king, I'd have 3 license classes at the most.

1) Eliminate the Novice. The preferred entrance class is Tech. In my
opinion, if you can't pass that, you shouldn't even be able to operate a
motor vehicle.

2) Roll the Tech Plus and General into 1 class with a CW test of say
around 5-8 WPM and a written test. The written test would be very
much like the current General with a few Advanced elements thrown
in for good measure.

3) Roll together the Advanced and Extra with a fairly tough written test.
This would get you everything on HF *except* for the current Extra CW
segments. In order to get those, you take an *optional* CW endorsement of
say 15 WPM.

4) Eliminate the *verbatim* question pools. You can have pools, but they
shouldn't be the EXACT questions. They should be similar to give a feeling

This is the text.

He has a point. I just wish he'd used a spell-checker.

Zack W9SZ

****

14.313 mhz
This amatuer frequency is a gapeing wound on amatuer radio ! And all
those persons whom continue the festering, & insight the discord,
should be ashamed of themselves. You show Ham radio in a very poor
public image, and cause a foul PR problem.
Then there are those whom use it as a public toilet, or a podium for
your self-pontifacation. This is equally as offensive as the day to
day abuses. I guess that you don't even realize that the things you
do there are seen by SWL's & hams, the world over, but I guess you
don't really care about amateur radio or what happens to it.
These actions only give those who wish to aquire ham frequency spectrum,
more ammunition to fight with. If this type of offensive activity
continues, ham radio on HF, as we know it now, will go away.
I don't know who. or why the B.A.R.F.(Better,Amatuer,Radio,Federation),
came to be. It's my guess that their "GOD", KV4FZ(Herbie), runs this
"organization". I have heard their "doctrine", they would be better
call; Biggots,And,Radio,Fascits). The members of this "group", seem to
be intent on "taking" by force, this frequency, from whom ever is on it,
at any time of day. On the other end of the rainbow, you have guys(whom
I will not name), that I refer to as "Super-Jews", that do mortal combat
on the airways, and over the phone-lines. They are locked in a struggle
against the BARF bigots(anti-Semites). This type of action, also wounds
amateur radio.
Enough about the "lesser" groups inhabiting 14.313. The greater problems
of this frequency, are "Jammers, interference, unidentified stations,
etc. (I wouldn't want to be heard on this freq. either.) The more persons
that "try" to clean it up, the more they fan the fire. These "idiots",
feed on attention, & revel in the limelight, and having their efforts
acknowledged. I know that there are a few hams out there that have tried
to fight the "idiots", but you will never win, as long as you give them
what they want, ignore them, IGNORE THEM, IGNORE THEM, pretend that
they don't even exist. I encourage all hams to not use that freq.,
don't talk to anyone that does, give them NO AUDIENCE, no listeners,
no fuel, no food, no ammo. With nobody to talk to or listen, these
"creeps", will fade away, lose interest, give up. This is the only way

to deal with "jammers", or QRMMERS as they are often called.
It's a sad day for amateur radio when these type of things are happening, it's hard to say why it has come to be.
I, personally have heard many "older" hams acting in this ill-mannered way, these guys/OT's should know better than this, the older guys should be teaching the younger hams "the art" of operation on ham radio, but they have gone "crazy" or something, they act like spoiled little children, bitching & jamming when anyone "dares" get near "their" frequency. As far as I know the FCC's rules state that "No stations have sole rights to operate on any frequency, when an existing contact occupies that frequency." There is the problem, even when the said frequency is quiet, and no stations are heard, these OT's think that nobody that is not a member of their "group", should be allowed to use it. The same goes for "NET" freq's, if you dare make a contact anywhere within 5 khz of "The (God's gift) to amateur Radio Net" freq. they turn into a bunch of Jammers, throwing carriers & noise on the offending operators. This makes them as bad as any other jammer.
The more ill-manners, bad operation, jamming, and over-all poor operation, that continues, the less likely it will be that we can "justify" the spectrum that hams use.
"Abusive language, in the name of "Free speech", is an abomination."
We need to put the "SERVICE", back into the AMATEUR RADIO SERVICE, and the Manners back into our operations, without it, there is no difference between Hams and CBer's

First, there is nothing in your reference that mentions sharing.

Second, I do not know how sharing could work but I have not seen the proposal. However, I suspect it is not really necessary to examine the proposal in detail because primary usage is likely the ultimate goal. If sharing 'can' work, no one on the leo side has advanced a proposal as to how this might be accomplished. Rather an important consideration. If they really thought it could work, you would think they would have at least given a small clue clue as to 'how' this could be accomplished.

Third, although it is likely true that ARRL had more information than they chose to mention, (it would be surprising if they did not, since ARRL is more directly involved with the committees than the hams could ever be as individuals) , I think ARRL came up with the best possible response. They had a better sense of the politics. The ham community by and large had little sense of the politics and they couldn't be expected to have it. The average ARRL ham expects his lobby group to do that for him. He supports ARRL with his membership dollars. This is the way it should and basically did work. If we were to wait until the technical issues about the possibilities of sharing could be thoroughly examined in complete engineering detail, we would have not been able to 'send the message' in the quick time frame that was required in this case.

No accusations but some frustration. At a time when the ham community should be congratulating itself for a job well done, for doing the

only thing it could do and doing it very well lacking the money and influence of the commercials, you make a post that is negative about the letter writing campaign with little basis for support, imho. Sorry, but I think if everyone had waited for the supposed 'facts' as you did, the WG would be much closer to annexing 2m than it currently is today. I think ARRL displayed effective leadership in this case and obtained the intended results. They have done a lot to redeem their position as the voice of amateur radio, even if we don't end up winning. They did manage to do the best any organization could with the resources they had (basically people (us), and not a lot of money).

What makes you think the ham community should be congratulating itself
for a job well done? Is the job 'done'? What is negative about
my post?

I've been on the net long enough to recognize an e-mail bombing in the
works. If 1000 amateurs write physical letters to the FCC, some low-paid
clerk sifts through the mail bags - if 1000 amateurs write e-mail to
individual FCC employees, these well-paid employes have to spend time
sifting through their mailboxes. If you don't think this is a hassle,
I'll tell you how to create a 'sendsys' Usenet control message and
you can tell me what you think about a flood of mail.

I doubt that Sumner realized how anti-social an e-mail bombing really
is when he encouraged all hams to do it to the IWG-2 committee members,
but that doesn't change the fact that it was anti-social. Am I being
negative when I point out that the ARRL leadership encouraged the
hams to do something considered very rude? Again, if you don't think
an e-mail flood is rude, you haven't been there yet. It is a kind of
terrorism.

Furthermore, the committee was deluged with messages that are almost
certainly content-free as far as they're concerned. The only content
those letters can be expected to have is "don't take away 2m or 70cm" -
and the IWG group probably isn't planning to take away 2m or 70cm,
despite the paranoid speculation to the contrary.

>Sorry, but I think if everyone had waited for the supposed 'facts' as

Again, what results have the FCC accomplished? Have 2m and 70cm been
removed from the candidate list? Why is it time to party?

Some of the software manuals I've read are far more difficult than any of
the amateur exams I've taken, and I've taken 'em all. :-)

Also, while we don't fabricate our ICs by hand from beach sand, there is a
certain amount of learning that goes on just by using a new mode or piece
of gear. Don't discount that--I think it's a very important aspect of ham
radio. We play, and we learn. Not all of us are circuit designers or
engineers, but we still know more than we would otherwise.

I have a music and theatre degree. My job is in computers and networking.
I owe my technical background--and thus my livlihood--to ham radio.

My friend and I will be driving to Pittsburgh to hand deliver our 610-V forms to the Mellon Bank. We feel this is the only way we can get our own applications in early.

To cover expenses we have decided to see if anyone would be interested in having us deliver their 610-V forms and help us with the expenses. We will arrive Sunday night and be there at midnight or whenever the doors open.

If you are interested in having us hand deliver your 610-V form please reply by e-mail. Depending on the number of responses we will figure out what the contribution should be.

The question is, how efficiently is it using the channel? If you have to run a TXDelay parameter of more than 50mS (which should be the absolute maximum considered usable for 9k6) then you're spending more time sending sync flags and rubbish than actual data!

Any radio not capable of operating on a channel running a TXD of 10-20mS is *not* 9600 ready, regardless of what the manufacturer, retailer or friendly ham down the road says.

Quite separate from the TX problem is the question of how long does the receiver take to lock onto an incoming signal...I guarantee that if somebody transmitted a 9600bd data packet to you with a 10mS TXD it would be gone before your RX even knew it was there. Get a whole group of people on a channel with radios capable of that and get them talking and then put *one* user on the channel with a slow radio and *nobody* will get any useable throughput from that point on! Why? Because the slow radio won't hear any of the other traffic and will continually transmit retries over the top.

To reiterate, any radio not capable of running between 10 and 50mS TXdelay (or coping with others doing so) is *not* suitable for or capable of efficient 9600bd packet operation.

Regards,
Rod.

This comming Sunday...

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
September 15th, 1996
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

Announcing NEW Ham Radio.FAQ

This file started as a regular USENET posting called "rec.radio.amateur
.misc Frequently Asked Questions".

The evolving file was distributed far and wide thanks to passionate
contributors. The file was abandoned in 1994 and has been resurrected
now on the WWW for currency and convenience.

Ham Radio.FAQ contains 3 chapters and many, many links to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or soon-to-be Hams
that you know or share with them the URL to this site:

I think you have the sides reversed. I've heard the praises of Morse Code
from the pro-code club, even when those praises or claims are
demonstrably false. The brick wall is there and apparently created
by too many hours of pounding brass.

> Besides, if I recall correctly, Phil is now an attorney, and I know better
> than to fence with those guys.......

Get with the plan Jim, wrong Phil. I'd suggest you read up a little
on digital communications techniques, you'll most certainly come across
Phil's name.

I agree whole heartedly with all of the above, Dana.

Not to mention the fact that the ARRL came back a few days after igniting the bomb and said 'Opps.... we screwed up'.

>
>Don AC6TG

Well, you're entitled to your opinion, but what does that have to
do with the notice you are following up?

Could it be because the ink is still so wet on your own license
that you don't recognize that a WA6xxx call sign dates the holder
as being licensed no later than the mid-1970s? If you still don't
understand, that means he's an "old Tech", IE he took a code test
and the full General written to get his license.

What if I said that it is my opinion that no one licensed less than
20 years is qualified to speak to this issue? Too bad for you, right?
Since I've been licensed 32 years (33 this November), and since Carl
has been licensed 25 years, we're qualified. Obviously you're not.

But I don't hold that opinion because I've read the Communications
Act of 1934 which specifically states that it is to apply to "all
the people of the United States". Thus every person in the US is
entitled to address this issue of licensing requirements.

Take it to .antennas, I did and got some superior help!

I believe these ferrite bar antennas you refer to are simple loop antennas
with ferrite cores as opposed to air. Loops that are separate or just
tapped separately.

No, Carl. Digital is NOT king under those conditions.

If digital were so wonderful, it would be in use for some of the
simple weak signal modes. However, it is *not* in use for moonbounce.

Digital is not in use for aurora.

Not only are most of the popular digital modes quite a bit below
the performance of the best digital modes, but the digital mode
equipment is not well suited to emergency operation.

While it is possible to construct a computer/digital station using a
laptop computer and portable interfaces, the simple truth is that
computer stations are generally quite a bit more complex than their
non-computer counterparts.

When I can pack the 'digital' station in the same space and
weight as a small CW station, operating off of small batteries
for extended periods of time, and for the same COST, then you
may begin to have a claim. Until then, we are comparing amateur
with military budgets.

Alan

>PAY for it. Try and ask hams for finances to pay for the radios, TNCs, and
>computers to run these systems and see how far you get. They'll cough up money
>for voice repeaters, but not digital ones.
>

The "radios, TNCs, and computers" part is a BIG part of the problem.
The (computer+TNC+radio) model is backward, limiting, and expensive.

Try (computer+RF_modem) ... problem is all the appliance operators can think of is (radio+TNC+computer)=(big_bucks_4_1200/9600SLOW))

New blood and new ideas are what are needed to leap forward ...

>Besides, you can't get more than 2 hams to agree on anything. I remember a few

>comprehensive plan for a network here in DE. By the time the "meeting" broke
>up, there were threats of bodily harm being flung about because these jack-
>asses couldn't park their egos at the door and compromise for the good of the
>amatuer packet community as a whole. That's another big reason you don't have
>the high-speed networks in place as well. 2 people trying to get a high-speed
>network in place will take longer to do (unless they have money to burn) than
>if you have 20 people pumping in money for the project.
>

There should be no need for agreements ... standards already exist (you're using them as you read this ... TCP/IP, SMTP, POP, NNTP, etc. etc. No need to re-invent the wheel ... interoperability is also important ... otherwise the ampr.org domain is DOOMED to perpetual isloation ... the place where there's LOTs of room for improvement and experimentation and advancement by hams is in Layer 1 and Layer 2 and in

the Application Layer ...

[deleted alternate licensing proposal because, since it doesn't eliminate the CW test it doesn't address the problem]

Jim,

I can't speak for everyone ... I've never purported to do that ...

What *I* believe should happen is that no-code licensees should be
allowed to demonstrate technical knowledge equivalent to whatever
classes of license exist ... they should get the priveleges that go with
their level of technical proficiency (up to and including extra class,
if the existing classes are kept intact)... they would NOT be permitted
to operate CW unless and until the proved proficiency in that mode
(option ... allow novice class "learners" priveleges in the existing
novice bands ???)

A "no-code extra" would have the same privleges as any other extra of
equal technical proficiency ... he just wouldn't be able to operate CW.
He could operate SSB, FM, ATV, packet and the other digital modes for
which he is qualified.

Sounds simple enough to me ... how's it sound to you?

Thanks for reading this note. I'm posting for a friend who is a ham.

Hi,

I will soon be backpacking for a couple of weeks in the San Juan National Forest of southwestern Colorado. I would like to find out if there are any hams in Pagosa Springs, Bayfield, Southfork, Durango, or any other areas near the forest, who have internet capability and could relay brief messages about my location and welfare, received from me via amateur radio, to my family via e-mail. I can currently operate on 2 meters and 220 MHz using a 3.5 watt handheld on each band. I only have one PL board working currently, however, so I'll have to put it in one radio or the other, depending on what kind of coverage is available in the area. The radios are identical except for frequency. I will probably start out at William's Creek Lake and then pack into the Weminuche Wilderness. Also plan to do some motorcycle riding/camping in southern Hindsdale, southern Mineral and western Archuleta counties. May also do some riding in La Plata county. Any advice on popular simplex frequencies in the area and repeater pairs/coverage on each band (including PL requirements) will be greatly appreciated. I can possibly rig a small dipole (or climb a tree :) if necessary. Any advice on specific places to ride or pack also welcome.

If you think you might be able to assist me sometime during the next two to three weeks (date not certain yet) please e-mail Tom and he will make further arrangements with you.

Thanks for any assistance.

Mark

>Thanks!

>Bob Nagy

The coil with the larger number of turns is resonated by the
tuning capacitor to the receive frequency. The small coil
couples some of the energy to the first transistor through
magnetic transformer action. The input impedance of a
bipolar transistor is fairly low requiring the impedance
transformation. Coupling the transistor directly to the
resonant circuit could lower the selectivity to images and
reduce the receiver sensitivity.

If you can find a copy of the old RCA Transistor Manual they
have schematic diagrams in the back for lots of different
radio and electronic circuits.

Loosly couple your external antenna to the end of the larger
coil which is not grounded. Watch out for overload and
static discharge which can zap your radio's RF transistor.

BOSTON AMATEUR RADIO CLUB ANNOUNCEMENT

FOR IMMEDIATE RELEASE
FROM: Mike Ardai, N1IST

FOR FURTHER INFORMATION, CONTACT: Mike Ardai, N1IST
n1ist@netcom.com

The Boston ARC and MIT Radio Society will conduct a Morse code class. The class meets on Tuesdays, beginning on 9/17 and running thru the end of the year. Classes will run from 19:00 to 21:00 local time.

Code speed and content (learning the code, improving your speed, etc.) will be decided based on what participants want.

The class will meet in MIT Building 1, room 203. Enter from 33 Mass Ave or enter the main entrance at 77 Mass Ave and turn right to enter building 1. The class is on the second floor.

PUBLIC NOTICE

Federal Communications Commission
1919 M St., N.W.
Washington, D.C. 20554

Release Date: September 11, 1996

Wireless Telecommunications Bureau Makes the Amateur Station Vanity
Call Sign Request Available for an Electronic Filing Test

An electronic test version of the Amateur Station Vanity Call Sign
Request
form, is available on the Internet at
http://www.fcc.gov/wtb/amradsrv.html,
(click on Interactive Beta Test Server to access the form). Detailed
filing
instructions are available by clicking on the item number on the
Internet form.

This Internet electronic filing test will be available for approximately
one week.
In the next few months, the Wireless Telecommunications Bureau intends
to
allow applicants for all services to submit their application over the
Internet
and encourages all parties that are interested in electronic filing to
participate
in this test. Please submit your written comments and suggestions
regarding electronic filing to the Wireless Telecommunications Bureau at
webmail@fcc.gov.

A future public notice will be released announcing the availability and
instructions for accessing the production version of the electronic
Amateur
Station Vanity Call Sign Request form.

For technical assistance, please contact the FCC Technical Support
Group at (202) 414-1250.

For general questions regarding the application, please call the
Wireless Telecommunications Bureau, Consumer Assistance staff
at 800-322-1117.

(snip)
:Jim KH2D
:(http://www-csag.cs.uiuc.edu/individual/pakin/complaint)
:

Ah, Jim, clever, but using the three paragraph option on the
referenced complaint letter generator would have allowed you to make
you point and still troll.

Sigh, what *is* it about hams that leaves so many humor impaired?

Up here, in the land of *fresh* fish, we often tell the visitors that
if a fish smells like a fish, one probably shouldn't eat it.

(Such advice doesn't seem to work with my dogs, but then, they seem to
have a perverted sense of humor (or taste) or perhaps simply a
different digestive tract.)

So, what does this have to do with this newsgroup (indeed, what does
anything have to do with this newsgroup)?

The ham groups seem to go through cycles. They always will: code/no
code, ARRL is bad/ARRL is good, *&(&(is evil, etc. etc.

As the summer winds down, as the commercial services crank up their
promotions, as it becomes darker each evening and people spend more
time on the net, we will certainly circle along to the "trolling"
cycle.

What is a troll?

A troll is "flame bait" but often with a bit of verisimilitude.

I grabbed this a while ago from an nl site I have since lost:

trolling -- a style of fishing in which one trails bait through a
likely spot hoping for a bite. The well-constructed troll is a post
that induces lots of newbies and flamers to make themselves look even
more clueless than they already do, while subtly conveying to the more
savvy and experienced that it is in fact a deliberate troll. If you
don't fall for the joke, you get to be in on it.

Trolls seldom work in moderated groups -- unless they are *very* good;
in an unmoderated group such as this, with a membership that often
wears its emotions on its shoulder like chips to be knocked off,
trolling works and is always disruptive.

So, the bait *will* be dropped back in our waters, and many of us
will be caught. (I fell for a silly one a few years ago.)

Maybe we will keep our sanity and the nice peaceful nature of our
"stream," or maybe we will take the bait and thrash around for weeks.

A thought:

If a post raises your ire, simply note it and move on. If later you
still feel you must respond, consider it is probably flame bait or a
troll. Finally, ask yourself whether you want to continue the poster's
thread by replying to it -- in effect, dignifying the post.

Oh, and trolls can come from our own members; sometimes they are actually
humorous.

I can't let this one pass. About two or three months ago I was involved in a discussion on .misc about why I supported CW. I had yet to do my tests then. My main reason for wanting to do the Morse test was the relatively easy entry into real homebrew afforded by CW TX's. Gary and others were opposed to the CW requirement in the test. I supported it for the reasons given below.

I have been quiet since then. But in the interim, I have passed my Novice and Tech exams. My CW TX is all but complete. This is not a kit, but a from-scratch homebrew project, based on a 6LR8 TV sweep tube. With the power being fed to the circuit, I will get about 35W to 40W. Gary, despite your protestations to the contrary, it is hard to beat a simple CW TX for ease of design and construction, especially when dealing with powers above a few watts. It is a great entry point. BTW, my profession involves the development of device drivers & microcontrollers and work on new CPU designs. I say this not to brag but to explain that I am no digital myope or luddite and thus am not opposed to digital modes.

This may single me out as arrogant or puritanical, but I do not consider wiring a module to a PSU as homebrew. Too much of the work has been done already. If the entry point became nothing less than some digital rig, it'd be the end of real homebrew and we'd all become module pluggers and appliance users, without any real understanding of the foundations. We would encounter few of the real, physical difficulties. One could argue that the TX could still be developed

and thence tied to the computer. But the price of the project would jump from a few tens of $'s to at least a few hundreds of $'s, with the complexity going up significantly - thus making the entry point much more expensive and more difficult.

I recognise there are many occasions when using monolithic or integrated devices is mandatory. However, I think it is a poor starting point as no gut feel for the device's operation is aquired (IMO, of course). If you do have a gut feel for the underlying science, then I maintain you'll make much better use of the integrated devices.

Again I must say that while I don't like unnecessary government interference in my life, I have a hard time opposing the requirement to learn something, especially something as easy as CW (15 minutes per night for a month folks - is that really too hard?). Some opponents of the CW requirement remind me of my childhood school colleagues who complained loudly to the teacher about having to learn something because, "I'll never use this". With the hindsight of age, one realises just how silly such sentiments are.

And again, if the CW requirement must go, then I maintain one can use the same arguments to eliminate most of the technical questions. Except for some propagation knowlege, why would anyone need to know what a transistor symbol is, or what the block diagram of a phase modulated TX is? How does that knowlege affect today's appliance operators? Would it not be a sad day if it came to that? The value in the license would be lost.

If the technical requirements of the license were dropped, how long would it be before the FCC started mandating emmision tests on homebrew equipment? It is a natural progression (regression?). Have you priced FCC emmision tests recently ($500 per half day - the usual minimum time slice)?

The CW requirement caused me to enter the field, for I am interested in its homebrew aspects. With the CW requirement, I know there are others out there with whom I'll be able to communicate using my homebrew CW TX. There is no simpler, low level, entry point than a CW TX.

Cheers,

Chris (KC5VQL)

Carl,

I suspect that he was possibly referring to the fact that you are clearly
a technical type who is a proponent of having no code requirement for HF
operation. Perhaps it was a play on words for which he forgot the
smiley.

On the other hand, he may have figured out what button makes you fume and
just wanted to watch the show. :-)

> Anybody have any suggestions as to a good program and or teaching tape
> or book for it??

> I currently listen to Shortwave but can't copy the code no matter what.

> Any assistance would be appreciated.

Hi Jeff, I would start with the Gordon West code tapes. They are usually advertised every month in CQ and are also available from the W5YI publishing group, ads also in QST and CQ, maybe also 73. His tapes are very well done, and I feel a better beginning point than the ARRL tapes.

You can get some other ideas from my short piece on improving CW skills in the Contesting section of this month's CQ magazine, page 92 of the September issue.

I hope you learn quickly, and come to enjoy the fun of the mode as much as thousands of the rest of us do about the world! Try listening on 20 meters, if you now have a rcvr. Compare the number of readable QSO's going on in the middle of the day (probably the best time for 20 at this time of the sunspots minimum) on both the SSB portion of the band, above 14150 in the US and down in the CW area between 14000 and 14060 or so. You will be surprised at the very great number of useable CW signals, especially on weekends compared to the rather poor readability of the weaker SSB signals. All this just to illustrate that there are a LOT, read hundreds at any given moment on all NINE(9) of the HF amateur bands using and enjoying the CW mode.

By the way, contrary to what you would believe from messages on the newsgroups, CW is very much alive and doing well in the commercial and military world. In the Mediterranean Sea weather info is provided to ships ONLY by CW be the Italian station IAR, Roma Radio; weather to the Indian Ocean shipping is ONLY provided be the India government via CW on both MF and HF frequencies. The British Royal Air Force is still teaching Morse Code, and 18 wpm skill is required to pass; No.1 Radio School at RAF Locking, 13 week course. CW is used in the RAF for variouw ground to ground and ground to air circuits at RAF bases throughout

the world.

This past June 28th, Russian Cruise Liner, Alla Tarasovia, had no means other than CW to call SOS. The Scotish Stonehaven Radio discoverd the CW signal, and alerted the Aberdeen Coast Guard. 71 passengers and 61 crew were saved from possible disaster because of an alert CW competent radio operator monitoring the bands. All other menas of communication had been lost, for reasons I do not know at this time. By the way, the supposed wonderful GMDSS satellite rescue system for ships at sea is in a state of near uselessness. BBC TV news reported of July 16th that 95 percent of the distress calls now being rcv'd are false alarms! Falmouth Coast Guard has recv's 959 false calls in the last 12 months; thank God somebody is still monitoring the sea shipping frequencies for CW emergency calls, and are competent to handle situations as they arise.

But, Jeff, learn and enjoy the CW mode just for the personal pleasure you will derive from the mode. None of the nonsense one hears nearly daily on SSB occurs on CW. Fights over frequency, exchages of results of visits to the MD and today's sysmptons, etc., etc. No net battles about valid DX contacts or not and so forth; just a lot of people having a good time.

Go to work, put in the time and learn the mode and have fun, that is the only justification for an amateur to learn/know CW: it is a really FUN part of the hobby.

Good luck and 73, Jim, AH6NB

2922. PLEASE Info on the Transceiver/Scanner

Hello,

Could somebody advice me if there is any handheld transceiver/scanner
nearby:

1. Tx/Rx (AM) on Air Band (118-137MHz)
2. Tx/Rx on VHF (NFM) 156-225 MHz (ground comm.)
should be on the 168.xxx MHz
3. Dual fx receiver (it is not requirement)
4. Wide band VHF/UHF receiver - scanner

However, I don't care about HF (SSB...) but I want a good performance
on the VHF/UHF receiving (app.100-500 MHz AM/NFM) and above.

Thank you so much for the help and any information.

We have to examine why there is licensing, and why there are licensing exams, in order to see what should and should not be on them.

The spectrum belongs to everyone under the governing doctrine of The Common Heritage of Mankind. This is the doctrine under which all commons property is regulated (in nations founded on English Common Law, or conforming to UN treaty declarations on the nature of commons). We cede to the government the authority to regulate this common property so as to maximize its benefit to everyone. (This is spelled out in the Communications Act of 1934.)

Since the spectrum is finite, but the uses to which people wish to put it are infinite, some form of regulation and control is required. Spectral allocation by service, regulation and licensing of stations, and (in some cases) licensing of operators are the ways in which this control is expressed under CA'34.

The sole legitimate reason we have licensing exams is to assure the government, as much as feasible, that we understand the regulations, and understand the technical and operational aspects of the spectrum and equipment we are permitted to use sufficiently to enable us to conform to the regulations while not presenting a hazard to ourselves or to others.

(This limitation to legitimate concerns is central under the Jeffersonian concept embued in our Constitution that government is limited in the extent to which it may intrude into the private sphere to only that amount of regulation necessary to accomplish its defined and limited purposes.)

Now it *should* be obvious that operators of stations using similar equipment in similar spectrum should have to pass the *same* test. There's nothing unique about operation at, for example, 14.173 MHz that would require a different examination from operation at 14.176 MHz. Operators on either frequency need to satisfy the government's legitimate concern that they know what they are doing when operating there. Since similar spectrum, equipment, power levels, and modulations are being used on the two frequencies, the examination required needs to be the same for operators using either one.

That is not currently the case, however. That is a major fallacy of Incentive (to pass higher speed code tests) Licensing. There is no meaningful relationship between the privileges granted, IE slices of essentially identical spectrum, and the material tested, IE basically tests of different Morse receiving speeds. That should be corrected. Nor would it be sensible to have totally different tests to achieve essentially the same operating privileges, which is what you are suggesting. Either an operator knows those things the government legitimately feels are necessary for him to know to operate properly in that spectrum, or he doesn't.

What I am suggesting here is that since there is no meaningful difference in kind to the operating activities performed by Tech Plus, General, Advanced, and Extra on HF spectrum, there should be no difference in the tests they are required to pass to gain those privileges. There may be aspects to VHF+ operations, increased biohazards and different propagation modes for example, which are sufficiently different from HF to perhaps justify a different test for access to that spectrum, though I think the factors are in general similar enough in kind to allow one test to cover both specral areas.

I haven't yet addressed what should be on this exam to satisfy legitimate government concerns, but I hope I've made clear why there should be only *one* exam and *one* license class. If the government's concern is legitimate, then everyone needs to satisfy it, if the government's concern is illegitimate, then no one needs to satisfy it.

It is obvious that in order for a licensee to conform to the regulations, he must know and understand the regulations. Thus a test element on regulatory matters needs to be passed by all amateurs, and, as noted above, it needs to be the *same* test for all amateurs, and I'd add that it should be comprehensive. I don't think it should be a test of memorization, since that is of no real value. I suggest it be an open book exam, IE Part 97 available to the applicant during the exam, and it should present real world situations where an amateur might need to interpret and apply the regulations in order to know how to proceed. This element should be pass/fail, IE lack of sufficient knowledge of the regulations should be sufficient grounds to disqualify an applicant for a license of any kind.

It should also be obvious that electrical safety and biohazard knowledge is required of all applicants in order to satisfy the government's legitimate concern that the applicant cause no harm to himself or others. This too should be comprehensive, and again could be open book with real world situations presented which would need to be resolved using the applicant's knowledge and using the reference materials he would be expected to consult in the real world. Again this element should be pass/fail because lack of safety knowledge is sufficient grounds to disqualify an applicant.

Because all amateurs are permitted, even encouraged, to build, modify, and repair radio equipment, and because all amateurs need some knowledge of how equipment is supposed to operate in order to be able to determine if it is in fact operating correctly, even if they never intend to build, modify, or repair that equipment themselves, a test on electrical theory and practice is required.

While I'd prefer a single test here as well, for operations different in kind, different sorts of tests could be required, IE different levels of knowledge may be required for low power versus high power operation, different sorts of knowledge may be required for low band versus microwave circuitry, different knowledge may be required for different modulation forms, etc. If carried too far, this could lead to a myriad of license classes, each balkanized into different operating classes, not easily separated one from the other. So I prefer a single comprehensive test here too. Again, it could be open book, with the usual references an amateur would be expected to consult available to him during the test. Again, this element would be pass/fail.

Subsumed under the test heading above could be a question or two on OOK Morse modulation as one of the varied methods an amateur would be permitted to use to encode text. As part of one comprehensive exam element, these questions would have the same weight as other questions on other text encodings. It would not be pass/fail by itself as a standalone element.

But if we decided it would be necessary to balkanize licensees into various classes, we could have separate test elements on each of the various encodings, with the corresponding privilege to use that encoding being dependent on passing that particular element. This privilege shouldn't have anything to do per se with authorized spectrum, just authorized modulation type. That's in keeping with it being legitimately required knowledge to be able to operate so as to satisfy the goverment's legitimate licensing concerns. It would, however, be illegitimate to require passage of a test in one encoding in order to obtain privileges for the use of a different encoding.

I *really* think it is a bad idea to balkanize amateurs for many reasons, and this would also raise a substantial barrier

to the introduction of new modes to amateur radio. Who'd create
the test a priori for a method which only exists as yet as a gleam
in an experimenter's eye? So I oppose by mode licensing, but it
is a legitimate way licensing could be structured while still
being in keeping with government's legitimate purposes.

>not the lack of technical skill.

Commercial interests? Are you proposing that there is a conspiracy among amateur manufacturers to hold packet speeds down? What about the GRAPES 56 kb RF modem? It has been available for 8 years as a kit, and is now available W&T from PacComm. If you want 56 kb packet links, there's your commercial off the shelf solution.

Some of us have been running 56 kb down here for 8 years. You could have been doing the same thing. Why didn't you?

Could it be because you didn't have a critical mass of digit heads to make it happen? That seems likely. Networks aren't much good unless there are enough people wanting to be connected to make them worth installing. Fortunately, we were able to achieve critical mass down here, but not without a lot of work preaching the gospel and overcoming the myths of the naysayers.

I don't know how many miles a core group of us have travelled to put on demonstrations and to teach seminars. I even produced a half hour tutorial video. We had to produce a paradigm shift in the minds of a lot of folks who were stuck in the rut of thinking that you had to use a FM voice radio to do packet, or those who whined "I can't type that fast". Fortunately, we found some new blood who hadn't yet had their minds closed and thought that some real speed would let them do neat new things. It does.

But sad to say, more 1200 baud operators pop up every day and decide to build a "network" on 145.01 MHz. They have to learn all over again what the words "congestive collapse" mean. Sigh.

>
>Did you ever consider that the state must prove that YOU were the
>interfearing station? Or did you think the officer was going to ask you
>to cough up some cash on the spot?

It is quite obvious you've never been on the receiving end of a police raid. A group of heavily armed masked thugs kick in your door, throw you against the wall, ransack your place, confiscate anything they damn well please as "evidence", and then after you get the charges dismissed as false (costing you thousands in lawyer fees), you still have to sue to get your goods returned (likely in not very good condition). And they won't pay to fix the damage they did to your house either. You go back to court to sue for damages and guess what? They have sovereign immunity and you can't sue without their permission.

It is bad enough having to deal with federal agents, who (not counting ATF) are at least generally polite while ransacking your place. Adding in the local thugs as well is not a good idea at all. The only difference between local police thugs and the Mafia is that you might actually get the protection you're paying for from the Mafia.

*** Mid Atlantic VHF Conference ***

The 20th Annual Mid-Atlantic States VHF Conference sponsored by the Mt. Airy VHF Radio Club will be held on Saturday, 5 October at the Days Inn in Horsham PA. Technical presentations relating to VHF/UHF/SHF weak signal operating will begin at 9AM.

The Days Inn is located just north of exit 27 (Willow Grove exit) of the PA Turnpike, just north of Philadelphia, in Horsham, PA. Rooms at the Days Inn can be reserved by calling 215-674-2500. Mention Pack Rats for a discount. The Days Inn is filling up quickly, so reserve soon. Additional lodging is available in the Horsham area.

*** HAMARAMA ***

On the following day, Sunday 6 Oct. the Packrats will have their annual hamfest at the Bucks County Drive In Theater, about 5 miles north of PA Tpk. exit 27 on Rte. 611. Talk-in on 146.52 simplex and the W3CCX repeater on 224.58.

Ron, WZ1V has placed the flyer for the events, including a preliminary list of presentations, on the N.E.W.S. Group web page:
http://uhavax.hartford.edu/~newsvhf/hamarama.html

For more information on the technical conference or a possible presentation slot, contact John Sortor, KB3XG, at 610-584-2489 or at JohnKB3XG@aol.com.

Sorry, you must be lieing. According to Carl-The-Omniscent, the CW examination scares away the technical elite. The fact that you enjoy CW means that you absolutely, positively CANNOT be an engineer. If you were, you wouldn't like CW, and you'd think amateur radio consists of a "bunch of geeks who know less about RF than you've forgotten".

This is a friendly reminder that the Internet Space Weather and Radio Propagation Forecasting Course will begin on 27 September. Those who are interested in enrolling must do so within the next two weeks (by 27 September).

Briefly, the Internet Space Weather and Radio Propagation Course is the most comprehensive course available to teach people about the Sun, the disturbances that can affect the Earth, and how to accurately predict how they can affect the Earth's environments.

This is an exhaustive and comprehensive course that should be taken by everyone interested in radio communications, solar and space weather conditions, satellite vulnerabilities, electrical hydro operations, navigation, etc. The course optionally includes some of the most powerful tools in the world for probing the ionosphere and studying solar and geophysical data.

For a complete description of the course outline and course objectives, please visit the WWW site: http://solar.uleth.ca/solar/www/course.html.

For those who don't have WWW access, send e-mail to: COler@Solar.Stanford.Edu to obtain a course outline via e-mail.

2939. Re: Amplifiers: Class C, etc Whats the difference?

Newsgroup: rec.radio.amateur.misc

Without getting too deep, a class C amplifier is biased off when when a drive signal is not present, it is not a linear amplifier and can only be used as a amplifier for CW or FM modes. A class AB-1 amplifier is a linear amplifer being biased in the linear region of the active device. A linear amplifier is useable with any mode because the output is linearly amplifier copy of the input.

: Ryan

: ryan@poboxes.com

If you are seeing amplifiers here, they are probably the linear type,
usually class A in order that the original RF signals they are amplifying
are not distorted. Other classes are used, depending on the application
like the AB you are familiar with. Varying output power is available,
and I have never run a linear myself. This is called 'barefoot'.
Some folks never run more than 5 watts and these are the QRP'ers you
see referred. The big guns are usually looking for DX and have
elaborate yagi's mounted on towers, or acreage to put out lots
of wire in different configurations to supplement their high output
power. Basically, the amplifiers are biased to operate in the
linear portion of their operating curves. Some of these tube type
linears dissipate so much power, you generally have to run on 220VAC
power. There are solid state versions too. Commercial amplifiers
may even be water-cooled.

Class B operates so that plate current (or collector current)
flows during only 180 degrees of the input signal, for example
only the positive half of a sine wave input signal.

Interesting stuff, more in the ARRL Handbook and other sources.

see ya.

THE WESTERN CONNECTICUT HAMFEST
Sponsored by the Candlewood Amateur Radio Association

Just 14 miles from the NY/CT State line!

Sunday, Sept. 15, 1996 0900-1400
Edmond Town Hall Route 6, Newtown, CT
Tables inside Tailgating outside
ARRL Sanctioned Handicapped Access
Door Prizes Ample Parking
Gourmet Fare Rain or shine

Talk-in 147.12/.72 PL 141.3

General admission $4.00 at the door (what a deal!)

Tailgating $6.00, inside table reservations $10.00 each, (both
include 1 admission), mail to:
Candlewood Amateur Radio Association, PO BOX 3441, Danbury CT 06813

For more info, phone (203) 790 7041 or (203) 438 6782.

Hope to see you all there.

>

I don't really see accumulation of surplus cash as a bad thing. A million dollars isn't what it used to be, and I think it's an indication of good management to have a bit of a bankroll around. ARRL does, after all, need cash to make its payroll and publish its books. If one year, there was no money to put the handbood together then the whole thing might collapse very quickly. What'd be more scary is if the ARRL was getting big debts.

Now, if there are big expensive perks for directors, now that is another issue.

For the folks who don't know about the old tech license, Carl passed
a 5wpm test, or 25 characters per minute - that's one character every
2.4 seconds. Painfully slow.

>... since Carl
>has been licensed 25 years, we're qualified.

1996 - 1975 = 21, not 25, Gary. Push the wrong button on your calculator?

Carl's only motive in wanting the code test dropped is to fill his and
his company's bank accounts - the company he works for apparently has
some HF gear on the design board, and he'll $urely profit from the
creation of a code-free HF license.

Did you buy $tock in his company, Gary?

>
>
> WHAT IS C W
>
> * It is a unique,intimate,concise and effective communications skill still
> employed throughout the world.

CW, just to be pedantic for a second, does not convey intelligence unless it
is coded. Morse code is the most common hand transmitted CW code.

> * It is the most efficient mode in terms of power required for long-
> distance communication ,least susecptible to interference,and conserving of
> the radio frequency spectrum.

Not true, unless you also stipulate that it must also be one of the cheapest.

>
> * It involves no accent or pronunciation problems,therefore providing a
> widely understood international language.

This is a common fallacy about Morse code - it is NOT a widely understood
international language - it is not a language at all. It is a basic one for
one represntation of the alphabet and numbers. If you cannot understand
a common voice language, then what most people are relying on is the
abbreviation codes such as the Q-codes. If you think I'm off the mark, then
perhaps you could show how you would communicate to a non-english speaker
that:

"Tomorrow, it will be fine so I'll do my washing. The day after, I will do
the ironing when it is raining."

This is a simple concept in any true language, so the "widely understood
international language" should be able to communicate this easily without
resorting to English.

The writer also tends to overlook the fact the Morse operators also have
"accents" which can impair communications. One could also argue that any
text based comms is free of accent.

> * It employs simpler,more reliable and easily maintained equipment than any
> other communications mode.
>

Most amateurs use commercial equipment which provides the other modes as well.
It is true, however, that if you build the simplist possible transmitter and
receiver, but in many cases, modern communication building blocks allow other

modes for the same relative complexity.

As to being more reliable, this is questionable as the transmitter is being powered up and down continuously. Given the same level of technology, I'd suggest that an FM rig would probably be more reliable as it is keyed less that a CW rig for a comparable contact time.

> * It is an equalizer,negating age,speech impediments and dialectical
> differences;it provides for ready acceptance of youngsters in an adult
> enviornment.

It however, does discriminate against people, especially older people, who have muscular problems which limit their hand coordination. The ready acceptance of youngsters is a bit tenuous, unless the writer is implying that older amateurs are "age-ist". I would hope that that amateurs accept people on their actions, not their perceived voice age. Otherwise, it would tend to indicate that they may discriminate against sending style anyway.

> * It is the ONLY radio communications mode that is understood readily by
> both man and machine.
>

>
> Please note : the above article was submitted for packet by N1CNS as
> a reminder that it is a serious and viable means of communication. Any

>
> .

This comment, I do agree whole-heartedly. CW operation should always have a place in Amateur Radio as long as a single operator whichs to use it. It can be a very enjoyable pursuit to many amateurs. I would certainly resist any move to say that CW (Morse) should not retain its slice of all amateur bands.

>negative when I point out that the ARRL leadership encouraged the
>hams to do something considered very rude? Again, if you don't think
>an e-mail flood is rude, you haven't been there yet. It is a kind of
>terrorism.

I have thought of a mailbombing as an act where one fills up a
victim's mail server with 'data' generated by one person. This was not
a mailbombing at all. The ARRL activity was an e-mail letter writing
campaign consisting of communications of thousands of individual
participants. Not the same thing at all. The ARRL campaign was very
legitimate. It is inflammatory to refer to their act as a mailbombing.
ARRL did not in any way encourage a violation of accepted net usage.

>Furthermore, the committee was deluged with messages that are almost
>certainly content-free as far as they're concerned.

Aw, come on Dana. The important part was the "number" of protests. We
all knew what the protesters were protesting about.

>The only content
>those letters can be expected to have is "don't take away 2m or 70cm" -
>and the IWG group probably isn't planning to take away 2m or 70cm,

>>winning. They did manage to do the best any organization could with
>>the resources they had (basically people (us), and not a lot of
>>money).

>Again, what results have the FCC accomplished? Have 2m and 70cm been
>removed from the candidate list? Why is it time to party?

True, what has been accomplished has yet to be seen. But I suspect the campaign made a *big* difference.

Please re-read the statement you yourself included in the auto-quote, ie, the part where I said "even if we don't end up winning". I did not assume we 'won'. Besides, there would be no reason to 'party' for winning since the gain in accomplishing this objective is still zero. It is very negative if we lose.

You need not respond further and defend your position. Let's just agree to disagree and leave it at that.

2957. Learning/Improving CW Skills

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <01bba134$cc6282c0$82070ccf@jim-reid-1>
Source record: 216961

Aloha from Kauai,

A few days ago, someone posted a question about learning CW.
IMO, the best CW learning tapes are those by Gordon West;
ads in the ham mags nearly monthly and also available from the
W5YI Group which also runs ads, look in CQ magazine. You will
need a stereo cassette player with which you can control the
volume of each channel independantly, as Gordon does coaching/
commenting, etc on one channel while the CW is on the other.

For improving an already semi-learned CW skill, check out my
bit in the present issue of CQ Magazine, pg 92. it is within the
Contest Calendar department by John Dorr, K1AR. In it you
will find several ideas for improving your CW skills.

I hope you learn quickly and come to enjoy the fun of the mode as much
as thousands of the rest of us do about the world. Try listening on 20
meters and compare the number of readable QSO's going on in both
the SSB and CW band areas: above 14150 in the US for SSB, and
between 14000 and 14060 or so for CW. You will be surprised at the
very great number of useable CW signals, especially on weekends
as compared to those really readable in the SSB area. The same
thing is going on, at appropriate prop condition times of the day,
all over the world on all NINE (9) HF amateur bands! There are
hundreds of CW QSO's in progress all the time, and guys and gals
worldwide are enjoying the mode because it is FUN!

By the way, contrary to what you read on many of the amateur radio
newsgroups, CW is alive and well in both the commercial and military
communication systems of the world! For example:

In the Mediterranian Sea, weather info is provided to commercail
ships ONLY by CW by ROMA Radio, IAR, from a coastal station on
Italy.

In the Indian Ocean, weather information is provided to commercial
shipping ONLY by CW from India on both MF and HF frequencies.

The Brit AirForce, the RAF, is still teaching and using CW.
The 13 week course, given at No. 1 Radio School at RAF Locking,
requires 18 wpm skill demonstration to pass. CW is used, world wide
by the RAF in many ground to ground and ground to air circuits,
Falklands, etc.

This past June 28th, the Russian Cruies Liner, Alla Tarasovia, at dawn
that day, with its vaunted GMDSS (Global Marine Distress Satellite
System) apparantly inoperative, had to send out a CW SOS with

position, heading, situation, etc. The CW signal was intercepted by Stonehaven Radio and alerted the Aberdeen Coast Guard. 71 passengers and 68 crew on board were saved from harm as a result of an alert and competent CW operator. The liner, chartered by Toronto based Marine Expeditions, had lost engine, power and was drifting out of control Thank God the RO was still CW competent and so was the watch RO at Stonehaven.

In follow up, BBC TV reported this past July 16th, that the worldwide GMDSS is "in a state of near collapse." The report claimed that about 95 percent of marine distress calls being rcv'd by Coast Guards are false alarms! Falmouth Coast Guard alone recv'd 959 false calls in the previous 12 months. This is being caused by incomplete training of shipboard operators, and a woeful inadequate training to service technicians who are to service and certify the equipment. The training has fallen behind the need, and has proven much more difficult than had been anticipated. Also, the supply of equipment from manufacturers is way behind schedule. Further, the training and supply of Inspectors to monitor the system and to enforce standards is proving almost impossible.

International shipping may just reconsider the situation and decide they had better maintain, on the watch 24 hours, CW competent radio operators on board, and similarly at Coast Guard stations worldwide.

Anyhow, jump on in, and learn and enjoy CW. Who knows, you might also, one day find yourself in a situation where CW just might be the only mode of communictions. By the way have you heard of Morse 2000? This is a program which is teach the Morse code to handicapped individuals who can communicate in no other way. It is a growing program, and is being accepted enthusiastically about the world as a whole NEW way for the handicapped to communicate. Small world, isn't it?

Have fun learning and using CW! You will find none of the nonsense that goes on in the SSB segments on CW: fights over a frequency, discussions of medical problems, symptoms and visits to the MD, DX net operators berating the huddled masses awaiting the precious turn to work the DX, etc. On the CW mode you will meet a lot of people just having fun!

73, Jim, AH6NB

2958. Repeater Question

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC
From: ab5on@juno.COM
Message-ID: <19960912.224049.7663.0.ab5on@juno.com>
Source record: 216962

Here in Oklahoma we in the Ham radio community have recently dealt with 3 emergencies that involved on-site communications that lasted 1 to 2 weeks or longer. Several of us have noted that the 2 meter HT has been the workhorse of this effort. Fortunatly, we have been near repeaters most of the time. The experience has highlighted the fact that outside a metro area the HT would be severly limited. We are looking at a project to build a "generic" repeater controler for emergencies that could use two radios to quickly set up a repeater (no frills) on any freq. Obviously the audio would have to come from a speaker output and end up as a mic level input and the TX switching would have to come from audio detection instead of AGC. Technical details aside, I come to the question of whether anyone knows of such a controller or are we going to have to develop it ourselves?

An e-mail bombing is causing someone's mailbox to receive a
large quantity of e-mail in a short period of time. There's no
difference if one person sends you 1000 messages or 1000 people
send you one message - same result.

The ARRL campaign was instigated by one person and carried out
by perhaps 1,000. It was a mail bombing - something not
considered rude with snail mail but certainly rude in email.

It is in no way inflammatory to call a mail-bombing a mail-bombing.
The ARRL encouraged amateurs to deluge several people's mailboxes
with e-mail. If you don't think that is a bombing, you're not
being realistic.

>>Furthermore, the committee was deluged with messages that are almost
>>certainly content-free as far as they're concerned.
>
>Aw, come on Dana. The important part was the "number" of protests. We
>all knew what the protesters were protesting about.

Wait a minute - are you saying the ARRL wanted to deluge the
e-mail boxes of people with a large "number" of messages?

How exactly does that differ from a mail bombing?

>>The only content
>>those letters can be expected to have is "don't take away 2m or 70cm" -
>>and the IWG group probably isn't planning to take away 2m or 70cm,
>>despite the paranoid speculation to the contrary.
>
>>>Sorry, but I think if everyone had waited for the supposed 'facts' as
>>>you did, the WG would be much closer to annexing 2m than it currently
>>>is today. I think ARRL displayed effective leadership in this case and
>>>obtained the intended results. They have done a lot to redeem their
>>>position as the voice of amateur radio, even if we don't end up
>>>winning. They did manage to do the best any organization could with
>>>the resources they had (basically people (us), and not a lot of
>>>money).
>
>>Again, what results have the FCC accomplished? Have 2m and 70cm been
>>removed from the candidate list? Why is it time to party?
>
>True, what has been accomplished has yet to be seen. But I suspect the
>campaign made a *big* difference.

Oh, I don't doubt the campaign has left a big impression. I just have
doubts the impression was good.

>Please re-read the statement you yourself included in the auto-quote,
>ie, the part where I said "even if we don't end up winning". I did not
>assume we 'won'. Besides, there would be no reason to 'party' for
>winning since the gain in accomplishing this objective is still zero.
>It is very negative if we lose.
>
>You need not respond further and defend your position. Let's just
>agree to disagree and leave it at that.

I don't see this as just a disagreement - I see this as an abuse
of e-mail by the ARRL, something I hope they're not encouraged to

continue in the future.

HURRICANE FREQUENCIES
(Unless otherwise noted, times are UTC, freq in kHz)
Revised September 1, 1996

The following high-frequency hurricane season intercepts have been gleaned from numerous sources. Times and frequencies are subject to frequent change, and are listed for reference only. This list has been published monthly during hurricane season since 1991.

If you copy this list, credit the authors. Do not remove update request and e-mail addresses. This is the only way we can keep the list updated! Thank you all who have so generously contributed information. Enjoy!

Hurricane reconnaissance aircraft (hurricane hunters) now operate primarily

on US Global High Frequency System (GHFS) frequencies. Best frequencies to

monitor are those guarded by MacDill and Ascension. After initial contact
on one of the published GHFS frequencies, listen closely for them to switch

to a non-published frequency to pass traffic. Aircraft call signs are
"GULL-nn" or "TEAL-nn" (where nn is a 2-digit number), "NOAA-42", "NOAA-43
and NOAA-49. The GULL and TEAL aircraft are based at Keesler AFB,
Biloxi, MS. The NOAA aircraft are based at MacDill AFB, Tampa, FL.

Whenever a hurricane is within 300 miles of land in the northern western
hemisphere, the Hurricane Watch Net is operational on 14325. The Hurricane

Watch Net provides communication between the National Hurricane Center and
the affected areas.

During a communications emergency, W1AW transmits special bulletins by
voice at hh:00, teleprinter at hh:15, and CW at hh:30. Frequencies are:
Voice 01855 03990 07290 14290 18160 21390 28590
Teleprinter 03625 07095 14095 18102.5 21095 28095
CW 01818 03581.5 07047.5 14047.5 18097.5 21067.5 28067.5

The National Institute of Standards and Technology broadcasts storm warn-
ings on 2.5, 5, 10, 15 & 20 MHz AM according to the following schedule:
WWV hh:08 Covers Atlantic and eastern North Pacific
WWVH hh:48 Covers Western, Eastern, Southern, and North Pacific

---

Globe Wireless broadcasts weather information, forecasts and bulletins in
CW and SITOR modes on the following time-slot schedule:

2962. The REAL makeup of contesters

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <323934EA.2939@ccsnet.com>
Source record: 216966

What others say:

From: k0hb@hamlink.mn.org (Hans Brakob)

Hi,

With reference to your recent comments about contesters, I thought
of you when I saw the following:

With apologies to Darwin, it's obvious that ham radio has three
distinct classes of people, each with its own evolutionary destiny:

1) Hard core contesters who will evolve into godlike
non-corporal beings who rule the universe (except for those who
work only phone contests).

2) Contester wannabes who try to pass as knowledgeable but secretly
lurk and copy 2 or 3 exchanges to get the call and serial number
before attempting their own exchange. This group will gravitate
toward jobs as high school principals and operators of pet
crematoriums. Eventually they will become extinct.

3) Non-contesters who will grow tails, sit in zoos and fling dung at
tourists, while chanting "Please QSY -- there's a net down 10KC
and it's been there for 40 years."

73, de Hans (Grinning, Ducking, and Running)

2963. What the real RACES is

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <32393556.1963@ccsnet.com>

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

From: WF2R@WA2YSM
To: RACES@NEBBS
Subject: Is it really necessary?

There has been much discussion about ARES/RACES etc on the packet system. One message "crows" about the quality of volunteers in California, another "cackles" about a dispute between RACES and ARES members in TEXAS.To all these people whom are looking to carve their niche in amateur radio by participing in so called emergency communications: you are wasting your time. Emergency communications is already provided by many other groups, including the american red cross. Yes, the ARC was granted use of 220-223 MC by the FCC for their emergency communications use. Their attorney who petitioned the FCC is also the ARRL General Counsel in WASHINGTON DC. Most of the members belonging to these groups ARES/RACES are bored, lonely people with no social ties, the remainder are CONTROL FREAKS, people that want to do ONLY THEIR WAY. Just read the packet messages that come out of California regarding this topic, and judge for yourself. If you are new to this hobby, and somehow you have been corralled into this "we have to provide emergency communications syndrome" you can easily bail out now and avoid agruments, personality clashes etc. Just tell the group leader you are out, you will be better off in the long run.

2964. Hams under stress

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC

Here is the list of stressors, along with their relative weights, from Drs. Thomas H. Holmes and Richard H. Rahe, psychiatrists at the University of Washington Medical School. K1OIK made certain additions:

Event Relative Rating
Talk to an attractive female direct 200
Talk to a female on the air 103
Forced to sell rig 102
Theft of rig 101
Death of spouse 100
Ham takes a bath or shower 100
Antenna falls 100
Try to fix own rig 99
Spouse walks into ham shack 99
Divorce 73
Receiving a packet message 69
Marital separation 65
Jail term 63
Death of close family member 63
Sending a packet message 54
Personal injury or illness 53
Listening to a repeater 52
Marriage 50
Fired at work 47
Marital reconciliation 45
Retirement 45
Change in health of family member 44
Pregnancy 40
Sex difficulties (all hams have this) 39
Gain of new family member 39
Eyeball "QSO" 34
Change in financial state 38
Death of close friend 37
Death of a ham friend 01 (all hams are dead anyway)
Change to different line of work 36
Change in number of arguments w/ spouse 35
Change in number of QSOs 33
Mortgage over $10,000 (!) 31
Foreclosure of mortgage or loan 30
Change in responsibilities at work 29
Son or daughter leaving home 29
Trouble with in-laws 29
Outstanding personal achievement 28

Outstanding ham achievement 67
Wife (spouse) begins or stops work 26
Begin or end school 26
Change in living conditions 25
Revision of personal habits 24
Trouble with boss 23
Trouble with rig 87
Change in work hours or conditions 20
Change in residence 20
Change in schools 20
Change in recreation 19
Change in call sign 99
Change in church activities 19
Change in social activities 18
Mortgage or loan less than $10,000 17
Change in sleeping habits 16
Change in # of family get-togethers 15
Change in code speed 15
Change in eating habits 15
Vacation 13
Christmas 12
Minor violations of the law 11
Receiving a QSL card 09
Ham's child dies 07

Feel free to make additions and I will update the list.

Burt K1OIK.

Yes, I replied to seven folks who sent messages expressing an interest in having my friend and I deliver their 610-Vs along with ours to Pittsburgh. I sent a bulk reply to all seven so you all could know who else was involved in this undertaking. If I were going to entrust MINE to someone else I would certainly want to know who else was involved or I'd probably smell scam!

We want to cover expenses if we go. If not we'll share the resource I mentioned in my private messages to all that replied.

I don't know which navy you're referring to, but...

When I was in the US Navy, my job was to monitor and track foreign vessels.
The Soviets CHANGED CALLSIGNS MONTHLY, ship and shore alike.
I suspect that our navy may do the same, but since I was a "spook" (not a
radioman)
I never got much chance to listen to our own comms.

I'm in the process of designing a similar keyer, but smaller and with fewer parts.
Only one button, not five, so you can install it inside your rig with no fuss.

The design, still beta, is open for personal use:

2969. Need GE Progress Line Rcvr Schematic

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC
From: YoumansB@worldnet.att.net
Message-ID: <51blej$2g0@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 216973

My local repeater club purchased an old GE PRogrees Line receiver to a provide 6M Skywarn backbone audio feed into the repeater. The receiver looks very similar to a model ER-39-C (4ER39C68-85) for which we have a schematic. Unfortunately the receiver must not be that model as the boards and wiring do not agree with the documentation.

The only numbers we can obtain are from the PL board and the AUDIO, SQ, & IF board. The numbers found there are:

PL19D40237G4 REV (ink stamped on board assy)

19C303450 R4 (on PC foil pattern)

We would appreciate any service information any readers might have.

Reply here or send E-mail to YoumansB@worldnet.att.net

Thanks, Barry KB8YSE

2970. Re: Mail vs hand deliv, vanity app?

radio@copland.udel.edu (Robert Penneys) wrote:

>Do you have any knowledge of whether it would be more effective to
>have one's vanity call application hand delivered or express mailed
>to get there on the 23rd?

I spoke with the FCC this morning and they told me that the
applications would be processed together and selected at random rather
than on the basis of their arrival time. It seems that hand delivery
would not be more effective.

Just a quick note to that Carl for his tireless jousting at the radid pro code folks. When I first got my license I was enthusiastic about all aspects of amateur radio including code. The exposure I got on the net to the very rabid pro code folks A.K.A Code Nazis has comptletely changed that.

Now I am solidly against any code test of more than 5 WPM. I think the band plan should be changed to significantly reduce the spectrum reserved for CW particularly in light of the fact that they are free to operate anywhere in the bands.

Rather than wasting my energy "debating" the issue on the net I spend the time I want to devote to this issue working to change things. I suspect that I am not alone but most people would rather not endure the flames and insults that result when you come out against the code.

For the comprehension challenged. I was not against the code when I got into ham radio. The net is the biggest infulence in turning me against the fast code test. For each person willing to write and tell you this many are not. Neither ham radio nor life as we know it on the planet will end if the fast code test does.

Thanks again Carl keep up the good work.

73 Jerry

2972. Vanity Call Sign Filing Procedures Clarified

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <32395F6B.7C1C@arrl.org>
Source record: 216976

FCC NEWS Released: September 12, 1996

WIRELESS TELECOMMUNICATIONS BUREAU CLARIFIES
AMATEUR VANITY CALL SIGN FILING PROCEDURES

Filing Gate 2 will open for Amateur Station Vanity call sign requests on September 23, 1996 (see Public Notice 64756 released August 22, 1996). The Commission's lockbox contractor in Pittsburgh, PA has been inundated with inquiries concerning the filing gate and procedures. All inquiries concerning Amateur Vanity call sign requests and the filing procedures should be directed to the Wireless Telecommunications Bureau's Consumer Assistance Branch in Gettysburg, PA, toll free (800) 322-1117. Do not call the Commission's lockbox contractor in Pittsburgh, PA.

Applications for vanity call sign requests, as well as other types of applications, are processed in receipt date order only, thus the time of delivery within that receipt date has no bearing on the order of processing
within that receipt date. An application filed at 12:01 a.m. has the same
processing priority as an application received at 11:59 p.m. that same day.
Applications will be processed in the order they are received at the processor's work station. The Wireless Telecommunications Bureau requests that you take this into consideration when delivering your applications to Pittsburgh.

Again, any inquiries concerning Amateur Vanity call sign Form 610-V completion or filing procedures should be directed to (800) 322-1117.

2973. New amateur-radio website!!!

Hello!
I'm proud to announce a new web-site enterely dedicated to amateur radio.
The site is maintained by an italian amateur-radio association and there's
a lot of interesting informations.
This is the URL:

http://www.geocities.com/SiliconValley/2551/sezione_eng.htm

or (in italian language)

http://www.geocities.com/SiliconValley/2551/sezione.htm

Enjoy-it!

You'd probably hear at worst a kerchunk and more likely nothing. I believe
these LEO's are planning on operation SS. Their effect would be more of
raising the noise floor. In the FM portions of the our bands, that's probably
not a big deal, but in the weak signal portions, it's a real problem.

Perhaps, although I find trying to address hypothetical ulterior motives
a rather fruitless activity. The likelihood you are correct is low and mostly
all it does is raise people's blood pressure. But hey, feel free to have a go.
If you believe our political clout is enough to fight this without attempting
to cooperate, go for it.

>equipment to keep the remaining part of the band, but it hasn't happened.
>The worst part about it is that UPS is not even using the lower 2 Mhz. I
>never hear anything on there.

I sure do down here. It isn't UPS, but there are users on those lost
2 MHz. Seems to be mostly low speed encrypted data, though I occasionally
pick up FM voice too. The voice signals don't sound like typical land mobile
radio traffic, I'm not sure what they are or who they are.

The remaining amateur part isn't empty either. We've got a 56 kb repeater
in there, and there are several voice repeaters too. They're not as active
as the 2m or 70cm repeaters, but they're there. During drive times in the
mornings and evenings, there are always some repeaters active on the band.

The new equipment situation is rather grim. The manufacturers who geared
up for the expected sales bonanza that was to follow Novice Enhancement
dropped most of the 1.33m equipment from their lines after that proved
to be a bust. And there's little available commercial surplus to convert
for this band. We've been able to get enough Sinclabs transverters for
our data use (Maple Leaf Communications has Sinclabs' remaining stock).
If you're looking for a good HT or mobile rig for voice use on this band,
the pickings are pretty slim. There is a tri-bander or two, and a couple
of HTs.

If I'm not mistaken, 1.33m is available to amateurs only in North
America, so the vast Japanese home market doesn't offer the buffer
it offers for the Japanese manufacturers of 2m and 70cm radios.
It is a low volume specialty market to them, so we haven't seen
as many feature rich radios for this band as we have for the others.
And that's what a lot of hams seem to want.

Of course we can build our own, but there haven't been many construction
articles in the magazines or in the Handbook for this band. It is sadly
true that few amateurs will tackle completely original projects. I did
whip up a transverter design for 29 MHz->219 MHz (or 222 MHz with just a
crystal change and a couple of tweaks). Due to the expected low volume
demand, however, it probably isn't worthwhile to bring it to market as
a kit. I may submit a construction article to one of the magazines to
see if there is any interest in it.

>detailed analysis of the situation; we really have looked at it
>carefully.)

Interference *to* amateurs is one thing, and it may not be a serious
thing for most FM operators, but interference *from* amateur stations
in the satellite footprint is another thing altogether. And that's the
more critical factor for sharing. Over 100,000 sq km will be in the
footprint of a LEO sat at any given time. If the US amateur population
were distributed uniformly across the US, there would be 6,000 amateurs
in the satellite's footprint at any given time. If all of them were
on the 500 FM 2m channels at once, every channel would have 12 signals
being received by the satellite. (Obviously this is worst case, and
will be derated below.)

Unlike the low power mobile satellite Earth stations of the little LEO
system, many of these amateur systems will be running 45 watts, IE
mobile/base stations. If we assume that half are such stations and
the other half are HTs, then there will be 300 watts per channel in
the satellite footprint, or 150,000 watts in the satellite receiver's
front end passband. (Of course we need to factor in ERP and path loss
to get the actual received power, which will be tiny, but the desired
little LEO Earth terminals' signals will be tinier still at the satellite's
receiver.)

Of course all those amateurs aren't transmitting at once. But the
area is sufficiently large that frequency reuse will be occurring,
IE *someone* in the footprint will likely be using a channel at
any given time though all users of that channel may not be transmitting

at once. If we follow the 10% rule, there's still a good likelyhood
that there will be 6 db more amateur signal on every channel of the
satellite's receiver than there will be little LEO Earth terminal
signal, at least part of the time.

The little LEOs may listen before transmitting, but the Earth
terminals can't hear the other stations in the satellite footprint
who may be using the channel they have selected (the classic hidden
terminal problem on a grand scale). And while the little LEO systems
may listen before transmitting, the amateur systems will *not*, so
collisions remain at the pure Aloha level. And the amateur signals
will almost always *win* the collision, so even the 18% throughput
allowed in pure Aloha won't be achieved by the little LEOs (the classic
exposed terminal problem). If we believe the 6 db figure above,
throughput will be 0% for the little LEO system quite frequently.

Of course amateurs aren't really distributed uniformly across the
US. They cluster in the top 300 metropolitan statistical areas for
the most part. And of course not all US amateurs will be active on
2m at once either. This should allow *some* throughput for the little
LEO systems *some* of the time, but I wouldn't expect much. What odds
would you give that the little LEO would have *any* throughput while
the Dayton Hamvention is in its footprint?

>><snip>
>
>Actually, I suspect that the parameters for a world-class moonbounce
>station will raise a few eyebrows. :-)

And that might be used to leverage even more burdensome RF radiation
limits on amateurs. Perhaps something as extreme as setting the amateur
power limit to 50 watts period instead of just setting that as the
threshold where an environmental evaluation is required. This is dangerous
ground to be treading at this time.

>I wouldn't discount the value of
>a technical analysis of the sharing potential. Coupled with the
>demographics, showing the extent of current occupancy, it forms a pretty
>persuasive argument that they need to look elsewhere. Remember, the
>amateur frequencies are only one of a large group of bands they are

>frequency-allocation decisions will consider the technical aspects of
>sharing. One thing we can usually say about our regulators; they are not
>apt to make decisions that will ultimately result in more work for
>themselves. Deciding to permit a technically unworkable sharing
>situation would NOT lessen their workload.

One would hope that were true, but given the tenor of the remarks
on the record so far by the working group's chairman, I'm not
convinced that is the case here. Of course I realize that the
committee isn't the final word in this process, but it will carry
a lot of weight with the real decisionmakers, who are politicians

first and engineers second (if at all, most are lawyers with little or no engineering training). Remember that this decision isn't a FCC decision. They have input, but the State Dept is the major player. We have a few good friends at the FCC, but to the State Dept we are non-entities.

An old adage of politics is that to understand it you must follow the money. There are major dollar signs in the eyes of everyone touched by the little LEOs. That's particularly true of the Beltway Bandits on the committee, and also true of bureaucrats who see a chance to make powerful friends who will give them leverage with their political masters. There're practically none when the subject is amateurs.

Even a back of the envelope analysis shows that amateurs would have a severe impact on the little LEO systems, as would attempts to share land mobile spectrum. The little LEO proponents *have* to know this. Yet they put forward amateurs as potential "sharing" partners. Thus "sharing" has to be just a strawman, a way to get their foot in the door so they can come back later and demand primary status on these amateur bands, if not exclusive status on these amateur bands. They know they haven't a prayer of getting that on land mobile spectrum, the users of that spectrum are too well politically connected, but they may think they can muscle their way onto the amateur spectrum because amateurs are perceived as being politically weak.

That's why I think Dave Sumner's mail bomb was the appropriate course. It may have shown some of these folks that amateurs aren't as politically vulnerable as they may have thought. In fact they can be a big PITA when they are aroused. If there's anything a bureaucrat hates, it is stirring up the voters in their political masters' districts. That can have a direct effect on their job security and career advancement, IE the committee chairman may find himself gathering first hand counts of wild yaks in Upper Slobovia if his masters become annoyed by the hornet's nest he has allowed to be stirred.

The ARRL Letter
Vol. 15, No. 9
September 13, 1996

IN THIS EDITION:

* League petitions FCC to change RF safety rules
* ARRL membership hits all-time high
* FCC puts test electronic vanithy filing site on Web
* FCC clarifies vanity filing procedures
* Atlantis set for SAREX mission
* FCC levies $6000 fine for interference
* Ham radio goes Hollywood--again
* UNAMSAT-B in orbit
* 1996 FAR scholarship winners
* In Brief: Director Vydareny resigns; Balloon launch; National Amateur Radio Exam Days; Goldwater suffers stroke; K1AR leaves CQ; New Hong Kong ham radio prefixes.

LEAGUE PETITIONS FCC TO CHANGE NEW RF SAFETY RULES

The ARRL has petitioned the FCC to reconsider and reverse portions of the Commission's August 1, 1996, Report and Order that imposed RF-emission safety standards on Amateur Radio, including a 50-W threshold to trigger an RF-safety evaluation. In setting the 50-W threshold, the ARRL said, the FCC failed to consider the effect of antenna height, antenna gain, emission mode, duty cycle or operating frequency. The League asked the FCC either to scale the evaluation threshold by frequency to match the maximum permissible exposure (MPE) limits--directly corresponding to the way the regulations scale the exposure levels with frequency--or to set the evaluation threshold for all HF operation at 150 W at a distance of 10 meters from all parts of the antenna.

At or below that power level and at that distance from the radiator, "you'd be well on the side of safe, even at 100% duty cycle, with any antenna likely to be encountered on HF," said ARRL Laboratory Supervisor Ed Hare, KA1CV, our HQ staff liaison to the ARRL RF Safety Committee. "Some VHF/UHF and microwave station configurations could result in an RF exposure exceeding the requirements of the regulations, so the 50-W limit to trigger an evaluation is more appropriate above 30 MHz," said Hare. The ARRL Laboratory staff is working on a QST article that explains the new RF-safety regulations. "The article will tell hams how to evaluate their stations to

be in compliance with the new rules," Hare explained.

Hare also emphasized that all stations, regardless of output power or frequency, still must abide by the specified MPE limits for RF. "Even my 10-mW HF station has to be in compliance with the MPE limits. At that power level, even under the existing rules, I don't have to evaluate whether it is compliance, however; it is presumed that stations running less than 50 W PEP are in compliance."

The new rules, effective January 1, 1997, require licensees of amateur stations running 50 W output or more on any band to conduct a routine RF-safety evaluation to determine if the station could expose people to RF levels that exceed the MPE limits specified in the new rules. (Mobile installations using push-to-talk, regardless of power, are exempt from the environmental evaluation requirement.) In its reconsideration filing, the League called the 50-W threshold "regulatory overkill" and "without scientific basis." Among other things, the League said the means to conduct RF radiation evaluations are not yet available, and the ability to reconfigure a station that might exceed the new limits "is highly problematic." Coupled with any state and local land-use and RF-exposure regulations that might exist, application of the new rules "may constitute a de facto revocation or modification of the station license," the League said.

"If amateurs cannot operate using outdoor antennas due to deed restrictions, and they cannot use indoor antennas due to concern about exceeding the MPE levels, all amateur communications are precluded."

In addition, the ARRL contends that rules imposed in the Commission's Report and Order "were adopted through flawed procedures." The League said the FCC adopted the rules without advance notice and opportunity for prior comment by those who would be most affected. "Neither the League, nor radio amateurs generally, had any opportunity to comment on, or suggest alternatives to, the rules adopted by the Commission," the ARRL petition said. "The Commission cannot impose substantive rule changes without adequate notice."

The ARRL said that the new rules differentiate between ham stations and other Commission licensees, "which are treated far less restrictively." While the FCC preempted state and local government regulation of personal wireless service facilities based on environmental effects of RF emissions, it refused to do the same for ham radio "without any basis for the distinction."

The League's petition also said the rules in the Report and Order "contain substantive obligations" that affect both individual hams and the preparation of ham radio examinations. The ARRL already has asked the FCC to extend the deadline to change amateur examinations and modify question pools, but the Commission has yet to act on the request. "The Commission failed to address the impact on radio amateurs, amateur groups, or publishers of Amateur Radio examination preparation materials" the League said. Noting that the FCC has not yet issued revised documents to assist Amateur Radio licensees in determining MPE compliance, the League said that,

as it now stands, hams have no way to determine the scope of their obligations under the new rules.

The League suggested the FCC vacate its new RF safety rules governing amateur stations and issue a further notice to permit comment on the proposed rules, and, in particular, the 50-W threshold. Hare said the League's proposed HF threshold of 150-W at 10 meters distance from the antenna "encompasses a much greater range of typical Amateur Radio operation without compromising safety."

According to the September 9, 1996, issue of Radio Communications Report, the ARRL was not the only one to challenge the RF exposure guidelines. Others filing petitions for reconsideration or clarification are the Personal Communications Industry Association, the Electromagnetic Energy Association, Hammett & Edison Inc (a consulting firm) and the US Department of Defense.

ARRL MEMBERSHIP IS AT AN ALL-TIME HIGH

Good news as the 1996 ARRL National Convention gets under way in Peoria, Illinois, this weekend: ARRL membership hit an all-time record of 173,491 members in August. The previous all-time high of 172,752 was reached in March 1995, just before a small dues increase took effect that caused a slight decline.

Especially over the past two months, radio amateurs have been joining the ARRL in large numbers to express their support for the League's efforts to defend Amateur Radio frequency allocations against commercial encroachment. In a typical month, about 1500 people join the ARRL for the first time. During July and August 1996, the figures were 2461 and 1988 respectively.

ARRL Executive Vice President David Sumner, K1ZZ, was encouraged by the membership trend and hopes it will continue. "In this uncertain period, when more and more of the radio spectrum is being offered to the highest bidder, amateurs recognize that we have to stick together. The ARRL is the best glue we have," he commented.

FCC PUTS TEST ELECTRONIC VANITY FILING SITE ON THE WEB

This is only a test! In preparation for an expected onslaught of Gate 2, 3 and 4 vanity call sign applications, the FCC has made available a test version of the electronic Amateur Station Vanity Call Sign Request form, Form 610V. The electronic test form is available on the World Wide Web at http://www.fcc.gov/wtb/amradsrv.html (click on Interactive Beta Test Server to access the form). Detailed filing instructions are available by clicking on the item number on the Internet form. The FCC plans to run the Internet electronic filing test for approximately one week, so prospective electronic filers can get a feel for the process and comment on the form. At that point, the FCC is expected to issue another public notice saying when the the electronic Amateur Station Vanity Call Sign Request form will be put on line for real (check W1AW bulletins and the ARRLWeb page for late-breaking information). Send written comments and suggestions regarding electronic filing to the Wireless Telecommunications Bureau to webmail@fcc.gov.

Over the next few months, the Wireless Telecommunications Bureau intends to allow applicants for all services to submit their applications over the Internet. For technical assistance, contact the FCC Technical Support Group at 202-414-1250. For general questions regarding the application, call the Wireless Telecommunications Bureau, Consumer Assistance staff at 800-322-1117.--FCC

FCC CLARIFIES VANITY FILING PROCEDURES

With vanity call sign Gate 2 set to open September 23, the FCC is asking hams to direct all inquiries concerning amateur vanity call sign requests and filing procedures to the Wireless Telecommunications Bureau's Consumer Assistance Branch in Gettysburg, Pennsylvania (800-322-1117). Do not call the Commission's lockbox contractor in Pittsburgh, Pennsylvania.

The Bureau also notes that vanity call sign requests--as well as other application types--are processed in receipt date order only. The time of delivery within a given receipt date has no bearing on the order of processing on that day. An application filed at 12:01 AM has the same processing priority as an application received at 11:59 PM that same day. Applications will be processed in the order received at the processor's work station. The Bureau suggests taking this into consideration when delivering applications to Pittsburgh. (As vanity call sign gates open, no grants will occur until all first-day applications have been received, no matter the manner of delivery--Ed.)--FCC

ATLANTIS SET FOR SAREX MISSION

The space shuttle Atlantis is poised for a September 16 launch after being returned to the launch pad following the threat of Hurricane Fran to central Florida. Atlantis had been moved off the pad and into the nearby vehicle assembly building as a precaution, due to the approach of the storm. NASA managers say the launch window opens at about 0854 UTC for mission STS-79, which will carry the Shuttle Amateur Radio EXperiment, or SAREX.

Three hams will be aboard Atlantis for STS-79: Jay Apt, N5QWL, Carl Walz, KC5TIE, and John Blaha, KC5TZQ. Prearranged ham radio contacts are scheduled with schools in Kansas, Ohio, and England, and with family and friends of the crew. The astronauts will also make random contacts with the amateur community as their busy schedules permit.

During the flight, the shuttle will rendezvous and dock with the Russian space station Mir, ferrying supplies, personnel, and scientific equipment to the complex 240 miles above Earth. Blaha will switch places with astronaut Shannon Lucid, who has been aboard Mir since March.

Additional SAREX information can be found on the ARRLWeb SAREX page, http://www.arrl.org/sarex/.

FCC FINES ARIZONA MAN FOR VIOLATING AMATEUR RULES

One of the more egregious cases of malicious interference to Amateur Radio has apparently ended in Arizona, thanks to a determined effort by amateur volunteers and a little intervention from First Lady Hillary Rodham Clinton

and several members of Congress. On August 30, the FCC fined Timothy Harold Hoffman of Phoenix, Arizona, $6000 for willful violations of various Federal laws last spring. But the headaches did not begin then. Lance Halle, KC7FVX, reports Phoenix repeaters have been plagued for approximately four years by "vile, malicious interference" from an individual posing as a ham and expropriating call signs to use on the air. The problems included interference with ham radio nets and phone patches. Halle said the Arizona Repeater Association's local interference committee had tracked down and identified the guilty party two years earlier and notified the FCC, which caught him "singing vulgar lyrics over a swap net" and issued a Notice of Violation, but not fined.

As Halle explained, "That stopped him for a couple of months, but he soon was back, worse than ever" and thumbing his nose at the FCC. The committee kept documenting his activities and began keeping the ARRL in the loop. After a year of "no action," the club began a letter-writing campaign to the Congress and the White House. Last month, Halle got a letter from FCC Compliance and Information Bureau Chief Beverly G. Baker that began, "First Lady Hillary Rodham Clinton has asked me to respond to your inquiry." Halle says he also heard from three members of Congress who also got similar letters from the FCC.

"It seems the system does work, but needs a little help from Congress at times," Halle observed after the FCC issued the $6000 fine to Hoffman. Halle said he hopes future malicious interference cases get more prompt attention as a result of this case.

According to an FCC Further Notice of Apparent Liability, agents from the FCC's Douglas, Arizona, field office using mobile direction-finding equipment last May 14 detected LSB signals on CB channel 36 (27.365 MHz) coming from Hoffman's residence. The transmissions consisted of retransmitted signals from a ham radio repeater on 147.24 MHz, in contravention of federal regulations that prohibit one-way transmissions and transmission of "material to amuse or entertain." The following evening, agents tracked signals on 146.34 MHz, a common 2-meter repeater input frequency, to Hoffman's residence. The operator was using a false Amateur Radio call sign. FCC agents attempted to inspect the radio station, but Hoffman did not allow them to, nor would he confirm or deny the radio operation. However, the FCC says the transmissions stopped after the attempted inspection.

After issuing an Official Notice of Violation to Hoffman in June (which cited five specific violations, including transmitting on ham frequencies without a valid operator or station authorization, and willfully and maliciously interfering with ham radio communications), Hoffman admitted responsibility for the violations. At that point, the FCC notified Hoffman that he faces a $6000 fine.

"The real credit goes to the volunteers of the Amateur Auxiliary, who did the legwork and follow-up to make it happen," said ARRL Field Services Department Manager Rick Palm, K1CE. "They never gave up and are now entitled to bask in the sunshine of this FCC action. Our hats are off to our League

volunteers for a job well done in the face of daunting challenges."

MORE HAM RADIO ON THE SILVER SCREEN!

Ham radio has another movie role on the horizon, in the Warner Bros movie Contact (based on Carl Sagan's 1985 novel of the same name), due out next summer. ARRL HQ staffers have worked with a representative of the movie maker to provide authentic Amateur Radio props. Contact will star Jodie Foster, James Woods and Matthew McConaughey. Foster will play Ellie Arroway, who, as a girl, got her ham ticket along with her father in the late 1960s, then goes on to become a radio astronomer and the first person to decipher a message received on Earth from extraterrestrial intelligent life. Eventually, she's among the team sent into space to explore the message's origin. Robert Zemeckis will direct the film.

ARRL Media Relations Assistant Jennifer Gagne, N1TDY, provided the filmmakers with an ARRL map (thanks to Circulation Manager Deb Jahnke) and other League publications of the 1960s, Executive Vice President David Sumner supplied some vintage QSLs from his own collection, and Educational Activities Department Manager Rosalie White, WA1STO, advised the Warner Bros contact about types of antennas and equipment they'd need to make the movie set realistic. She also sent an appropriate copy of The ARRL Handbook (donated by Mike Tracy, KC1SX) and several late '60s QSTs. ARRL Southwestern Division Director Fried Heyn, WA6WZO, was to assist the film company in obtaining appropriate 1960s-vintage ham equipment. Also, Dave Newkirk, W9VES, contributed a 1971 copy of The ARRL Handbook as well as his historical expertise.

Filming for Contact begins this fall. Ham radio played roles in the current films Independence Day and Phenomenon. League staff members also helped to supply some props used in the latter film.

UNAMSAT-B IN ORBIT

UNAMSAT-B, the first Mexican Amateur Radio satellite, has been launched into orbit from Plesetsk, Russia. The successful launch on September 5, 1996, follows years of postponements and disappointments, including the destruction of UNAMSAT-1. The satellite was built at the Autonomous University of Mexico under the tutelage of David Liberman, XE1TU.

UNAMSAT-B functions as a 1200-baud store-and-forward packet file server similar to OSCARs 16 and 19.

Uplinks: 145.815, 145.835, 145.855 and 145.875 MHz; downlink: 437.206 MHz.

In addition to its packet capability, UNAMSAT carries a meteor experiment. The satellite will transmit pulses on 40.997 MHz to detect the presence of meteors entering Earth's atmosphere. By analyzing the data files, which will be made available on the server, hams can get a glimpse of meteor activity over various parts of the globe at specific times.

Reports indicate the satellite is sending strong signals back to Earth. AMSAT says a first look at telemetry from UNAMSAT indicates all is working

well aboard the satellite.

Congratulations to the UNAMSAT team at the National Autonomous University of Mexico! For more information, see their Web page at http://serpiente.dgsca.unam.mx/unamsat/unameng.htm.

FOUNDATION FOR AMATEUR RADIO 1996 SCHOLARSHIP WINNERS

Our congratulations and best wishes to these Foundation for Amateur Radio 1996 scholarship winners:

John W. Gore Memorial Scholarship ($1250): Tony Drake, KC4OBY, Bradenton, Florida

Edwin S. Van Deusen Memorial Scholarship ($1250): Jason W. Nelson, N8XEF, Maysville, West Virginia

QCWA Memorial Scholarships: Max Jacobson-John Kelleher Family Scholarship ($1100), Ethan Handwerker, N1SOH, Lexington, Massachusetts; QCWA Memorial Scholarships ($700): Jeffrey Gallant, N2HNY, Monsey, New York; QCWA Leo Meyerson Family Living Scholarship; Adam P. Lekach, N2VEG, Oakhurst, New Jersey, Ralph Hasslinger Charter Member Memorial Scholarship; Terrell R. Clark, KB0JHU, Hopkins, Minnesota; Nathan P. Jeffries, KI7QT, Spokane, Washington; LeAnn S. Kessler, N9ZYJ, Anna, Illinois; Anthony L. Long, KC6QHP, San Diego, California; Joanne C. Peca, N3JFB, Williamsburg, Pennsylvania; April D. Rodgers, N3PPU, Butler, Pennsylvania; James Sikorski, N3PBH, Wapwallopen, Pennsylvania; John M. Steenis, KI7LX, Phoenix, Arizona; Seth A. Strayer, N8YOH, Bellevue, Ohio; David Swaney, N3KCS, Mifflinburg, Pennsylvania; Sarah A. Tobin, N0KGY, Jamestown, North Dakota.

Radio Club of America Scholarships ($750): from the Grant-in-Aid Fund, Grant P. Kesselring, N0ICI, Ottumwa, Iowa; from the Poppele Fund, Zachary D. Sadecki, KB7FUV, Ashton, Idaho; Scott A. Zastoupil, KB0KFX, Williston, North Dakota; from the Grebe Fund, Kenneth N. Warren, AD4OS, West Lafayette, Indiana.

Richard G. Chichester Memorial Scholarship ($1000), sponsored by Patricia and Jack (W9AMF) Chichester: Roland A. Flores, AB5KG, San Antonio, Texas.

Young Ladies' Radio Relay League Scholarship ($1200): Patricia L. Pelczar, KA1TPM, Rocky Hill, Connecticut.

Columbia Amateur Radio Association Scholarship ($1000): Amy Chadwick, KA3TMI, Kensington, Maryland.

Baltimore Amateur Radio Club Scholarships ($1000): Edward J. Calhoon, N3GJI, Arnold, Maryland; Andrew M. Leeds, N3MCB, Finksburg, Maryland; Nicholas P. Schaub, KE3HV, Baltimore, Maryland; Franklin L. Wright, N3OQB, Silver Spring, Maryland; Paige E. Forrest, KE3UB, Baltimore, Maryland (Ernie Dobos Memorial Scholarship).

Ralph V. "Andy" Anderson, K0NL, Memorial Scholarship ($1000): Suzanne L. Chimel, KC3GG, Clark's Summit, Pennsylvania.

Dade Radio Club Tropical Hamboree Scholarships ($1000): Matthew D. Shannon, KF4AKL, Melbourne, Florida; Chris B. Wilson, KD4RHJ, Gainesville, Florida.

Rose Ellen Bills Memorial Scholarship ($2000): Taras B. Zima, KD6VWQ, Reno, Nevada.

Victor C. Clark, W4KFC, Memorial Scholarship ($1000), sponsored by the Vienna Wireless Society: Lawrence Baugh, AD4FX, Stafford, Virginia.

Frederick Amateur Radio Club Scholarship ($1000): Mark W. Lazzaro, N3BVW, Mt Airy, Maryland.

10-10 International Net Scholarships ($1000): David A. Case, KA1NCN, Hampton, Connecticut; Joanna Gallant, KB2EJP, Monsey, New York; Jason Handwerker, N1UEQ, Lexington, Massachusetts.

Free State Amateur Radio Scholarship ($1000): Dana L. Eshelman, WS3L, Ft Washington, Maryland.

WARAC Memorial Scholarships ($1000), sponsored by the West Allis Radio Amateur Club: Christopher D. Molek, KB9GTK, Richland Center, Wisconsin; Karl J. Mueller, N9NFQ, West Allis, Wisconsin; Amy L. Tlachac, N9TLN, Wisconsin Rapids, Wisconsin.

Kevin Barry Perdue Memorial Scholarship ($1000), sponsored by Kay (WT3P) and Carter (KD3AO) Craigie: Michelle G. Pettus, KC4FBE, Lineville, Alabama.

South Milwaukee Amateur Radio Club Scholarships ($500): Brian J. Brechlin, KB9JFP, Waukesha, Wisconsin; Michael D. Kaun, N9RNC, Menomonie, Wisconsin; Raymond G. Meyer, N9PBY, Port Washington, Wisconsin; Steven D. Miller, KB9DFE, Spooner, Wisconsin.

Nanticoke Amateur Radio Club Scholarship ($1000): Darla L. Dilks, KB2LJX, Culpeper, Virginia.

Murgas Amateur Radio Club Scholarship ($500): Shawna M. Lutton, KB3AOG, Ridgway, Pennsylvania.

Virginia Beach Hamfest Scholarships ($750): Victoria L. Crawford, N4XDR, Virginia Beach, Virginia; Matthew P. Ipock, KM4WZ, Chesapeake, Virginia; Christopher Schaab, KD4NFW, Virginia Beach, Virginia.

Martin County ARA Scholarship ($1000): Wendy Joy Silverman, KC4ZQW, Spring Hill, Florida.

Redington-Grenfell Memorial Scholarship ($500): John M. R. Rask, KJ5LM, Taylor Lake Village, Texas.

Baltimore Radio Amateur TV Society Scholarship ($1000): Shaun E. Lewy, N3SWB, Randallstown, Maryland.

Beatrice Chapman, K1OKC, Family Memorial Scholarship ($500), sponsored by the Augusta Amateur Radio Association: Donald G. Trask, N1TZR, Augusta, Maine.

Robert E. True Memorial Scholarship ($1000), sponsored by Mrs Shirley True Banning: Aaron D. Hohenbrink, AA8MH, Hamler, Ohio.

In Brief:

* Director Vydareny resigns: ARRL Hudson Division Director Paul Vydareny, WB2VUK, has resigned, effective September 5, 1996. Vydareny cited job and church obligations as preventing him from doing what he considers a proper job of fulfilling his duties as director. Under the provisions of Article 7, Vice Director Richard Sandell, WK6R, of Scarsdale, New York, becomes director for the remainder of the term, which expires January 1, 1997. Sandell, 58, was appointed vice director of the Hudson Division last April to fill the seat left vacant when Stephen Mendelsohn, WA2DHF, was elected first vice president and Vydareny--then Hudson Division vice director and Eastern New York section manager--succeeded Mendelsohn as division director. Sandell is an ARRL life member and a past Hudson Division assistant director. He is president and CEO of Aura Technology Corporation. His wife, Phyllis, is KD2OG. The couple's three daughters, Alyssa, Karyn and Sylvie, also hold ham tickets.

* Balloon launch: New Augusta Public Academy in Indiana will launch a balloon carrying ham radio FM, packet and ATV equipment on September 21. The package will include a crossband repeater, as well as GPS packet and ATV. The balloon is expected to reach an altitude of 100,000 feet; the flight--a "satellite simulation," according to its sponsors--will last up to three hours. The launch window is set for 1200-1300 UTC. The launch site is five miles northwest of Indianapolis. Pre-launch nets on 3870 kHz and 146.97/repeater start at 1130 UTC on launch day. For details, contact Chuck Crist, e-mail mai@iquest.net; tel 317-787-6674, or set your browser to http://klingon.cs.iupui.edu/~pacer/new_augusta/windtrax.html on the World Wide Web.

* National Amateur Radio Exam Days: Many clubs will offer ham radio exams on September 28 and 29 this year. If your club would like to participate, contact Media Relations Assistant Jennifer Gagne, N1TDY, e-mail jgagne@arrl.org or call 860-594-0328.

* Goldwater suffers stroke: Former US Senator Barry M Goldwater, K7UGA, of Scottsdale, Arizona, was undergoing tests in a Phoenix hospital this past week after suffering a stroke. A spokesman said Goldwater, 87, suffered a minor stroke September 9. Family members said he was "resting comfortably." Goldwater, author of the book "Conscience of a Conservative," ran for President against Democrat Lyndon Johnson in 1964.

* K1AR leaves CQ: John Dorr, K1AR, has stepped down as general manager of CQ magazine. On September 16, he joins Cerulean Technology, Marlboro, Massachusetts, as product marketing director for the company, owned by Ken Wolff, K1EA. Dorr had been with CQ for four years. He will continue to edit the magazine's Contest Calendar.

* New Hong Kong ham radio prefixes: Hams in Hong Kong will be allowed to use several prefixes to commemorate the transfer of sovereignty over the

territory from the United Kingdom to the People's Republic of China on July 1, 1997. At the request of the Hong Kong Amateur Radio Transmitting Society (HARTS), Hong Kong amateurs will be allowed to change the numeral in their call sign to 96 during 1996, to 97 during 1997, and to 98 during 1998. Amateurs began to use these new prefixes on September 10, 1996, starting with a contact between VS96BG and VR96GO. HARTS will announce later the details of a new award to be offered to amateurs for contacting stations using these special prefixes. All Hong Kong amateurs have held licenses with call signs using the prefix VR2 for several years now, although those previously holding VS6 calls are allowed to continue to use the VS prefix before July 1, 1997. The VRA-VRZ block allocated by the ITU to the UK will be transferred to the PRC at that time. The only other use of that block by amateurs at present is in Pitcairn Island, where VR6 calls are still in use. For more information, contact HARTS President Brett Graham, VR96BG, at vr2bg@harts.org.hk.--Brett Graham, VR96BG

Hi,
I am looking for a schematic/service manual for a Microwave
modules MMT 144/28 transverter. I recently had to sell my
primary VHF/UHF allmode and need to repair the xverter
to get back on. I would be happy to pay for reproduction
and shipping costs. Please E-mail chastain@compunet.net

Thanks, Rod. (KD0XX)

As long as CW is *allowed* (!) won't there always be other folks like yourself -- interested in homebrew CW? I mean, people spend beaucoup bucks to fly in balloons still! And ticket prices on steam railroads keep going up. There will always be an England and, whatever the FCC decides, I think there will always be CW

2983. QRZ callsign database -- county error

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC
From: rohrwerk@pconline.com
Message-ID: <rohrwerk-1309961332030001@tsa-p8.pconline.com>
Source record: 216987

I just got a lead that my county listing in the QRZ callsign database was incorrect, so I went and checked it, and sure enough it was one county off.

They say that you can't change any info except your e-mail address without refiling a form 610, because their info is based on the FCC database. Well, that doesn't sound right, 1) because I'm sure I would have put it on my form correctly, and 2) the FCC database, as viewed on the U. Ark. Little Rock web site, doesn't contain county information. I conclude that they are using some other service to deduce counties and lat/long from zip codes or something, and that the error was here.

I wrote them, of course, but wanted to alert folks who may be concerned.

I checked the Buckmaster database in addition, and it was correct there -- they even added grid square location. They had a complete form to fill out to correct ANY information field.

Any correlating experience?

SB PROP ARL ARLP038
ARLP038 Propagation de KT7H

Solar activity was down last week, with the sunspot numbers below
the 90 day average of 71 on every day. Solar flux was down an
average of over 4 and sunspot numbers down an average of 11
compared to the week previous. September 10 was a disturbed day,
with an A index of 25 and the K index as high as 5 over several
periods.

Look for solar flux to peak around the mid-seventies from September
23 to 25. Disturbed or stormy conditions are forecast around
September 26. Current unsettled geomagnetic conditions are
expected to quiet down from September 14 to 20.

Sunspot Numbers for September 5 through 11 were 0, 0, 15, 15, 0, 0
and 0, with a mean of 4.3. 10.7 cm flux was 70.3, 69.7, 69.5,
68.2, 67.9, 68, and 67.6, with a mean of 68.7.

The fact is, Jim, that your ten year old radio is likely to be a whole lot better
for 9600bd than most new "9600bd ready" radios.

Rod.

2992. Minimize chip Count (PAL/GAL Programming SVC)

Newsgroup: rec.radio.amateur.misc

From: dthimm@unix.newnorth.net
Message-ID: <51a4ha$ahe@unix.newnorth.net>
Source record: 216996

NOW YOU CAN HAVE THEM TOO!

Discrete TTL/CMOS technology is old fashioned and cost you lots in terms of space and power.

The software and equipment needed to program your own PAL/GAL chips can cost in the thousands.

PAL/GAL technology can reduce chip count up to 90% and in many cases are faster than TTL/CMOS technology.

This saves you time, money and board space.

If you can describe it and it can be programmed, We can program it.

Custom logic chips are a lot cheaper than you think.

We specialize in providing quality fast turnaround to individuals, students, hobbiests, companys -- whatever the situation.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z SEPTEMBER 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 13 SEPTEMBER AND FORECAST FOR 14 SEPTEMBER - 16 SEPTEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 67/0

GOES satellite data for 12 Sep
Daily Proton Fluence >1 MeV: 4.1E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.8E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Sep 15 Sep 16 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Sep: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 12 Sep
Learmonth 11 3223 2233
Fredericksburg 14 25
Planetary 13 21

Observed Kp for 12 Sep: 4443 3323

2B. MAGNETIC FORECAST
Date Ap Conditions
14 Sep 8 Quiet to unsettled
15 Sep 5 Quiet
16 Sep 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
13 Sep Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
14 Sep Normal Normal Normal
15 Sep Normal Normal Normal
16 Sep Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
13 Sep 2

Observed Australian Regional MUFs:
Darwin: 15-30% depressed for the period 0700-1400UT,
otherwise near predicted monthly values.
Townsville: Near predicted monthly values.
Sydney: Near predicted monthly values.
Hobart: Near predicted monthly values.

Predicted Monthly T index for September: 9

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
14 Sep 5 near predicted monthly values
15 Sep 7 near predicted monthly values
16 Sep 7 near predicted monthly values

2996. ****QUICK AND EASY CASH****

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-13 00:00:00 UTC
From: elrata@dtdsi.com
Message-ID: <5cc_9609131456@dtdsi.com>
Source record: 217000

* Copied from: ALT.ROCK-N-ROLL.METAL
Subject: ****QUICK AND EASY CASH****

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe an tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail' for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups you can. Then sit back

and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the mostdetailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

STEP 1. Write your name and address on 5 separate pieces of paper with the words "PLEASE ADD ME TO YOUR MAILING LIST". For a neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time! Fold a $1 note or money order or bank draft in each of the pieces of paper and mail them to the following five addresses:

```
**********************************************************
* 1. Michael W. Graham
* 7342 146th St. SW Apt. C
* Tacoma, WA 98439
*
* 2. Dave Alexus
* 918 Sunridge Dr.
* Sarasota, FL 34234
*
* 3. Greg Farries
* 119 Mount Crandell Crescent West
* Lethbridge, Alberta
* Canada T1K 6L7
*
* 4. John Wise
* 2130 Cameron Cir.
* Birmingham, AL 35242-6411
*
* 5. Alejandro Pelaez
* Rafaela 5171 Dto. B
* (1407) - Capital Federal
* Argentina
**********************************************************************
```

STEP 2. Now remove the 1st name on the list, move the other 4 names up (5 becomes 4, 4 becomes 3 etc) and put your name and address as number 5 on the list. You can do this by re-typing this article or simply editing and re-posting it in this or another newsgroup.

STEP 3. Post your amended article to at least 200 new groups (there are 17 000 of them).

You are now in the Mail Order Investment Business and you will start receiving $1 returns by mail within a week or two. The more newsgroups you post to, the bigger your return will be.

HOW THE SYSTEM WORKS

Of every 200 postings I made, I received an average of 5 replies, YES - ONLY 5, each with a $1 bill enclosed. You make $5 for every 200 postings WITH YOUR NAME AT NUMBER 5.

Each person who sent you $1, now also makes let's say, only 200 additional postings WITH YOUR NAME AT NUMBER 4, i.e. 1000 postings. On average therefore, 25 people will send you $1 with your name at number 4. You make $25.

Your 25 new agents make 200 posting each WITH YOUR NAME AT NUMBER 3 or 5 000 postings - average return 125 at $1 each is $125. They make 200 postings each WITH YOUR NAME AT NUMBER 2 = 25 000 postings = 625 returns at $1 each = $625.

Finally, 625 people make 200 postings each WITH YOUR NAME AT NUMBER 1 and you get a return of $3125 (for every 200 postings) before you name drops off the list. Total income in one cycle = $3905. AND THAT'S IF EVERYONE DOWN THE LINE ONLY MAKES 200 POSTINGS!

From time to time, when your name is no longer on the list, you take the latest posting that is appearing in the newsgroups, SEND OUT ANOTHER $5 TO THE NAMES THAT ARE ON THE LIST, PUT YOUR NAME IN AT NUMBER 5 AND START POSTING AGAIN. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Let's review the reasons why you should do this

THE ONLY COST FACTORS ARE

5 STAMPS
5 ENVELOPES
5 $1 BILLS

Anyone can afford five dollars to put into such an effortless investment with SPECTACULAR RETURNS.

Some people have said to me "What happens if the scheme is 'played out' and no one sends me any money"? Big deal! So you lose $5 - but what are the chances of that happening?

Do you realise how many Internet Users there are? Do you realise how many times this scheme can be utilised over and over again - with COMPLETELY NEW people participating?

Remember, read the instructions carefully and play FAIRLY...that's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep
an eye on the newsgroup postings to make sure everyone is playing
fairly. You know where your name should be.

REMEMBER - HONESTY IS THE BEST POLICY.

ENJOY!

Yes, This is a more positive role for HF
people. The HF bands will soon be recovering
from the Southern winter so those signals
from the antipodies will be coming through.
Take a look for the home-stations, mobiles.
During the third weekend of October is JOTA,
where amateur radio combines with the
scouting troops and camps, so another
opportunity for some pleasant operations,
with the Worlds Youth - in scouting.
On one occassion I QSO'ed to Tatum Park,
near Mancester, UK. during the period. 73
Winton at ZL3AO.

: apparantly it doesn't.
:
: Hafa Adai,
: Jim KH2D

I have found Mr Kehler's comments rather amusing in the past, his tart remarks even creative at times but I see the signs of Island life wearing away on this mainlander.

Guam attracts two type of mainlanders...the entrepreneur and the social misfit. Since Mr Kehler chooses not to publish his phone number in the Guam Telephone directory (nor do his ham friends who share the same PO box) or list PacRim Golf Accessories in the yellow pages....the answer becomes more evident. Mostlikely, Mr Kehler uses his "skills" to wrench dollars from Asian tourists, a captive audience to be sure. Let's hope these tourists don't use Mr Kehler as a model for all Americans.

Since he's of the Vietnam era, maybe it was his military service in Nam that brings him to this place.....but alas, his name doesn't appear to be with those who fought in that awful war.

We'll be sending Mr Kehler back to the mainland soon..... Jeff Evan's nightly influence, load shedding and Island life wear on him to the point that he'll join his comrades's in Montana soon.

Hafa Adai to you too, Mr Kehler....from someone who know it's true meaning

Jeff

I must be missing something!? What in God's name is this "Loyal Order of
CW Olde Fartz"???? Is it one of the countless DX nets that spring eternal
on 20???

Well..... Try homebrewing a wee CW QRP rig (easy) and working Europe
on 3 watts when the cycle comes back to 28.mhz. You will know a wonderful
feeling of accomplishment.

Peace to All!

>>limb.
>
>I'm saying that we'd be further along if we had not driven hordes of
>technically skilled/computer-savy folks away with the code requirement.

Years ago that was correct. When packet was enjoying its first burst of activity, there was not yet a code test free license and it was harder to create a critical mass. That's not as true at VHF+ now where we do have a code test free license, but now we have to fight an established inertia toward the slower methods. That's a problem, but we're dealing with it, and it would have existed to some extent even if Morse testing had never been an issue.

The Morse requirement is still a problem at HF, but restrictive rules are a bigger problem there. The rules were shaped around RTTY, plain text, and plain FSK. They express a narrower is better bias. As people who've studied communications theory know, narrow is not always better. There are situations where it is better, and other situations where it is not. Many of the modern techniques fall in the latter category.

HF in general is plagued by too many restrictive sub-bands. This is hindering fuller exploitation of the resource. As Phil Karn has noted, use of SS technique on HF would have very large benefits toward more effective utilization of the resource. And of course systems like Piccolo and the NATO STANG modem require a larger bandwidth in which to operate than is permitted, yet they use the bandwidth more efficiently than most current narrow techniques so the net effect is that congestion should actually decrease. Narrow technique is not necessarily always inferior, however. There are cases where narrow is best. We should retain the flexibility to go either way as the situation warrants.

>>I'll tell you why packet has stagnated. It's because hams (in general) reflect
>>the apathy and laziness of the general population. Couple that with the (until

>
>New blood and new ideas are what are needed to leap forward ...

There's a good bit of truth to this. This obsolete paradigm is
a costly hinderance. I constantly see people tying up as much
money in a 1200 baud station as it would cost to run 56 kb.
This is ridiculous. It is an educational problem, however. The
task is to show people the better way and explain the benefits.

>>Besides, you can't get more than 2 hams to agree on anything. I remember a few
>>years ago when they (BBS ops, node ops, etc.) tried to get together to form a
>>comprehensive plan for a network here in DE. By the time the "meeting" broke
>>up, there were threats of bodily harm being flung about because these jack-
>>asses couldn't park their egos at the door and compromise for the good of the

>the Application Layer ...

You don't understand, Carl. Jim has touched on a very real problem.
Data networks are 90% people and organization, and 10% technology.
We have the technology in hand, that's not the problem. The problem
is to have the people and organizational structures in place to erect,
operate, and maintain the network. This is expensive, time consuming,
and requires an enormous amount of planning, coordination, and politicking.
This is where critical mass becomes vital.

It is necessary to develop a consensus among a large enough group to
form a critical mass in order for a network to be successful. In essence,
a club has to be formed in much the same way that clubs are formed around
regular voice repeaters. We call them LANs (though technically they should
be called MANs). And there needs to be an umbrella structure erected to
encompass multiple LANs, tying them into one coherent network. Generically,
that's a WAN, in Georgia, we call this GRAPES. It is structured as a club
of clubs, IE its members are the actual LANs it encompasses, not individuals.

Forging the consensus is the hardest part. As Jim notes, when you get a group of hams in a room, it gets mighty cramped due to all the big egos involved. It requires a deft political touch to get all these people to agree on what to have for lunch, much less on how to structure and build a network. We were fortunate to have a few people with just such political skills. This still didn't happen overnight. It took years of work, and still takes work to hold it together.

As with most voluntary organizations, the main problem is that 100% of the members have opinions, but only 2% are willing to actually do any work. Those 2% can be easily burnt out if you're not careful. There's no way that a small core networking group can maintain a statewide network by themselves. In Georgia, the mileage alone is daunting. So each LAN is charged with maintaining its own equipment, and contributing to the maintenence of the interties. That way the workers don't have to chase all over the state all the time.

It takes money and people to build a network. The money isn't that much, but the people are absolutely critical. Ongoing recruitment and training are required to replace workers as they burn out, or ideally to rest them before they burn out. A network with lots of downtime quickly ceases being a network. The net has to function, and it has to function reliably. Outages have to be corrected promptly. That takes dedicated and trained people. There are never enough of them.

We've had problems from time to time in this area. We've burned people out, we've had prolonged outages, and we've had problems holding the network together as a result. The job isn't over when the last piece of hardware is installed. It's just beginning.

The problem is that the network developers get bored when the network is completed. They want to go on to other things. So a different group has to be recruited and trained whose main focus is maintaining and operating the network. This wasn't obvious to us in the beginning. It is painfully clear now.

People, people, people, that's what networking is about. The more people you have, the better job you can do. And to get those people to work together requires politics, politics, politics. It isn't always pretty, but that's the way it is.

Gary

3004. "Exotic" HF Digital vs. CW,SSB

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-14 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <01bba273$0adcc580$84070ccf@jim-reid-1>
Source record: 216807
Cross-posted to: rec.radio.amateur.misc,rec.radio.,amateur.digital

The HF digital "-tor" and Clovor modes are evidently not suited to
the usual (that is, what is going on now) for today's HF radio
amateur. I had a KAM Plus for awhile, and found you can neither
send nor expect to hear a call for QSO by sending a CQ out on
a random frequency somewhere in the generally agreed upon
digital band windows. You can with an RTTY siganl, but all the
others, I was told, require a prearainged freq,time schedule!
Is this true?

I, at last, gave up, and sold the KAM PLus. Now
I have Brian Beezley's excellent RITTY soft ware program which
allows me to operate RTTY directly from the computer without
the need for a TNC. This software has excellent capability for
weak signal RTTY DX operation.

I also found, that even if you were to try to join in on a 20 meter
packet frequency, you would be excluded as you "didn't know the
code, or proper password to use to get in". Is this true?

Evidently operators of the digital modes, other than RTTY, do
not send CQ's or otherwise entertain QSO's with other than
predetermined recipients. Is this true?

I have never heard a DXpedition use any digital mode other than
RTTY on HF. I understand that after much discussion on the newgroups,
that CW is not considered a true digital mode; too much human
randomness creeps in to mess up the true digital timing nature.

If the above points are true about HF digital modes, regardless of
their superiority in thru-put rate, error freedom, etc., they are likely
never to be accepted by the general HF amateur community. The
HF operator, unlike the VHF operators, like to roam the bands,
find random and far away folks to chat with on both SSB and CW.
Both of these modes have there pros and cons, but at least you
have a chance of hearing a weak signal calling for a contact on a
random frequency in the band, and probably being able to establish
a plesant QSO, QSB and QRM permitting. If you can't find and work
the random more exotic digital signal soliciting a call with whomever
happens along to find it, seems like it is not a true HF band
amateur radio experience. Of course, I am old fashioned and
licernsed since 1950.

But would appreciate clarification, if needed, about these new
"exotic" digital HF modes.

How about the fact that the Tucson group put "RADIO PACKET" on the map
that is now being used by many commercial companies as a product in
the commercial market place on commercial frequencies for commercial
purposes ?????
I realize that this is old hat so far as the time scale is concern but
the facts have been loss over time.
The satellite area is also good in that packet and satillite are two
areas where the amateur have actually produced something rather than
an advancement by a commercial company.
When you write your article how about posting it in the news groups
for us to read. hi hi just being cheap.....

>Accessory cable out the back has pre-attached leads making wiring
>simple and convenient.

It is good, considering the size it is incredible, but it isn't great. Sensitivity is high, but so is the likelyhood of overload. The filters are flexible, but suffer blowby, and lack choice of bandwidths (one optional filter is not enough). Still, it does work well for the digital modes using the 500 Hz filter, and I'm using mine that way too.

I really do like the little radio, and if the overload problem were solved I'd like it even more. (You can deal with it manually, with the attenuator, but you shouldn't have to, the IC735 doesn't have the problem, so Icom knows how to prevent it.)

And what's the matter with; hole theory, relativistic momentum equations, or just a touch of quantum mechanics. Actually all of the above are useful in amateur radio but unlike CW you don't have to master them to enjoy the hobby.

<snip>

I do not agree. The newer "PSK" modes are far better, in terms of
performance, than are older digital modes.

> I had a KAM+ for awhile, and found you can neither send nor expect

> somewhere in the generally agreed upon digital band windows. You
> can with an RTTY siganl, but all the others, I was told, require
> a prearainged freq,time schedule!
> Is this true?

NO! It is NOT True. I think you were misinformed or do not
understand. Stations calling CQ do so in FEC and a TNC can
MONITOR an FEC broadcast. You merely turn ON the monitor
function of your TNC with a command.

CLOVER stations emit a "request for QSO" frame which is
easily monitored by any other CLOVER station.

> I have Brian Beezley's excellent RITTY soft ware program which
> allows me to operate RTTY directly from the computer without
> the need for a TNC. This software has excellent capability for
> weak signal RTTY DX operation.

Brian has a nice program; however, ARQ is more powerful in terms
of weak signal performance and error correction than RTTY.

>....even if you were to try to join in on a 20 meter packet
>... you would be excluded as you "didn't know the
> code, or proper password to use to get in". Is this true?

Partially true... Some BBS Packet operators who exchange large
volumes of messages will only allow connections from other BBS
stations... and not casual users to tie up their systems.

PACKET on HF can be used for QSOs, BUT for the most part HF
PACKET is dying out, being replaced by PACTOR and CLOVER.

> Evidently operators of the digital modes, other than RTTY, do
> not send CQ's or otherwise entertain QSO's with other than
> predetermined recipients. Is this true?

Nope: Totally untrue.... PACTOR-1 and PACTOR-2 are open
architecture systems, as are AMTOR and CLOVER. There are
stations 'calling' CQ all the time. All you need do is
tune across the band. The only precondition is that ARQ
modes currently only support one 'link between stations'
at a time. Roundtables or multi-party QSOs in these modes
require an FEC broadcast by each station.. without linking.
And so they are less reliable.

> I have never heard a DXpedition use any digital mode other than
> RTTY on HF. I understand that after much discussion on the newgroups,
> that CW is not considered a true digital mode; too much human
> randomness creeps in to mess up the true digital timing nature.

CW by definition is a digital mode. It is a true digital mode and
of course, it was the first digital mode. Some DX stations have
been recently working PACTOR, when not in a contest.

> If the above points are true about HF digital modes, <cut>

>
> 73, Jim, AH6NB

By the way PACTOR-1, CLOVER, PACTOR-2 and not really exotic at all,
they are just NEW. PACTOR has been very popular and has all but
exterminated AMTOR from the HF hambands. PACTOR-2 has some really
nice performance.

For more about PACTOR, see http://www.pactor.com

Um, doesn't the advanced test have impedance calculations? I know
the Extra does. Guess what? You use complex math for these, well,
if you don't memorize the answers.

Afterall, CW is just one of many modes that an amateur can elect to
use, but complex math is *the* way to perform impedance calculations.
Impedance calculations relate to radio in general, and therefore
apply to all modes an amateur may elect to use. Perhaps I'm
being snobbish and elitist, thinking that that the fundamental
theory of how radios are built is more important than learning
one peculiar digital coding method by ear, but I'll survive.

3015. The truth about Juno mail.

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-14 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <323B40F6.6429@ccsnet.com>
Source record: 216818
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.policy,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I hear packet stations pushing JUNO, read this:

At JUNO the customer philosophy appears to be "the customer comes last."
I had an account with them (kotzebue@juno.com) and as you will read
below I supported them strongly. However they have a rule if anyone at
all complains about you they will terminate your service. It does not
matter whether the complaint was justified or not or even if it had
anything whatever to do with your JUNO account, you will be terminated.
What is even worse I was terminated without ANY notice and they
were unresponsive to any EMAIL (except their automated replies). Also if
I tried their tech support and I was on hold for a long time and when
you do get through they did not followup (so I do not really know why my
account was cancelled or even if it is a technical problem, I am
surmising I was removed). Thus if you had set to receive all your Email
via that account, you are screwed as those that write you will have
their mail bounce back.

Even when JUNO works it take me several calls to avoid crashes, hangups etc.

Now I do have another JUNO account as their software was simple to
overcome and simply sign up another account. I was inconvienanced by the
termination but only a bit as I had two other Email accounts.

Here is what I told them when they said they had a complaint about them.
(I got NO response).

FIRST I am one of your biggest supporters. I have sent out messages to
over 50 friends who were interested in your service. The more users the more
revenue you gain from advertisers.

I send no internet users unsolicited messages from my Juno account.
I post to the internet via my Internet Service Provider, which is not
you.

If I have my address listed in a signature how does that violate any
terms of an agreement? You are well aware almost anyone will complain about
almost anything on the internet.

I only send messages to those that send me messages except in a few rare cases.
I will be mindful of your concerns but please do not defend those that would
make false and/or misleading claims.

As far as violating the terms of the agreement, I read the terms and the
only thing that comes close follows:

3.4. . You agree that you will not interfere with any other person's use and enjoyment of the Service or any other online service.

That sentence is impossible to comply with as written. If I post a message saying I do not like Nazis (which I did) that can be inferred as "intefering with someone's enjoyment of any other online service." Thus do expect all your users to have no opinions on anything? If you wish to deny me service based on that provision I will go from being your greatest advocate to a very unhappy former customer and just as I have not kept my pleasure of using Juno to myself, I will not keep my displeaure to myself either.

Burt Fisher

Here is the complaint they sent me which caused me to respond above:

Wrong, The code can be heard farther than ANY other means of
communication with the least power. Cheapest is that HAM is all
about. There was a time when MIR could be contacted with just 2 watts
and an HT. Not any more, you need POWER because all the people have
forgotten the basic rule of ham radio. MINIMUM POWER REQUIRED TO MAKE
THE CONTACT! Same goes for ALL other communication modes in ham
INCLUDING cw.

>>

Hmmm.... My little radio shack HTX-100 has been in beacon operation
for about a year. 5 watts travelling over 100 miles locally on CW and
all over the world by propigation? Try that with any other means of
communication on ANY other band. 28.284 CW. I would think this
little radio shack 10 meter rig will probly go another year or so
without problem. Just keying away.

>> * It is an equalizer,negating age,speech impediments and dialectical

The largest deficiency in the Hobby today lies in the mindset of those who enter thinking Amateur Radio is a kind of "Advanced CB" world, and who bring with them the same whining and culturally bankrupt attitudes that prevail on 27 mhz. This thinking is furthered by the present perception that numbers alone will save us from being made fodder by the ever increasing demands of a profit driven Communications Industry.

Morse, while certainly an ancient form of communication, is essentially like any other language. It is easy to learn and can be picked up by children in a short time, why not the rest of the population? It strikes me that those who spend so much time complaining about the code would more efficiently use the oxygen and resources they consume on this earth by learning and teaching the code, therby ensuring it's future use in our hobby.

A Filter??? Maybe not, but detractors should spend some time on 30 meters listening to the new Hams and how hard they work at becoming proficient CW operators...it's heartening to hear.

Perhaps it would be better for all of us to heal the wounds that divide us and present a united front at Warc. Our enemies are many and their percieved spectrum needs large. I believe our entire hobby is at stake.

I've been reading quite a few messages about doing away with CW or at least not requiring it on various levels of exams. I completely disagree.

CW is an art form. We live in an instant gradification society, "I want it now !!". We've been pretty much conditioned in this mode of operation. Why does it have to include ham radio? What about tradition? Ham radio has a great tradition and CW is part of it. Things like making your first QSO as a new novice (I still remember mine), developing your skills as an operator on CW and phone, moving up to the next license--these are things you can be proud of. Which mode gets through better is not the point. Sure I 've been on for almost 40 years now and I'm an old -- whatever, but I am still proud of my abilities on CW and phone. You are advocating the loss of opportunity. No one "even in the dark ages" wanted to spend time on CW at the start. All I wanted to do was talk on phone. That was in the beginning, but as time passed and my skills increased I had gained something.

I agree that change is usually indicated from time to time. Well, we got it in handfulls, no-code licensing, VE testing, expanded bands. Then because someone decides that CW is in their way of more frequencies, the answer is do away with it, rather than taking on the challenge. Should reward be instantly granted on request? Ham radio to many may be like their computer, if its running too slow go buy an upgrade. To others, like me, ham radio means a great deal more. You are really the loser. Talk to some of the old timers. Develop some real pride in your hobby and you will try and protect it.

Because I am an Extra does that make me elite? Well, it took me 20 years to get there (many failed exams at the FCC). No, I don't think I'm elite, just proud of what I did. Do I deserve more spectrum--you bet--I earned it! You earn it, and don't degrade the accomplishments of others.

>>>>>>>>>> snip <<<<<<<<<<<

Jerry,
My feelings are almost opposite of yours. Since I have gotten on the Internet and started following the code debate I have become more pro-code. Mind you I am only a Tech plus, but I intend to upgrade and will use CW. I have listened to the arguments and have yet to be swayed by the anti-code logic. Change the band plan? For what and how? (Remember, you must somehow satisfy all modes that are used) Change the test? To what?

I am sorry Jerry but I am not convinced. You use the phrase "Code Nazis" to describe the pro-coders, but I view the code as the TANSTAAFL. "There ain't No Such Thing as a Free Lunch" There must be some way of making someone earn the right to be a HAM. I see the code as the final hurdle to graduation.You, Carl, and the others may be right that the Code will go away. But what do you intend to use as a final hurdle. If you give away the Amateur Radio License then why should anyone respect it.

My final thought is this:
Robert Heinlein in his novel "Starship Troopers" said this -
The American Constitution guarantees you the right to the pursuit of happiness, but no where does it guarantee you the right to succeed in your pursuit of it.

And somewhere I remember being told that "that which is not earned but given freely away has no value."

Do not devalue our Ham License by giving it away, Please.

Just as an aircraft designer might not be licensed to fly what he builds,
these folks you revere of don't need a license to put their ideas into
practice. How many designers at IK&Y are hams? Besides, if there was any
chance of a dollar to be made from their work, do you think the prospective
hams you claim that have been turned away would choose to endow their ideas
upon the amateur community?

Of course there are ways of making money off of amateurs, such as attempting
to get the code tests eliminated so one's company can market their HF gear
to a greater number of hams. That's what you're attempting to do, right Carl?

>New blood and new ideas are what are needed to leap forward ...

... which will translate to huge profits for your company's future line of
HF products?

>>I'll tell you why packet has stagnated. It's because hams (in general)
>>reflect the apathy and laziness of the general population.

Did you ever consider that we're saturated with so many modes and
activities that we might just be satisfied with where we're presently
at?

> ... the place where there's LOTs of room for improvement and
>experimentation and advancement by hams is in Layer 1 and Layer 2 and in
>the Application Layer ...

The F1 and F2 layers certainly do need improvement but only the sun and
God have control over them.

You must have just bought stock in the company Carl works for. His voluminous postings are for one and only one reason: He's hinted that the company he works for might be producing HF products in the future. Now just think what a no-code HF license would mean in regards to his bank account.

You can praise the virtures of the content of his articles but in the long run you're only aiding his selfish efforts to reap profits for him-self and his company at the expense of turning HF into a dumping ground.

>For the comprehension challenged. I was not against the code when I got

AL>From: larson@net.com (Alan Larson)
AL>Subject: Re: re who enjoys cw

AL>In article <5155b2$nf1@news.ais.net> carl@ais.net writes:

AL>>Seriously, despite your sadly mistaken views, CW is NOT "king under
AL>>those conditions" ... digital is, plain and simple. No contest. No
AL>>question. If you don't believe the technical facts, you're not a "bad
AL>>person", you've simply chosen to ignore reality.

AL> No, Carl. Digital is NOT king under those conditions.

Er...a presentation can be made to show that it can be as Carl says
it is. This has already been done, demonstrated in real hardware
elsewhere in electronics and communications. Proof of this could be
repeated, but the number of messages and quantities of illustrations
digitized and attached to messages would require man-weeks, perhaps
man-months, to show. After the last of multitudes of explanatory
messages, the response would be greeted by hoots of derision,
pejoratives and hawhaws of various kinds from those who refuse to
listen. There isn't any point to going through the exercise.
Eventually, you will be able to buy a device that does what Carls
says will happen at an electronics store...and much later, at an
amateur radio equipment store.

AL> If digital were so wonderful, it would be in use for some of the
AL>simple weak signal modes. However, it is *not* in use for moonbounce.

Not presently. A general methodology for such a link can be pulse of
a kind not known to be experimented with in amateur communications.
Such a pulse could be for MCW reception. The pulse would not be that
of a radar transmitter but a "wide" pulse containing a pattern
which is replicated in a SAW (Surface Acoustic Wave) filter in the
receiver; for bounce, the filter could be the same one for transmit
as well as receive. The action of the analog SAW filter is akin to a
coincidence detector although not the same as that old radar circuit;
signal-plus-noise along time is discriminated against noise alone,
small portions of signal-plus-noise adding in voltage in the filter
serrations until the pattern portions all add to a relatively high
voltage. On the transmit side, average power is quite low, spread
over the time of travel through the SAW. In the receiver with a
matching SAW filter, the signal is equivalent to a high peak power.
Peak power ratios of 20 db and more versus average power have been
achieved (1976).

AL> Not only are most of the popular digital modes quite a bit below
AL>the performance of the best digital modes, but the digital mode
AL>equipment is not well suited to emergency operation.

I'm unsure of your "suitability" criterion. What little emergency communications I've heard in Southern California, between the Santa Monica mountains fire of 1961 through the Northridge earthquake of 1994, have been largely voice on the amateur bands, and that only third-party traffic. Local communications for public safety and utility service were handled adequately for public safety and utility repair efforts.

AL> While it is possible to construct a computer/digital station using a
AL>laptop computer and portable interfaces, the simple truth is that
AL>computer stations are generally quite a bit more complex than their
AL>non-computer counterparts.

Only if made from stock subsystems with the only "homebrew" being the software...or made from SSI or MSI digital ICs standardized three decades ago. Once built, the operating system program would be frozen in ROM and considered just another piece of hardware. But, the number of digital devices available today is enormous. Programmable microcontrollers (microproccessors with built-in memory and other ancilliary functions on one die) can handle much, if not all of the overhead work in conversion of digital modulation schemes that are not standard. Standard digital modulations may use already-available digital devices. Their complication exists, but that is largely in trying to explain what they do. Their physical size and power demand is quite small and the mean time between failures is hardly less than older, proven, standardized digital ICs. It would be no more complex than a circuit board in the present-day transceiver appliance box.

AL> When I can pack the 'digital' station in the same space and
AL>weight as a small CW station, operating off of small batteries
AL>for extended periods of time, and for the same COST, then you
AL>may begin to have a claim. Until then, we are comparing amateur
AL>with military budgets.

Cost comparisons can be done with existing schematics and real, honest prices of small quantities of parts purchased to build a station. The actual cost, when totalled, is not the small figure expected or maintained by myth. A kit form is much cheaper, courtesy of the price reduction a kit maker enjoys in large-quantity purchases. There are very few kits, of all those available for any ham use, that push any state of the art...ergo, the kits are likely to be for simple designs using old, reliable circuit configurations.

A FET/CMOS receiver uses very little power. The major power drain in a transmitter is the final amplifier. Batteries exhaust on the total time of current demand, not on duty cycle. The final for CW or FM is the same, Class C. FM voice emergency message transmission takes approximately the same time as CW message transmission, less if the

CW operator is not proficient. Note: True emergency traffic handling does not allow the shortened words and acronyms used in ragchewing and contesting. Emergency voice reception can be heard and understood by all listening to a speaker, whereas CW requires an operator to decode the code. In an extreme emergency, a voice transceiver could be used by anyone. A CW transmitter could not.

Using a 1960s frame of reference for hardware and technology, no one but the government could afford small, portable digital communications. Today it is quite different. As one example, look at today's wireless LAN equipment: Low-power-drain, high-speed digital links do, indeed, work in severe environments, unattended, at industrial prices, not military. The present-day average transceiver appliance box has enough modulation modes to handle everything but "digital" with no significant power drain reduction when operating CW compared to other modulations. Digital could be added without sacrificing any power demand standard. (this includes the HTs) The only thing missing is an adaption of what is already in use in industry or a modification of same for specific amateur needs. Microcontrollers are available in many many types and styles, development support hardware and software exists for all models. Digital communications technology exists, the experience in the electronics industry is available. It just hasn't been fully utilized by amateur equipment designers.

One has to define "emergency" use or assistance by amateur radio today. As it is now, local safety, utility, and medical services have their own radios and networks and are much more acquainted with true emergency situations locally. If a true statewide or national emergency were to happen, state and federal government communications (military or civilian), plus communications companies can handle the comm. The "emergency" service that could be rendered by an amateur in the 1930s (provided electrical power was available) was a valid claim then since other services did not have many radio communications sets. That is no longer true at four years from the end of the century.

Here is a summary of news items covered on edition #181 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 20-Sep:
-
1. ARRL Challenges New FCC Regulations on RF Exposure Limits
2. Mexico Successfully Launches Its First Amateur Radio Satellite
3. Amateur Radio Icon Hospitalized after Suffering a Stroke
4. Special Event Station Calendar
5. ZS5AKV Elected New President of SA AMSAT, Succeeds ZS6BTD
6. FCC Clarifies Vanity Call Sign Filing Procedures
7. Arizona Man Fined $6,000 for Interference (Thanks to Hillary!)
8. League Membership Reaches New All-time High
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. Weekly Propagation Forecast
11. "The RAIN Dial-up" from Chicago
12. Two Meter DXCC #9 Awarded to New England Ham
-
Funding for the program's transmission and production expense was
provided this week by a grant from Mike Reynolds, W0KIE, of Tulsa,
Oklahoma, and the W0KIE Satellite Network, which carries "This Week
in Amateur Radio" to affiliates throughout North America.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at

>>> >police will arest and fine you if it passes. The Bill reads out as
>>> >follows:
>[snip]
>>> To all ham operators:
-snip-

It sounds to me like this bill was written by a single person (Mr. FEINGOLD) and not reviewed or critizised by anyone with a technical understanding of the problem.

> (e) Where radio frequency interference to home electronic

Why exclusivly home electronics? Why not commercial electronics as well?

> equipment is caused by a CB radio station through the use of a
> transmitter or amplifier that is not authorized for use by a CB
> radio station pursuant to Commission rules, the State, county,
> municipal, or other local government shall not be preempted from
> exercising its police powers to resolve the interference by
> prohibiting the use of such unauthorized equipment or by

Possible loopholes -Is someone operating an amatuer radio in the CB band subject to this? I think it is clearly stated so, but how about someone using the same equipment at 26.0MHz? or 27.9MHz? Now they have no ties to CB radio. But these are the same people that bills like this are written to catch.

> imposing fines or other monetary sanctions. For purpose of this
> subsection, home electronic equipment includes, but is not
> limited to, television receivers, radio receivers, stereo
> components or systems, video cassette recorders, audio
> recorders, loud speakers, telephone equipment and other

> by the State, county, municipal, or local government shall not
> preclude concurrent action by the Commission. Nothing in this
> subsection shall be construed to diminish the Commission's
> exclusive jurisdiction over radio frequency interference in any
> matter outside the scope of this subsection.'.

As others have pointed out, the police are there to enforce the laws, not interperate them. They collect evidence of an alleged illicit occurance, and forward that evidence and information to the judicial system. The judicial system decides wether or not you have broken any laws.

One problem here is that the police do not have the ability to properly collect sufficient evidence for the courts to make a decision (I suppose they would need spectrum analyzers, power meters, frequency counters, recievers, etc). That would mean the only evidence they could possibly collect would be the equipment itself (Gary Coffman had the best summary of that scenario in a previous post).

The idea presented here could work as a law, but it would need more specific definitons and need to spell out what sort of equipment and knowledge is needed to enforce the law.

San Diego has several CB stations broadcasting over 1KW, and while there not my neighbors, I'm sure the neighbors of these guys are noticing some effects. It would be nice to put an end to them.

I agree with the purpose of this bill, but it is poorly written and could encourage other types of activities, making this a bad bill.

Since this was posted the FCC clarified its procedure in a Public Notice
and also via their Consumer Information 800 line (which I found very easy
to get through on). The applications will be DATE stamped (but not with
the time) and will be processed in the order they are received at the
processor's workstation, NOT at the Mellon Bank in Pittsburgh. In other
words as long as you can get your application delivered and date-stamped
on Monday Sept 23rd you have as good a chance as anybody whose application
was received on the same day.

So, we're not going to drive to Pittsburgh - YAY!

73,

Michael Crestohl, KH6KD/W1

I concur - best way is by express mail or courier - hand delivery does NOT give anyone any advantage. I had seriously considered hand delivery but research has indicated that this is not a viable option.

It is my understanding that this proceeding has been on-going
for a considerable period. Certainly the deadline for action
has been known since the passage of the Telecommunications
Act. Are you suggesting the ARRL was caught by surprise? Or
are you suggesting that the ARRL failed to keep amateurs
informed on this issue so that they could comment on it
earlier in the proceeding? It is also my understanding that
it is normal procedure for the final wording of new rules to
not be known until the report and order is issued. Is there
something different with this proceeding in that regard?

>2) The 50W power threshhold for amateurs is arbitrary and
>likely to trigger concerns on the part of State and local
>land-use regulatory agencies that power above 50W is somehow
>"bad" and cause for restriction on their part.

That's a concern, but the stronger Federal pre-emption
offsets that. A total pre-emption of amateur antenna height
restrictions would have been more welcome, and justified
on the grounds of gettting potentially hazardous RF fields
up away from the public.

>3) The 50W power level is unreasonably low, and differentiates
>between Amateur Radio licensees and other radio-service
>licensees which are treated much less restrictively.

The 50 watt exclusion is certainly arbitrary. It is unreasonably
high in some instances. It may be low in others. There's no way
to tell unless measurements and/or calculations are performed at
the individual station, and that's what the new rules require
above the 50 watt level. So there was no reason to have any
exclusion at all. Other services were not granted a similar
50 watt exclusion.

It shouldn't even have required a rulemaking since it is only
good engineering practice, which all amateurs are expected to
follow, to acertain whether RF biohazards exist at an installation.
We've done it for years in broadcast. The only thing this proceeding

really needed to do was to establish the threshold levels of concern.
It did that by adopting the NCRP limits.

Having had more than enough experience with lawyers, I feel confident in saying that most of them don't understand engineering issues in the least. That's especially true of political lawyers who think that they can modify physical law with retoric or by legislation.

It isn't their fault mind you, they haven't been trained in the fundamental nature of physical law, but they have been trained to look for loopholes and weasel words in Man's law. Many can't tell the difference. When told a resistor must obey Ohm's Law, they'll look for loopholes to try to get the resistor off.

There are a few, a very few, lawyers who have also trained as engineers, or have backgrounds in one of the physical sciences. They should have a clue, but they are very much the exception and not the rule. In fact one might be forced to say that they must be schizoid to hold two such diametrically opposed world views. Lawyers, especially lawyers in government service, always seem to think that they can cut a deal, or that reality will conform if they pass a law. But Nature doesn't make deals, and Nature only obeys its own laws, and always obeys its own laws, no exceptions, no compromise, no deals.

Lawyers usually don't see the humor in aphorisms like, "Gravity, it's not just a good idea, it's the law." They really think it makes sense to set standards such as the one which requires vehicle emissions to be below ambient. Statements like "everyone should have an above average income" don't strike them as absurd.

Lawyers are trained to be fine logic choppers and debaters. They are trained to con 12 rustics into believing black is white (or that OJ is looking for the "real" killer). They are not trained to deal with the reality underlying their chains of logic or retorical devices.

Lawyers are the ultimate gamers. They can play any game under any set of rules, but they don't seem to grasp that there is one game where the rules can't be broken, or even bent just a little. That's

not because it would be "wrong", but because there is no alternative. Disobeying these rules isn't a choice that can be made. Even if one doesn't know the rules, one still has to play by them nonetheless.

That's a thought completely alien to the lawyer. It means ultimately that he is irrelevant. Without the possibility for lawbreakers, there is no need for lawyers. That is not a thought an ethical lawyer could embrace without changing careers. Lawyers tend to think that there is always a fair and equitable solution to every problem. But Nature has no concept of fairness or equity. A good engineer has to live with this every day. He knows he can't break the rules, no way, no how. His job is to understand the rules as best he can, and work with them to accomplish his tasks. If he fails, it is not because he broke the rules, because he can't break the rules. He fails because he failed to understand and apply the rules properly.

And that's why lawyers have such a hard time grappling with scientific and engineering problems. Their worldview is fundamentally different from that of the engineer. It is not because they are stupid or venial, though there is certainly plenty of that in the legal profession. It is because they don't view the world the same way that an engineer must. Lawyers really believe that they can change the rules, an engineer knows that they can't.

>suppose we have a national emergency with very
>poor prop conditions are you guys on packet or the
>other digital modes going to get the message across?

If we're using PACTOR II, we can work at -18 db below the noise floor. If you're using OOK Morse, you can't. Do you really believe that services which have to deal with weak signal conditions would willingly abandon the best tool for the job? Do you think, for example, that NASA engineers are stupid? Then why have they chosen to use modern digital techniques under extremely weak signal conditions rather than OOK Morse? Why aren't there rows of headphone wearing Morse operators receiving the signals from Voyager? Could it possibly be because OOK Morse is *not* the superior way to get a message through under weak signal conditions?

>how about weak signal ssb condx i dont think so.
>cw is king under these condx.

That's like saying that the one eyed man is king in the land of the blind. Not only is it not necessarily so, as the tale showed, but it is also a strawman comparison.

>call me a old fart or
>one that resist changes if you want. but the truth is
>cw is a requirement for a ham license and i hope it
>remains who needs another 11meter band type of
>situation?

It would be amusing if it weren't so pathetic that so many Morse testing adherents seem to embue a test of psychoacoustic conditioned response to encoded Roman text with measurement of moral qualities. A flatworm can be conditioned to respond to stimulus too, but that doesn't embue it with any moral superiority.

(Of course you can cut up a conditioned flatworm and feed it to other flatworms and they'll exhibit the same response to stimulus without the need for extensive conditioning. Perhaps that's how to clean up CB, we'll cut up some Morse

conditioned amateurs and feed them to the CBers. That will
then somehow make them morally superior beings as well.)

Uh huh, and how many QSOs would they have made if it had been their transceiver which got smashed? Or merely the speaker cones of the radios soaked in salt water? Radio is inevitably a technical enterprise. It was the luck of the draw that their digital equipment was damaged rather than their SSB or CW equipment. Modern digital electronics is as robust in a modem as it is in a transceiver, or as susceptable to damage. They are to be congratulated for getting it working again while being in "the most inaccesible place in the world." Would they have done so well if it had been their transceiver which was damaged? Perhaps, perhaps not. It rather much depends on the nature and extent of the damage doesn't it?

As an aside, I would note that in my experience digital ops are less fanatic about Dx gaming than other HF operators. So I wouldn't have expected a high count on digital even if their equipment had been undamaged.

>us believe.

I don't recall the first article you mention, but I do the latter two. They appear to be good solid work, but I don't think they are novel in the sense of Sam Harris' parametric amplifier. That was a radical departure from the conventional wisdom. What we see in the articles you mention is just good solid application of well understood circuit techniques. Nothing wrong with that of course. It is very good work. But it isn't a major breakthru.

What Sam did was on the level of Armstrong deliberately introducing positive feedback to a detector. There are few examples of that sort of thing in hardware design today. There is more of it in software design. That's to be expected given the relative maturity of the two disciplines, and the rapidly increasing capabilities of inexpensive digital hardware.

Five years ago most amateurs couldn't spell DSP. Today many of them use it as a routine part of their stations. That's revolutionary. And it is not a fad likely to quickly pass from the scene. We can do things with digital technique which are difficult or impossible to do with analog technique. That becomes especially apparent when we also adopt digital modulations and codings rather than just applying

the new techniques to old analog signal encodings. The use of strong FEC and powerful ARQ protocol techniques allow us to work at signal levels unheard of before digital encodings displaced analog encodings.

I agree that amateurs continue to advance the art on all fronts. But I think that the largest advances are happening on the software driven digital front rather than on the conventional analog signal hardware front. Like the switch from LP to CD, it is happening with astonishing rapidity. The day of the software driven (nearly) all digital radio is rapidly approaching.

>with no code tests. Where do we put them ? Do we decide that HF is no longer
>subdivided into band plans by license class and just call HF 'HF period' ?

Since 82% of present licensees already have HF access of one sort or another, I don't think we need be overly concerned about another 18% coming on board. Certainly if we were to remove the unwarranted sub-bands currently imposed according to tested Morse speed, we'd relieve some of the congestion on what are now the General segments even with an 18% boost in total numbers. The Advanced and Extra exclusive segments would see more occupancy, but not more density than is already present on the General segments. It should also be remembered that not everyone authorized to use HF actually uses HF, so the impact could be less than it might first appear.

>Somewhere I keep seeing 'Support the No Code General'. Does that mean
>that no code proponents support giving the general phone bands to the
>no code licenses and leaving the rest of the band as is ? Do we allow no code
>licenses the use of the lower part of the bands, now used for CW and other
>digital modes ? Or do we keep them on SSB ?

That's what Len Winkler seems to be proposing. I don't find it an especially attractive option, but it basically leaves everything unchanged except for giving current General privileges to those who pass the written tests through Extra. That would mean voice and image on the current General voice and image sub-bands, and data on the currently available General data sub-bands. I've seen no mention of prohibition of these Generals using Morse if they see fit, merely the removal of a formal Morse test and replacing it with a defacto on air test, IE if they can do it, they can, if they can't, they won't. So it is possible, though somewhat unlikely, that some of them might choose to become CW operators. There would be no modification of the current Advanced and Extra sub-bands.

I find this plan undesirable because it doesn't remove these artificial sub-bands. I see no justification for different exam levels for operations on essentially identical spectrum, using essentially identical equipment, essentially identical power levels, and identical modes.

OTOH I like the idea of telescoping the exam into one level encompassing all the knowledge amateurs are expected to have. After all, if the knowledge is legitimately necessary to operate in one part of a HF band, it logically is also

necessary to operate in any other part of the band.

The by mode sub-bands are a separate issue. Winkler doesn't address this. While in an ideal world these by mode sub-bands shouldn't be necessary, in the real world we probably need to retain them in some form to prevent the inevitable turf wars which would otherwise erupt due to mixing of mode usage on the same spectrum.

As a personal matter, I'd like to grab some of that underutilized spectrum toward the top of the bands for higher speed data use, but I'm realistic enough to understand that wouldn't sit well with the current occupants. There will be increasing pressure on the analog segments, however, as digital usage grows over the next decade. Just as the CD pushed out the LP, it is inevitable that digital will push out analog on radio as well unless regulations artifically prevent it.

Gee, 41V? That must have been some vibrator. I had a 40D myself.

Ted, the reason the Morse testing issue is central is that it is
the only requirement spelled out in the international regulations,
IE "send correctly by hand and receive by ear texts in the International
Code". There is no required form for other testing. The regulations
simply say that each national administration shall determine if the
applicant is competent to operate an amateur radio station. The means
of such determination is left up to individual administrations. Thus
there is nothing else to address at the WRC about testing other than
the Morse issue.

Other testing issues, license class distinctions, if any,
bandplans, etc are matters for each national administration
to address. We needn't concern ourselves with these issues
at the WRC.

There are other relevant issues which will be discussed at
the WRC, however. Notably the strong third party traffic
prohibition will be on the table as well as the language
limiting the content of amateur transmissions to "in plain
language and shall be limited to messages of a technical
nature relating to tests and to remarks of a personal
character for which, by reason of their unimportance,
recourse to the public telecommunications service is
not justified."

Those limits are generally considerably stronger than we enforce domestically. The plain language restriction has become vexing because it appears to eliminate the possibility of digital signatures to verify identity. There is no mention whatsoever of amateurs' public service and emergency roles in the international regulations. Amateur radio is defined only as a service for private technical investigation and self-training in the radio arts. It would be useful if we could get language inserted recognizing our role in public service and emergency communications. That would make the service's justification of spectral claims stronger. To do so, however, the third party prohibition must be stricken, and the content rule liberalized.

>IF we need to make class distinctions among hams, I think interest in
>modes, bands, activities, etc. should be explored as a criterion for a
>way of spreading out the congestion on the air. How about 3 basic
>classes of licenses (novice, tech, advanced, or whatever) with
>endorsements for cw, packet, ssb, EME, ...? The commercial licensing
>system uses endorsements.

The problem with that system is how do you deal with new modes? Remember we are a service for technical investigation and self training. If we can't experiment with a new mode until we are tested on it, who will write the test? If the new mode is just a gleam in the experimenter's eye, how can a test already be prepared? We need to retain the maximum possible flexibility here since it cuts to the very heart of what amateur radio is supposed to be about.

>I'd hope that we would forever stay away from anything that smells of

>neuron-depletion effect. Just because I've driven a car for 35 years,
>that doesn't say anything about whether I'm a capable, courteous and
>responsible driver.

The one thing that makes amateur radio a unique service is the permission (encouragement actually) for us to experiment, build, modify, and repair radio equipment. That is central to the purpose of amateur radio. It must not be lost, because if it is, we're no different from CB or any other personal radio service. Our self-training charter means we are to use amateur radio as a vehicle for lifelong learning. So time in grade *should* equate to more knowledge. We currently don't do anything to encourage that, and I'm not sure if we can. You know the old adage, "You can lead a horse to water, but you can't make him drink." We can offer the opportunity for lifelong learning, but there's no practical way to require it.

There is no test for courtesy or responsibility. That is something you have to demonstrate every day. We have only peer pressure, and the increasingly less likely threat of enforcement action, to maintain

order. The one thing we do have is an insistence on amateurs using their true names (their call signs) on the air. This is essential. If, as on CB, they can hide behind a handle, people behave as if they were masked and robed Klansmen, free to play out any antisocial fantasy they like with little fear that it will have reprecussions on their ordinary lives. This is the thing which forces amateurs to self-police, IE police themselves, in their behavior on the air. The certain knowledge that other people know who they really are makes them behave more respectably than if they could consider themselves part of an anonymous masked mob.

This is the one good thing about the compulsion amateurs have for collecting postal cards, and the anal need to keep logs. It serves to reinforce the need to have correct identification for every station worked. While it was a pain, the relaxing of the requirement to keep a log was probably a mistake, and the removal of the requirement to give both the call sign of the station with which you are talking as well as your own during IDs is also probably a mistake. If you want to point to one thing that has caused a deterioration in decorum on the amateur bands, this would be it.

>I am afraid that the League is focusing on the minutae, with the cw

>The '99 Conference will produce answers; it's supposed to. Since it
>is, however, a conference, I think we need to bring up some real
>questions.

As I mentioned, WRC99 is not the proper forum for those sorts of things. Those are issues we have to address on a national level, and more appropriately, internally within the service when possible. We do need to maintain a solid growth rate, not only to provide the political muscle we need to keep our allocations, but also to keep the service's demographics healthy. We cannot afford to allow the service to stagnate and grow increasingly grey as it did in the period between the imposition of Incentive (to pass faster code tests) Licensing and the creation of the code test free Tech.

We have experienced a 33% increase in the number of amateurs in the last 5 years. That has made some amateurs uncomfortable. I have very little sympathy for them. If they had not been so pig headed about Morse testing all those years from 1968 to 1991, amateur growth could have been a nice steady 6% a year over two decades, we'd be about 1 million strong today, and the service would have much healthier demographics than it has had. The code test free Tech has begun to turn things around. The average age of amateurs has declined by 6 years over the last 5 years, but

it is still too high at 52. It should be about 42. Amateur radio
still needs another dose of strong medicine to unclog the pipes
and put things right.

3043. Re: U.S. Navy CW Call Signs

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-14 00:00:00 UTC
From: "Mark L. Bary" <MBary@nmaa.org>
Message-ID: <323AB505.7582@nmaa.org>
Source record: 216872

Mike,

There's a publication out that lists all the callsigns for ships, shore stations, etc., in the U.S. I can see it in my mind but can't come up with the title; it's about an 8.5" x 11" format paperback about 2" thick. EEB in Vienna has one or more on their book shelf. If I get down there today I'll send along the title. Otherwise, you might consider calling them on their order line and asking about it (703-938-3350).

Hope this helps.

Does anyone have the wiring information to construct a cable to connect a personal computer to the ACC-1 jack on the back panel of the Kenwood TS-440? I assume this cable would connect the transceiver to an available serial port on the PC. Any information would be appreciated.

Thanks,
Mike, KI5MP

Is it safe to test a piece of coax by putting a dummy load on the end and a tx and swr meter on the other and checking the swr or is this a bad idea for my HTX-202? Of course this will only check the swr at 2 meters, but if there is anything seriously wrong with the coax, it will show up right? any help would be greatly appreciated. 73's tyler

>Carl - wa6vse
>carl@ais.net

That sounds reasonable, but I can think of one problem right off the bat.
Somebody (the FCC database) is going to have to keep track of who is
a no-code whatever vs. a code whatever, which will almost double the
existing amount of license class. We already have three types of techs
now. Maybe it would be simpler to make the general class, with the existing
privleges, a no code ticket on HF ? I'm still not clear on what the WOG
thing is supposed to be. I am starting to think that part of the problem is
the fact that the pro-coders (me included) don't have a clear picture of
what of what anyone wants other than 'HF access'. Also, a no code extra
ticket might not sit well with someone who has an existing extra class
license. Contrary to popular belief, I got my extra class ticket for the reason
that I needed it to operate in this part of the world due to the differences
in band plans between the U.S. and other countries in Asia. I didn't get it
to make myself feel I was 'better' than anyone else.

Although I have seen some yelling about the incentive method, I really don't
see any problem with it. I don't think we should just 'drop' the code testing
and let everyone on the entire HF spectrum, I think the 'work a little harder,
get a little more' program should be left in place. But I don't have a problem
with general class on HF with no code, as long as they don't operate packet
on 14.002.....

After the advent of the program which allowed the new hams on 10 meter SSB, from 28.300 to 28.500, I honestly can say I noticed a difference in the SOP above 500 and below 500.

The 'old guys' vs. the 'new guys' isn't anything new. It was going on in the 70's when I started and probably long before that. It's part of the program. I think you would get a lot less resistance and possibly a few more converts if you made it clear that the no code HF proposal included a place for the old guys to go hide when they wanted to, and you wouldn't be 'giving away' all the privledges that some of the old guys feel that they have earned.

Before the 'HF ghetto' discussion starts, what I am trying to say is that some days I don't mind talking to Mr. Smith's fourth grade class on HF and telling the kids about Guam for an hour and then mailing them maps and QSL cards. But other days I just want to go work some DX, without any fourth graders calling CQ on top of the pileup. Everybody needs some time to get 'up to speed' and I think an exclusive place to do that is good idea.

Anyway, I might sign off on a no code general, if the senior citizens still had some place to go on their own. But then again, when I sober up in the morning and the drugs wear off, I might change my mind again.

>
>I was a bit puzzled by the focus of the survey. Why cw vs. no-cw as
>THE pressing issue to bring before WARC?

Because the lack of growth, particularly in terms of the number of technically-inclined folks who are turned off/away by the CW requirement is the biggest threat to the future of ham radio.

>Are we satisfied with the
>concept of incentive licensing, as administered by VECs, with multiple
>choice question pools that very young children can memorize? Is IT a
>world-wide issue? As I recall, incentive licensing was supposed to
>promote proficiency by dangling exclusive band segments as a carrot.

No, I'm not ... and I don't think many are ... all the current scheme "promotes" (forces) is an increasing proficiency in CW "skills."

>Well, technology has changed a bit in the last couple of decades.

Technology per se HAS changed ... unfortunately, for the most part, ham radio technology HAS NOT. We're still using (and insisting on, and being driven by outdated regulations to use) outdated technologies.

>
>IF we need to make class distinctions among hams, I think interest in
>modes, bands, activities, etc. should be explored as a criterion for a
>way of spreading out the congestion on the air.

"Spreading out the congestion on the air" is NOT a legitimate reason for balkanizing the ham community ... if there's congestion, we need to exploit modern, technical solutions to increase our efficiency of spectral use to eliminate/control it ... not politically hamstring our ability to improve, explore, and experiment with new techniques.

>How about 3 basic
>classes of licenses (novice, tech, advanced, or whatever) with
>endorsements for cw, packet, ssb, EME, ...? The commercial licensing
>system uses endorsements.
>

More balkanizing ... I agree with Gary's recent post AGAINST anything but ONE license class. If people want some sort of proficiency endorsement certificate (another form of "wallpaper") that would be something that the ARRL could provide ... just like DXCC and the myriad

of other ego-gratification certificates that they currently offer.

>I'd hope that we would forever stay away from anything that smells of
>type-accepted appliance operating as a distinction from our unique
>privilege of homebrewing.

Agreed ... this will simply raise the cost of commercially-produced equipment DRAMATICALLY and limit the experimenter's freedom to experiment. We have far too many regulations that encompass the latter already.

>Also, years of experience or "service"
>doesn't make much sense as a criterion, and not just from the
>neuron-depletion effect. Just because I've driven a car for 35 years,
>that doesn't say anything about whether I'm a capable, courteous and
>responsible driver.
>

Neither does a mandatory CW test serve as a "lid filter" ... that's painfully obvious by listening to the bands ...

>I am afraid that the League is focusing on the minutae, with the cw
>issue at the forefront. Yes, it has to be addressed, because it is an
>international treaty stipulation.

I agree with the second statement, but not the first ... the CW issue is NOT "minutae" (sic) ... it is THE most important issue we need to address for the future of ham radio.

>I'd like to see more thought put
>into how we can continue to cope with the pressures of accelerated
>growth in numbers of licensees competing for bandwidth, and the
>attendant need for more commercializaton to "keep our numbers up".

This a technical issue which demands technical solutions, NOT political ones ...

3053. WA State Patrol Wants to Approve all vehicle radios

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-14 00:00:00 UTC
From: kc7iay@ibm.net
Message-ID: <Dxq8vx.C0E@eskimo.com>
Source record: 216882

=-

The Washington State Patrol has proposed the adoption of a Washington Administrative Code regarding wireless communications systems used by motorists.

The proposed WAC: [new section]: "WAC 204-10-045 Wireless communications systems. Hands-free, wireless communication systems may be used by motorists while driving a motor vehicle. Listening devices that include an earpiece shall cover only one ear. Wireless communication systems must be approved by the Washington state patrol equipment review unit."

There will be a hearing held on October 9, 1996 at the General Administration Building at the State Patrol's Commercial Vehicle Division Conference Room, Ground Floor at 9am. Written comments should be sent to:

Carol I. Morton, Administrative Assistant
Equipment and Standards Review Unit
Box 42635
Olympia, WA 98504-2636
360-412-8934

-=-

Comment by Bruce Miller:

There are three distinct parts to this proposed WAC: 1. Hands-free wireless communication systems is approved. 2. Listening devices attached a wireless communication system. 3. Approval of wireless communication systems.

There are several aspects of this proposed WAC that bother me.

There is no definition of "communication system" in WAC 204 or in the RCW (Revised Code of Washington) that I could find that pertains to this WAC. This means the WAC would apply to receivers and transceivers.

Note that there is no qualifying adjective before "wireless communication system" to restrict it to hands-free or two-way; it covers ALL wirelss communication systems.

Consequently, this proposed WAC can be interpreted to include receivers and transceivers, giving the Washington State Patrol the sole authority to determine what type or brand of radio equipment you could use in your vehicle--be it for am/fm, ham, CB, commercial, or cell phone, paging.

-=-

Here is some background info on the Commission on Equipment from the Washington Administrative Code and from the Revised Code of Washington.

WAC 204-08-010 Definition.

>> CITESEARCH <<

20408010

Whenever used in this title "commission," "commission on equipment," and "state commission on equipment" means the chief of the Washington state patrol.

[Statutory Authority: RCW 46.37.005. 87-16-032 (Order 87-01-ESR), 204-08-010, filed 7/27/87; 78-08-078 (Order 7760), 204-08-010, filed 7/27/78; Rule I, filed 3/21/60.]

RCW 46.37.005 State patrol--Additional powers and duties.

>> CITESEARCH <<

4637005

In addition to those powers and duties elsewhere granted, the chief of the Washington state patrol shall have the power and the duty to adopt, apply, and enforce such reasonable rules and regulations (1) relating to proper types of vehicles or combinations thereof for hauling passengers, commodities, freight, and supplies, (2) relating to vehicle equipment, and (3) relating to the enforcement of the provisions of this title with regard to vehicle equipment, as may be deemed necessary for the public welfare and safety in addition to but not inconsistent with the provisions of this title. The chief of the Washington state patrol is authorized to adopt by regulation, federal standards relating to motor vehicles and vehicle equipment, issued pursuant to the National Traffic and Motor Vehicle Safety Act of 1966, or any amendment to said act, notwithstanding any provision in >> Title 46 << RCW inconsistent with such standards. Federal standards adopted pursuant to this section shall be applicable only to vehicles manufactured in a model year following the adoption of such standards.

[1987 c 330 706; 1985 c 165 1; 1982 c 106 1; 1967 ex.s. c 145 56; 1967 c 32 49; 1961 c 12 46.37.005. Prior: 1943 c 133 1; 1937 c 189 6; Rem. Supp. 1943 6360-6; 1927 c 309 14, part; RRS 6362-14, part. Formerly RCW 46.36.010.]

I agree to an extent ... if it's all you say, it's simply "final assembly" and doesn't merit as much "credit" as "design-from-scratch" projects. We definitely need more of the latter, though there IS a lot of that going on ...

> If
>the entry point became nothing less than some digital rig, it'd be the end of
>real homebrew and we'd all become module pluggers and appliance users, without
>any real understanding of the foundations.

I don't understand why you assert this ... it's quite possible to start from scratch and design new and wonderful things quite digital ... you take a uP, some RAM/EPROM, some gates, PALs, etc. and build it up (wire-wrap or PCB) ... then you interface it to your PC and voila!

>We would encounter few of the real,
>physical difficulties. One could argue that the TX could still be developed
>and thence tied to the computer. But the price of the project would jump from
>a few tens of $'s to at least a few hundreds of $'s, with the complexity going
>up significantly - thus making the entry point much more expensive and more
>difficult.

Again, I find your argument unconvincing ... uPs are cheap ... I just eliminated over $30 in parts cost on a design I'm responsible for at work by ADDING two *two dollar* microcontrollers to replace some things that were originally designed in a rather backward fashion. (I "inherited" the poor design from a predecessor and was tasked with 1st making it work (which it didn't, now it does), then cost-reducing it (which I'm doing)).

>
>I recognise there are many occasions when using monolithic or integrated
>devices is mandatory. However, I think it is a poor starting point as no gut
>feel for the device's operation is aquired (IMO, of course). If you do have a

>use of the integrated devices.
>

Try building a UHF radio with some of the highly-integrated GaAs or silicon MIMIC "building blocks" that are available today, then tell me that ... if you don't have a "gut feel" for the underlying science, you'll develop/learn it fast, or you'll never get them to work.

Mike,

You're twisting things again ... I never said that nobody who is technically inclined or proficient enjoys CW ... I simply said that there were many, many who don't find it interesting or appealing in the least ... in fact, they find it backward ... and that because of that, they don't get into ham radio.

>I think there will always be CW
>

Garrie,

Thanks for making that point again ... it's something the pro-CW folks choose to ignore.

I have NEVER, EVER, in over ten years of debating this issue, seen a no-code advocate actually advocate the *banning* of CW from the bands. Not once. (of course, now that I've said that, one of the pro-coders will probably start up a phony "ban the code" thread in an effort to taint the discussion with a bunch of bogus anti-no-code distortions).

Ed,

Actually, I could care less what he thinks of me ... however, I do despise and resent the mentality, held by so many "holier-than-thou CW ops" that says "no-code techs are ignorant and unworthy of having or expressing opionions."

That is patently false ... there are MANY no-code techs who are good operators and technical professionals ... there are also, a LOT of "Amateur Extra Class" hams with big egos who don't know squat about how their radio works, how to tell if there's something wrong with it, how to fix it if there is womething wrong with it, etc. ... right down to the ones who don't even know Ohm's Law.

From my point of view, the knowledgable, courteous no-code tech's opinion is of FAR more value than those of the ignorant, ill-mannered 20wpm+CW lids who jam and curse on 14.3xx and other places throughout the HF bands.

What's your opinion on this, Ed? (others, please chime in, too)

Dana,

I have to disagree with you on this one ...

In Washington, "the squeaky wheel gets greased" ... if we don't voice our opposition, we'll lose. We HAD to file comments with the committee. I see no difference in sending 1000 protest letters/comments via e-mail vs via snail mail.

The committee members have an obligation to consider ALL the viewpoints presented by the public on issues such as this. Whether they come in via e-mail or snail mail is irrelevant.

I see NO "foul" in sending the coments via e-mail.

It's not a question of "net manners" ... it's a question of participation in the regulatory process. Even "netizens" have the right to participate and be heard.

The committee should receive, handle, and consider ALL comments, both written and electronic, and I see no legitimate basis for complaining that electronically-filed comments are somehow inappropriate or "a burden" ...

>You mean you'd take the privilege of operating CW *away* from code-test
>free licensees?
>

It would, IMHO, be a *perfectly* acceptable trade-off if it were necessary to counter the argument from the pro-coders that no-code licensees were not "qualified" to operate CW ... this would actually be counter to one of the objectives of the pro-coders (to maintain the use of an antiquated technology that they enjoy using) ... the no-coders would, by and large, not care a bit abot being precluded from using something that they don't want to use anyway ... my proposal is an attempt to pander to their lack of objectivity on the subject :-)

The thing that will stop the pro-coders from accepting this proposal is that the no-coders would NOT be prohibited from using digital modes in "their CW sub-bands" ... which are, in fact, not "their CW sub-bands" at all, but more accurately the "everyone's non-SSB sub-bands".

I even threw in the idea of a 25kHz "CW only" sub-band at the bottom of the bands to "sweeten the pot".

How would you know? You wouldn't recognize it (or hear it for that matter). Actually, spread spectrum would be an ideal mode for moonbounce ... spread your signal over the entire 70cm band, transmit low rate data and take advantage of something on the order of 40-50dB of processing gain ... could knock the hell out of the amplifier and antenna requirements ... "libration fading" ??? WHAT libration fading?

More pro-CW fantasy malarkey ... OK, so I can build a one-transistor CW transmitter the size of a postage stamp ... SO WHAT? ... I can build a complete digital station that's sufficiently portable and provides much more convenient, reliable communications.

If I were interested in nostalgia, I'd be interested in CW ... I'm not, I'm interested in efficient, effective communications.

Nov/Tech Classes -Lindenhurst

Subject: Great South Bay Amateur Radio Club Amateur Radio Classes

NOVICE / TECH CLASSES - 2 hours theory & 1/2 hr. code

The Great South Bay ARC has scheduled Novice/Tech classes beginning
on Wenesday September 11, 1996. Classes start at 7:30 PM and
will continue to 9:30 PM every Wednesday for approximately 14 weeks.

All students must have the new version (Blue Cover) of the
publication "Now Your Talking..." which is available at a local
Radio Shack or from the ARRL, 225 Main St., Newington CT 06111.

ADDITIONAL INFORMATION

All classes are located in the basement of Babylon Town Hall,
200 E. Sunrise HWY, Lindenhurst NY in the Emergency Operations Center
(ARES/RACES Room), access is gained via the door at the bottom of the
stairs at the rear of Town Hall.

If you are interested in attending a class or you know someone who is,
have them contact Tom N2MIG 957-9585 for further information or just
come on down to class. The class instructors are Walter KA2RGI and
Dave N2UHR.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 pm on the WB2FKZ repeater, 146.685 -600 4Z(136.5)
PL required. You may also write to:

==========
BUT - those sections of the band reserved for non-phone uses shrink as
more and more phone operators crowd the remainder. In the '50's, 75
meters was only 200 kHz, and there was no phone on 40 at all!

I suspect that in 20-30 years, there will be no parts of the band
reserved for non-phone usage. It will all then be by "gentlemens
agreement".

3071. RF "Hazards -- The Milham Study

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-14 00:00:00 UTC
From: "Leland S. Van Koten" <vankoten@ix.netcom.com>
Message-ID: <51es3b$74o@dfw-ixnews3.ix.netcom.com>
Source record: 216900

Several postings on this Newsgroup have referenced an article authored by Milham and published in the American Journal of Epidemiology in 1988, which reported an excess of acute leukemia and lymphatic cancer among amateur radio licensees. I got a copy of the article from a local medical school library this week, and it's difficult for me to believe that anyone would regard it as reasonable evidence that RF exposure poses any cancer risk.

While there was an excess of lymphatic cancers and acute leukemia, there were significantly LESS (1) total deaths, (2) total cancer deaths, (3) deaths from cardiorespiratory disease, and (4) accidental deaths, than would be expected in a group of similar age.

Milham suggested that the reduction in overall mortality, overall cancer mortality, and cardiorespiratory mortality might be explained if hams were less likely to be cigarette smokers than the typical male of the same age. That obviously wouldn't explain the striking reduction in accidental deaths, however, and Milham didn't even attempt to provide an explanation.

It seemed to me that if you could understand the reasons for the reduction in accidental deaths (especially among a group noted for doing things like climbing towers), you might have a clue as to the reasons for the excess leukemia and lymphatic cancers.

Guess what? Although the death rate from most causes of death (including accidents, most cancers, and cardiorespiratory disease) tends to be higher among lower income people, at least two kinds of cancer -- acute leukemia and lymphoma -- are for some reason actually more common among people of higher socioeconomic status. (I'll be happy to provide citations to anyone who is interested.)

I suspect that all Milham's study REALLY proved is that the average ham has a somewhat higher income than the average person of the same age -- which would hardly be surprising to anyone who has ever priced amateur radio equipment.

The squeaky wheel gets greased when applied to elected officials.
I don't believe any of the committee that had their e-mail addresses
mail bombed were elected. To an appointee or civil servant, abuse
is simply an excuse to rake the abuser over the coals in retalliation.

> The committee should receive, handle, and consider ALL comments, both
> written and electronic, and I see no legitimate basis for complaining
> that electronically-filed comments are somehow inappropriate or "a
> burden" ...

Most politicians can recognize a form letter when they see one. They
realize that it rarely means a strong opinion as someone is simply
following the directions of others instead of taking their own
initiative. What the ARRL did smacks of a form letter. How different
do you think the respondants were? Plus the committee members
certainly knew that the ARRL had advocated writing. I believe
the ARRL screwed up on this one and hope it doesn't hurt us in
the decision making process.

There is no evidence to support this claim.

Do you have any evidence that shows the number of technically-inclined people getting involved in amateur radio has decreased? Then, do you have any evidence that has regressed out >all other factors<, such as the fact that people have less and less spare time for hobbies and leisure activities?

>Technology per se HAS changed ... unfortunately, for the most part, ham
>radio technology HAS NOT. We're still using (and insisting on, and
>being driven by outdated regulations to use) outdated technologies.

Poor us. We're not a consumer, mass-market-driven radio service. I'm sure Carl's employers are really disappointed they can't sell some hams on the latest wizz-bang radio setup.

>"Spreading out the congestion on the air" is NOT a legitimate reason for
>balkanizing the ham community ... if there's congestion, we need to
>exploit modern, technical solutions to increase our efficiency of
>spectral use to eliminate/control it ... not politically hamstring our
>ability to improve, explore, and experiment with new techniques.

Translated: buy our latest wizzz-bang techno-gadget.

>something that the ARRL could provide ... just like DXCC and the myriad
>of other ego-gratification certificates that they currently offer.

This, coming from the man who sez that amateurs are a "bunch of geeks that know less RF theory than I've forgotten on a single day."

>Neither does a mandatory CW test serve as a "lid filter" ... that's
>painfully obvious by listening to the bands ...

No filter is perfect. However, all I have to do is listen to 27mhz to know that the "CW filter" is working quite well, thank you.

>This a technical issue which demands technical solutions, NOT political
>ones ...

Problems within amateur radio are reflective of other societal problems,
and require societal solutions, not Mr. Gadget.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 925 8 SEPTEMBER 1996

This is the Australian National Amateur Radio Teleprinter Society,
with our weekly RTTY broadcast. We transmit the cast each week on
the following frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)
7.045 MHz -3 0030 UTC VK2CTD (COL)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)
14.091 MHz 0030 UTC
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2WI
146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Enquiries to the society should be addressed to the Secretary
A.N.A.R.T.S., PO Box 860, Crows Nest, N.S.W. 2065.

A.N.A.R.T.S. News Bulletin 925 8 SEPTEMBER 1996

COLS COLUMN

SOME TIME AGO ANARTS WAS GIVEN A FLOPPY DISC BY FRANK VK2FJL.
IT CONTAINED COMIC STORIES THAT HE HAD COLLECTED ON RTTY. I
CANNOT FIND MANY OF THE STORIES THAT RELATE TO RTTY OR EVEN
AMATEUR RADIO, BUT I THOUGHT YOU MIGHT LIKE TO READ THIS ONE
ABOUT A DXER.....OVER TO FRANK.

BE WARNED...IT COULD HAPPEN TO YOU...

A CONFIRMED LIFELONG DX FANATIC, HAVING SADLY DEPARTED THIS
LIFE FINDS HIMSELF IN HADES BEING INTERVIEWED BY THE DEVIL.
OPENING THE CONVERSATION, SATIN SAID 'PEOPLE ON EARTH LIKE
TO BELIEVE THAT THIS IS A TERRIBLE PLACE, BUT THAT REALLY
ISN'T SO. HERE YOU CAN HAVE ANYTHING YOU LIKE - GIRLS, GROG,
SPORTS CARS ANYTHING AT ALL, SO WHAT IS YOUR WISH?'

THE DX'ER WAS ASTOUNDED, BUT QUICKLY REGAINED HIS
EQUILIBRIUM. 'WELL,' HE MUSED, 'MY ONLY REAL INTEREST FOR MOST
OF MY LIFE HAS BEEN WORKING DX ON AMATEUR RADIO. THE THING I
ALWAYS WANTED AND COULD NEVER AFFORD WAS A 300 FOOT TOWER,
COMPLETE WITH A PERFECTLY MATCHED HIGH GAIN BEAMS TO COVER
ALL BANDS. THE BEAMS WOULD BE FED WITH ZERO LOSS COAXIAL

CABLE THROUGH THE PERFECT COAX SWITCH BUT I DON'T SUPPOSE
THAT WOULD BE POSSIBLE, EVEN HERE?'

SATAN GAVE A LITTLE SMILE, AND SAID 'NO WORRIES O.M HERE
NEARLY ALL THINGS ARE POSSIBLE, WE'LL FIX THAT IN A FLASH.'
WHICH HE DID. PUFF OF SMOKE, AND THERE STOOD THE DXER'S
DREAM COMPLETE TO THE LAST DETAIL, EVEN INCLUDING THE
ROTATOR HE'D FORGOTTEN TO ASK FOR. COMPLETELY
FLABBERGASTED, HE STARTED TO STAMMER HIS GRATITUDE BUT SATAN
CUT HIM SHORT. 'LOOK MATE', SAID SATAN 'THAT WHOPPING GREAT
TOWER IS NO GOOD TO YOU WITHOUT SOME GEAR TO GO WITH IT, WHAT
WOULD YOU LIKE, NAME IT AND IT'S YOURS'

AFTER HE HAD REGAINED HIS COMPOSURE OUR DXER THOUGHT ABOUT
ALL THE ARTICLES AND REVIEWS THAT HE HAD READ, AND PROCEEDED
TO NAME EVERY PIECE OF GEAR THAT HE HAD DROOLED OVER. WHEN THE
LIST HAD REACHED IT'S END, SATAN SMILED AND SAID
'NO PROBLEMS THERE, WE'LL FIX THAT IN A FLASH'.

PUFF OF SMOKE, AND EVERY SINGLE PIECE OF GEAR ON THE
LIST APPEARED AND EACH PIECE ABSOLUTELY BRAND NEW, NOT ONLY
THAT EACH PIECE OF EQUIPMENT WAS MOUNTED INTO THE MOST
BEAUTIFUL OPERATING CONSOLE EVER SEEN.

'THOUGHT THAT YOU WOULD LIKE THE JOB DONE PROPERLY' SAID
SATAN. THE DXER WAS AMAZED AT THE DEVIL'S HANDIWORK, AND
AFTER EXPRESSING HIS THANKS SAID 'CRIKEY, I CAN'T WAIT TO GET
ON AIR AND TELL THE FELLA'S BACK THERE HOW GOOD HADES REALLY
IS. BUT TELL ME SATAN WHAT IS THAT DIRTY GREAT CABLE HANGING
OUT THE BACK OF THE CONSOLE.'

AH, THATS THE POWER SUPPLY CABLE FOR ALL THE EQUIPMENT.'
REPLIED THE DEVIL.

'WELL THEN, LETS PLUG IT IN AND I'LL GET CRACKING.' EXCLAIMED
THE DXER.

THE DEVIL SMILED, LOOKED AT THE DXER AND SAID...
'SORRY O.M BUT WE HAVEN'T ANY ELECTRICITY DOWN HERE'.....

NO MORE FOR NOW SEE YOU NEXT WEEK DE COL VK2CTD

OLD TIMERS IN W.A.

THE NEXT MEETING OF THE W.A. RAOTC WILL BE ON TUESDAY 10TH
SEPT. AS YOU MAY KNOW THE RAOTC KINDLY RELAYS OUR BROADCAST IN
PERTH. THEIR NEXT MEETING IS A SPECIAL ONE TO CELEBRATE THE
BIRTHDAY'S OF GEORGE MOSS (VK6GM) 93 YEARS YOUNG, AND FRED
HULL (VK6FH) WHO WILL BE 90 YEARS YOUNG. ANARTS WOULD LIKE TO
WISH THEM BOTH A VERY HAPPY BIRTHDAY. THE RAOTC IS HOPING THAT
EITHER THE FEDERAL PRESIDENT AND THE VK6 PRESIDENT OF THE WIA

WILL BE IN ATTENDANCE.

THE ANARTS CAST PLUS LOCAL NEWS HAS BEEN TRANSMITTED FOR SOME YEARS BY CLEM VK6CW UNDER THE CALLSIGN OF VK6TTY. THE VK6TTY LICENCE WILL EXPIRE ON THE 1ST NOMBER THIS YEAR AND THE LAST BROADCAST USING THAT CALL WILL BE ON SUNDAY THE 15TH SEPTEMBER. CLEM VK6CW IS CEASING OPERATION AFTER MANY YEARS DUE TO PRESSURE FROM OTHER ACTIVITIES. AGAIN ANARTS WOULD LIKE TO THANK CLEM FOR HIS EFFORTS OVER THE YEARS AND WE HOPE OUR ASSOCIATION CAN CONTINUE.

LARRY VK6CP HAS VOLUNTEERED TO RUN AN R.T.T.Y. MAILBOX ON 144.600 USING THE CALLSIGN VK6TTY...IT IS PROPOSED IF NO ONE HAS ANY OBJECTIONS, TO TRANSFER THIS CALL SIGN FROM VK6 RAOTC TO LARRY FOR THIS RTTY MAILBOX ACTIVITY..... SO HOPEFULLY THE VK6 STATIONS WILL STILL RECEIVE THEIR CAST EACH SUNDAY. WELCOME LARRY VK6CP.

PROVIDED THERE IS ROOM IN NEXT WEEKS BROADCAST, WE HOPE TO BRING YOU AN INTERESTING ARTICLE BY CLEM VK6CW, IT CONTAINS HIS INITIAL THOUGHTS ON HF CLOVER AFTER RECENTLY ACQUIRING A CLOVER MODEM. IT MAKES INTERESTING READING.

RTTY REPEATER/MAILBOX

THE SYDNEY REGION HAS A RADIOTELETYPE REPEATER, VK2RTY, ON 146.675 MHZ (OFFSET DOWN), WITH AN ATTACHED MAILBOX, WITH A BAUD RATE OF 45.45 BAUD, VARIABLE BY COMMAND ONCE ONE HAS ESTABLISHED CONTACT.

TO FIND OUT TO USE THE MAILBOX, ONE SHOULD CALL UP ON THE REPEATER USING THE COMMAND ".?" FOLLOWED BY (NEW LINE) "DE VK2..." (YOUR CALLSIGN). IF THE REPEATER DOES NOT RECOGNISE YOU AT FIRST, TRY A LINE OF RYS BEFORE THE COMMAND (RETURN) DE CALLSIGN. THE REPEATER HAS A BETTER CHANCE OF LOCKING ONTO A WEAK SIGNAL IN THIS WAY. THE LOCATION OF THE REPEATER IS AT BLACKTOWN.

A SHORT LIST OF COMMANDS WILL BE GENERATED BY THIS COMMAND, WITH THE FULL LIST NEEDING ".HELP" AS A COMMAND.

AS THIS IS ALSO A REPEATER, FEEL FREE TO HOLD QSOS WITH YOUR FRIENDS, SEND RTTY PICTURES, OR LISTEN TO THE ANARTS BROADCAST WHICH GOES OUT TWICE ON SUNDAYS.

TIMES ARE 0030 UT AND 0930 UT. BEING UTC TIMES, THE BROADCASTS ARE INDEPENDENT OF LOCAL DAYLIGHT SAVING TIME -- YOU JUST HAVE TO REMEMBER THAT IN THE SUMMER THEY ARE A LOCAL HOUR LATER!

FREQUENCIES ARE: 3,045 MHZ +/- 5 0930 UTC
7.045 MHZ -3 0030 UTC
14.070 MHZ AMTOR/FEC 0030 UTC

146.675 MHZ 0030/0930 UTC

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(30 AUGUST - 05 SEPTEMBER)

ISSUED ON 06 SEPTEMBER 1996

SUMMARY
Date 30 31 01 02 03 04 05
10cm 73 76 74 72 71 71 70
A 17 13 6 5 3 9 (7 estimated)
T 4 25 12 15 13 13 11

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO ACTIVE ON 30TH AND 31ST AUGUST; QUIET 1ST AND 3RD SEPTEMBER; AND QUIET TO UNSETTLED ON OTHER DAYS.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE 15 TO 30 PER CENT DEPRESSED 0100 TO 0700 UT. FREQUENCIES RECOVERED DURING LOCAL NIGHT. ON 31ST AND 1ST, FREQUENCIES WERE ENHANCED TO 30 PER CENT, AND 15 PER CENT ENHANCED ON 2ND, THEREAFTER NEAR PREDICTED MONTHLY VALUES.

FORECAST (06 SEPTEMBER - 12 SEPTEMBER)

GEOMAGNETIC: QUIET TO UNSETTLED.

FREQUENCIES: NEAR NORMAL PREDICTED MONTHLY VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

VK2SG RTTY DXNOTES FOR WEEKENDING AUGUST 30, 96 (BID RTDX0830)

IF THIS WEEK DX NOTES APPEAR SCARSE, MY APOLOGISE, I WORK FROM MY RESORT QTH AND CAN REPORT ONLY WHAT RECEIVE. FURTHERMORE I'M ON VACATION AND TIME IS NOT ONLY FOR RADIO. ANOTHER PROBLEM IS THE LINK WITH MY PACKET BACKBONE STATION WHICH FROM HERE DO NOT EXIST.

OUR THANKS THIS WEEK GO TO:ZS5S, W2JGR, WB2CJL, W5KSI, AA5AU, N5PSI, S92ZM, TL8MS, JA3MHV, DF2KU, SP4KM, PA0HVF, IK1CJO, I5KG, I5IGQ, I5KKW, I1JQJ AND THE 425 DXGANG, DJ3IW AND THE CENTRAL-EUROPE DXCLUSTER DB0SPC THE NJ0M NODE OF MINNESOTA AND THE IK5PWJ CLUSTER.

From: desmith@telalink.net
Message-ID: <51cs3s$h06@apple.telalink.net>
Source record: 217002

author@poboxes.com (Ryan) wrote:

>...was wondering what classes there are and whats the difference between them?

The major classes of amplifier:

A: The active device (tube/transistor) conducts over 360 degrees of the incoming RF cycle. (in other words, all the time) A DC ammeter in the power supply circuit will read the same current regardless of the RF power output. Very linear, but also very inefficient since it draws the same amount of DC when there's no RF to amplify as it does when operating at full RF output. Probably impractical for an amateur linear, used primarily for low-level audio and RF amplifiers.

B: The active device conducts over 180 degrees of the incoming RF cycle. (half the time) A tuned circuit (RF) or "opposing" device (audio) supplies the other 180 degrees. Fairly linear, though there can be some "crossover distortion" in audio when the "opposing" device doesn't take over in time, or takes over too early. Not quite linear enough for use on the air, but common (in push-pull configuration) for audio, especially in the old tube days. Efficiency about midway between classes A and C.

C: The active device conducts over less than 180 degrees of the incoming RF cycle. A tuned circuit (RF) supplies the rest of the cycle. Class C is very non-linear, and unacceptable for audio unless you like distortion. It's not acceptable for amplitude-modulated RF signals either, as it'll add the same distortion. (SSB is a form of AM) It is, however, acceptable for amplifying RF signals whose amplitude doesn't change -- CW or FM. This is the most efficient class, as DC power is only used when there's RF to amplify.

AB: A comprimise between classes A and B. The most popular class for amateur linears.

There are other classes (I've heard of D and E) used for audio only. I'm not familiar with them and not sure whether they're generally accepted by engineers, or simply inventions of the marketing department.

In a nutshell.. If you intend to amplify an AM, SSB, SSTV, or ATV signal, you want a class AB amplifier. If you intend to amplify a CW or FM signal, any class will work, but C will be most efficient.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, K1EFI, N1REU, K4UTE, KQ4GC, W4BRE, KH6BZF, WB6VGI, KA7YAO, WA9BXB, K9WR, A35RK, DL5EBE, DL8HCO, F6AJA, G3SXW, G4BUE & the DX News Sheet, PA3DZN, VS2BG and ZL2AL following DX information.

3E, PANAMA (SPECIAL PREFIX). Gunther, HP1XVH, currently active on IOTA NA-072 (ed. Island was not provided) states he will be using the special callsign 3E1DX, October 20-31st during the CQWW Contest. QSL via KF0UI (John in Missouri).

5V, TOGO (UPDATE). The Voodoo Contest Group which will be active from here in November (read OPDX.261) has announced their new 5V5A Web Site page for the upcoming expedition to Togo in West Africa. The site is at: http://www.getnet.com/~kf7ay/5v5a.html
The WWW page has details on the team of ten who will enter the CQ World-Wide DX CW Contest on November 23-24th from Togo signing 5V5A. Six stations will be active along with 17 antennas on the hotel roof to enter as a Multi/Multi entry. The page also contains information about previous expeditions, the WW contest, operating site, transportation and logistics, their QSL routes (including bureau requests via e-mail), tips on making a QSO in the contest, best times and bands to work Togo from each major area, and much more. The expertise of Dr. Warren Hill, KF7AY, who constructed the page provides many photographs, maps, QSL cards, interesting details and graphics. As the project unfolds, they will post updated news items to the "Flash" section every few days. Please feel free to visit the site from time to time to stay in touch.

5R, MADAGASCAR. Jean Michel, F6AJA, is back in France after his 5R8FI operation and says he will have his QSL cards printed as soon as possible. He also mentions that Gerard will stay there, as 5R8EN, until the middle of October and can continue to make QSOs on RTTY. Jean has the 5R8EN logs up to September 7th (with the 5R8EN/P logs from Nosy Be) and is preparing a short 5R8EN/P story.

5X, UGANDA (On RS-12). Peter, 5X1T (ON6TT), reports he has some windows to work him on the RS-12 satellite (+/- 1900-2000z) for the next couple of days. Peter states the window only covers him and Europe.

A35, TONGA (UPDATE). Paul Kidd, A35RK, reports his station is down now on Nuku'alofa, in preparation for departure for Lifuka Island this coming Tuesday (17 Sept). He will resume operation (probably around October 1st), it will be from the village of Holopeka, Lifuka Island, Ha'apai Island Group (IOTA OC-169). His QSL Manager is still W7TSQ (via his CBA or via W7 buro). Paul wants me to tell the OPDX readers that the A3 QSL Bureau is now totally defunct...and he is not even sure if they have a Post Office Box anymore. Also, Paul states: "Don't waste your time and money sending cards to the A3 buro. I don't know where the incoming cards are....All I can tell you for sure is that I don't have them, and I don't know where to get them. If you work an A35 station, get his QSL info, because that's the ONLY way you're gonna get a card!"

D2, ANGOLA. Alex, PA3DZN (aka WH2L, 9Q2L, TR2L, 9X5EE), expects to be active in early October from Luanda for a duration of a minimum of 6 months. He plans to use his TS-50 and R7 (10 - 40m), but a Force-12 C4 beam and a 600W amplifier will be shipped to Luanda as well. For 80 and 160 meters, he will try to install the usual wire antennas, the environment permitting. Operation will be on CW, CW, CW, RTTY, and SSB. QSL information "TO BE ANNOUNCED". (Please do not assume any of his previous QSL routes for other operations). The callsign "TO BE ANNOUNCED"; upon arrival, after he sorts some things out with the PTT.

FP, ST. PIERRE ISLAND (ed. This one may be just a tad earlier...HI!). Jack, N1REU, announced plans to activate this one the 3rd week of August 1997. He doesn't have an op list, but he is working on it. If you have any questions or comments about his plans, just please E-mail Jack (n1reu@contesting.com). He mentioned that these are just preliminary plans, no definates yet, but he will keep an up-to-date list of plans on a WEB page for the expedition. The address will be: http://www.cris.com/~Jackhamm/FP.html

HI, DOMINICAN REPUBLIC. Be on the lookout for Niki, DH2JD, to be active as DH2JDX/HI3 for the next three years. His activity will be mainly on the weekends at 1830z on 14272 kHz running.

IOTA NEWS. Tony, WF1N, and LOU, KA1DIG, will be on Appledore Island (NA-148, Isles of Shoals), September 20-23rd. Activity will be on or near the IOTA frequencies. They will pay special attention to 40 meters: 7160-7190 kHz (Listening down for DX) and 7260-7290 kHz (for USA). QSL direct to home calls or via bureau.

J3, GRENADA (Need another operator). IV3NVN, IV3TMV, W8KKF, W9IXX, WA8LOW and WB8GEX will be active from October 23-29th. The group will be active as J3A in the CQWW SSB Contest and is looking for another operator. Contact Harry, W8KKF, at 513/434-9616. Also it is reported that Joe, WB8GEX, is planning to install a beacon for 6 meters with 2.5 watts. QSL J3A via WA8YOW.

JD, OGASAWARA. Eiji, JQ1SUO, has announces that he will be active from here December 16th to January 3rd as JQ1SUO/JD1. His operations will be on: CW - 1909-10, 3505, 7005, 10107 and 14025 kHz and SSB - 3795, 3800, 7050, 14240 and 14200 kHz. He will look for USA stations between 2200 and 0000z on 14240 kHz. QSL to CBA.

KG4, GUANTANAMO BAY. Bill, KG4GC (KQ4GC), and Jan, KG4QD (WA4VQD), will be active September 27th to October 4th. They will be active on all bands to include SSB, CW and RTTY. Bill and Jan will join Rusty, KG4AU, as a Multi/Single high power entry in the CQWW RTTY Contest September 28-29th. Contest call will be KG4GC. QSL with SASE to home calls.
Also, Larry, WB6VGI, is currently active as KG4ML until September 24th or 25th. He is using a TS-50 and operating primarily on the WARC bands with brief excursions to 40/80 meters CW when WARC bands are down. He has no plans on operating on the other bands except to chase down new countries for his DXCC from there.

KH7 CONFUSION (not Kure Island!). Lee, KH6BZF, wants to remind OPDX readers that the FCC has started issuing KH7 licenses to Hawaiian Amateurs. KH7 callsigns have been appearing on the bands in the last week or so.

KP2, U.S. VIRGIN ISLANDS (Operator Needed). The Clay County DX Assocciation (CCDXA), located in north Florida, will be Multi/Single entry in CQWW SSB this October from St. Croix. At present time they have five operators (KD6WW, KQ4GC, AE4FY, AB4NS and KX8N). There is room for one more!!!
If you would like to go or receive more information please call, Bill KQ4GC, at 904-282-9925.

OZ, LAESOE ISLAND (North-Denmark). DL8HCO, DJ9RR, DH1LAD and DK7XS will be activate from EU-088, October 6-11th. Operations will be on all bands CW/SSB. Check the IOTA frequencies. They plan to be active around the clock. Callsigns are OZ/Homecall and QSL via bureau or direct.

QSL INFORMATION AND NEWS....
Rich, WA9BXB, has been recently getting cards for TI1C, TI2CF and TI4CF. He is not their manager and he was told by two people that he is listed in the new Callbook CD Rom as manager for TI1C which is incorrect. However, Rich is the QSL Manager for the following: VK3MO, TI2/N9IUO, TI2IDX and TI4IDX. Also, Rich states he is willing to manage another moderately active DX station that needs a manager. Rich is willing to pay for all QSL cards.

There has been a QSL Manager change in the upcoming ZV0MB and ZV0MV DXpedition. PT2DX was announced earlier as manager, but his address is not in the current callbook. So, to make things easier for DXers, PT2GTI was announced as QSL Manager for the Martim Vaz Island DXpedition. QSLs go to P.O. Box 09647, BRAS�LIA (DF), 70001-970. For more information on this DXpedition read OPDX.269.

LY2ZZ states QSLs for LY0HQ are to be sent to LY2ZZ.
The Danish QSL Bureau has changed their address to: E.D.R. QSL BUREAU, Klokkestoebervej 11, DK 5230 Odense M., Denmark.

Lee, ZL2AL, reports to OPDX, that they are still processing cards for ZL8RI DXpedition..... over 6000 direct mail QSLs have been sent out to date. Lee states, "It is a hard task, but every QSO is checked on CT and verified. QSLs will not be sent for non-existant QSOs! We ask all who worked us to please be patient. Every valid contact will be QSLed. Five of us are working hard and abusive letters by some hams do not help our frame of minds when we are burning the midnight oil. QSLs for ZL8RI are still via ZL2HU." Lee also mentions that he is the QSL Manager for ZL7AA 1993 operation and cards can be sent to ZL7AA, POB 54, Hastings, New Zealand.

Dan W4BRE, states that Carl, N4AA (of "QRZ-DX,"), has now completely caught-up with all USA requests (see exceptions below). He has now been answering requests, usually on the day they come in. Exceptions: There are several discrepancies where a station's call is not in the COMPUTER for a particular band/mode, etc. but this does not mean the station is "Not In The Log!!" Approx. 38,500 plus contacts were entered into the computer *after* the return to Kiev from Libya, so it's understanderable if a few didn't get entered. Carl should have his hands on the PAPER logs very soon and hopefully will be able to resolve most cases where he cannot find someone's call in the computer. ADDED NOTE: The complete news release by Dan will be sent to all OPDX InterNet subscribes.

VK0, MACQUARIE ISLAND. Warren, VK0WH, will be leaving on the next ship, so any mail should now go to his home address. He is presently snowed under with work and amateur radio will have to take a backseat for now. Warren currently has made 1200 QSOs with about 50 countries, but NO FEAR, another operator is on his way. VK0GW is reportedly to be with the next crew on Macquarie. Details about his equipment and operating times should be forthcoming.

VP5, TURKS AND CAICOS ISLANDS. The North Florida DX Association will be returning to Provo for the CQWW SSB Contest. They will arrive October 22nd and depart on October 29th. The callsign they will be using during the contest is VP5DX. Operators will be AB4UF, N4KE, NO4J, NF4L, W3ZNB, and K4UTE. QSL via K4UTE. PLEASE - NO QSLS via the VP5 Bureau, U.S. Bureau is OK via K4UTE. This will be a Multi-Single effort.

VP9, BERMUDA. Fred, K1EFI, will be heading here for his annual September vacation, and once again he will be operating as K1EFI/VP9 from Sandys Parish. Operations will be from September 26th to October 8th, mostly on CW, all bands. QSLs go to the home call.

VR96-VS96, HONG KONG (Special prefixes for Hong Kong). According to Brett, VS2BG (President of HART, the Hongkong Amateur Radio Transmitting Society), the Hong Kong Government Office of the Telecommunications Authority will be allowed to use several prefixes to commemorate the transfer of sovereignty over the territory from the United Kingdom to the People's Republic of China on 1 July 1997.
At the request of HARTS, Hong Kong amateurs will be allowed to change the numeral in their callsign to "96" in 1996, "97" in 1997 & "98" in 1998. Amateurs began the use of these new prefixes as of September 10th, starting

with a contact between VS96BG & VR96GO. HARTS will announce later the details of a new award to be offered to amateurs for contacting stations using these special prefixes.

W9DXCC DX CONVENTION (Review by KB8NW). The reason there was no bulletin last week, was because your editor (along with John, K8YSE) attended the 44th Annual 1996 W9DXCC Convention. This was John and your editior's first DX Convention. Both of us felt that the Northern Illinois DX Association put on a very good and well organized convention packed with forums, prizes (a lot of prizes... everyone went home with something) and a great program/dinner banquet. Both John and I will probably attend again next year. Here also are a few of my favorite highlights:

Jim O'Connell, W9WU, was a great MC throughout the day plus kept everyone laughing between forums.

Bob Heil, K9EID, talk on ZERO-Beating and other Audio Techniques.

Jim Riff, K9JSC, talk on the XR0Y and XR0Z DXpedition.

Wayne Mills, N7NG, (Dinner Banquet speaker), talk on "Beyond DXpeditioning: Albania, Myanmar and North Korea".

ZONE 2. Louis, VE2BQB, is currently active from Iqaluit on Baffin Island (IOTA NA-047) until December 15, 1996, as VE8TA. he was heard on 20 meters (14173 kHz) around 1745z. QSL via his CBA: VE2BQB, Louis Paquet, 1368 Rang 4, Lac au Saumon, P.Q., G0J 1M0 Canada.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z SEPTEMBER 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 15 SEPTEMBER AND FORECAST FOR 16 SEPTEMBER - 18 SEPTEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 66/0

GOES satellite data for 14 Sep
Daily Proton Fluence >1 MeV: 2.1E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.7E+09 (very high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Sep 17 Sep 18 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Sep: 69/3

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 14 Sep
Learmonth 11 3233 2232
Fredericksburg 12 12
Planetary 12 11

Observed Kp for 14 Sep: 2333 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
16 Sep 10 Quiet to unsettled
17 Sep 6 Quiet
18 Sep 6 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
15 Sep Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
16 Sep Normal Normal Normal
17 Sep Normal Normal Normal
18 Sep Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
15 Sep -4

Observed Australian Regional MUFs:
Darwin: 15-30% depressed for the period 0300-1000UT,
otherwise near predicted monthly values.
Townsville: Near predicted monthly values, apart from 15%
depressed for the period 0300-0700UT.
Sydney: Near predicted monthly values.
Hobart: 15% depressed for the period 0100-0700UT, otherwise
near predicted monthly values.

Predicted Monthly T index for September: 9

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
16 Sep 0 near predicted monthly values
17 Sep 0 near predicted monthly values
18 Sep 5 near predicted monthly values

>But what a great QSL card . . .

If it had been your son on that boat, Tom, would you have still written
those same words?

Happily, young Subaru sailed into San Francisco yesterday. Engine
trouble prevented him from charging his batteries, thus the reason
for no communications.

Seek professional help, Tom.

>yourself -- interested in homebrew CW?

Hi Garrie,
The reason I mentioned homebrewing is that Carl claimed CW ops
know nothing of how their radios work. He's convinced himself that
those who favor CW are appliance operators. Then he uses this
false belief as a basis for the purging of the CW tests, thinking
that CW is somehow holding us back technologically. He never considers
the fact that many of us have found our niche and are happy using the
present modes available to us.

Of course, if the tests are eliminated, watch his company's sales of HF
equipment soar!

Jeff KH2PZ (using homebrew CW gear - I *do* know how my radios work!)

Heehee, sort of like Carl who can't bear the thought of a day without
dumping anti-code posts on the wrong newsgroup.

>Nobody is trying to demean the memory of our veterans ... that's a
>pretty long stretch, even for you.

Most of the OTers you hear on the air *are* veterans. They talk about
their health just as your parents or grandparents do. Their conversations
consist of small talk just like your parent's and grandparent's conversations.
Yet those OTers laid the foundation for everything you have today - look
around you - everything you see and hear and feel is a result of those that
came before you. They were the inventors, designers, engineers, who brought
you everything that you hold dear.

Take your own medicine, Carl: "Give it a rest."

Jeff KH2PZ

P.S. How is your company's stock?

Dana Myers <myers@West.Sun.COM> wrote:
>Actually, I think the tests should include complex math, too.

That's vague. Some folks think all math is complex. Are you speaking
of the arithmetic of complex numbers: z = a + ib where i = sqrt(-1)?
If so, we call that complex analysis. And that's too easy. Let's get some
engineering mathematics involved. Let's bring back circuit diagrams that
the examinee must sketch. Let's *add* some other skill tests besides
code. Let's put up barriers to keep out those who just want to talk into
a mic and do nothing else. Let's take this to .policy.

>the past.

It might be the case that those who are on HF are happy just where they're currently at. If you want faster modes just so you can pass gigabytes of files that most folks won't read, do it on internet rather than wasting RF spectrum.

>>A no code license is perfect, where's all the techno-weinies

>narrow-minded, bigoted individuals and groups who worship antiquated
>technology as some sort of quasi-religion ...

I'm confused. Who are these people and how do they "see current no-coders" being abused? Are they licensed and on the air? Are they unlicensed and monitoring rptrs on a scanner? Are the narrow-minded folks who are running down no-codes on HF? If so, how are these unlicensed folks you speak of listening to the QSOs? Just who are these people that have "too much pride"?

I think these prideful folks you speak of consists of just yourself. You've been waiting 20 years for the code tests to be dropped so you can get on HF. You might have to wait another 20 years, Buddy.

>do you think the respondants were?

I think that they voiced similar opinions, but that they were
individually crafted and "signed" ... they were not "form letters."

>Plus the committee members
>certainly knew that the ARRL had advocated writing.

SO? What's your point here? You think the NRA and the AARP don't
"encourage their members to write" on important issues????

That's EXACTLY why they're so successful in getting their way ... they
mobilize their membership andget them to write, call, send e-mail, send
telegrams, call their congressman, etc. If we could do as well, we'd be
a lot safer ...

>I believe
>the ARRL screwed up on this one and hope it doesn't hurt us in

From: jlbarber@wolfenet.com
Message-ID: <51gpmq$bj5@ratty.wolfe.net>
Source record: 216759

Hi Folks,

I'm looking for info on whether the IC-900A (the one with the
'stackable' band modules) can operate as a cross-band repeater.
I just bought one, and I could use that feature.

I've looked in all the archives I know of, but the only thing
I've found is for extending freq range.

Thanks,
Jim Barber, N7CXI

>Rick, AB5ON

I know I've seen ads for just what you're looking for, tying two HTs
together as a repeater (or two mobile radios, or mobile and HT). I skimmed
a new and an old QST but didn't come across it right away.

Keep in mind that making an in-band repeater is quite a challenge to avoid
desense, especially on 2-meters.

As an alternate solution, we sometimes use crossband repeaters built into
dual-band mobile radios. We either cut the hangtime on the repeater back
to zero, or put PL on the repeater that drops off during the hang time to
make crossband repeating work.

That depends on the rig. There are no standards; not even polarity.
I've had tube rigs that had nearly a hundred volts across the key
contacts. An HT may have only one or two volts at a couple mA.

>existing amount of license class.

Why? If the government doesn't care if we do code or not, then why?
There really should only be one, perhaps two at the most, class(es) of
license ...

Why do pro-code folks insist on "status certificates"???

Who cares?

>
>Although I have seen some yelling about the incentive method, I really don't
>see any problem with it. I don't think we should just 'drop' the code testing
>and let everyone on the entire HF spectrum,

Why? It hasn't done ANYTHING GOOD for ham radio since "Incentive (for
raster code speed) Licensing" was established ... in fact, ham radio was
in MAJOR decline and aging rapidly until the no-code-tech was
established. 'Course THAT suited the olde fartz just fine ... "didn't
want more of those damned young wipersnappers in here inventing new
things and crowding 'our' bands anyway!"

>
>The 'old guys' vs. the 'new guys' isn't anything new. It was going on in the

>the privledges that some of the old guys feel that they have earned.
>

I proposed a 25kHz CW window at the bottom of the band, as a pacifier
for the olde fartz ... let them pound brass until they're too senile to
remember what the key is for any more ... just get them (politically)
out of the way of progress ... (they're welcome to participate in any
and all of the new stuff ... if they want to and they're capable of
understanding what's going on ...)

>Anyway, I might sign off on a no code general, if the senior citizens still had
>some place to go on their own. But then again, when I sober up in the morning

>others, I was told, require a prearainged freq,time schedule!
>Is this true?

No. All of the modes currently in use allow methods of calling CQ,
or otherwise making unconnected transmissions. For RTTY it is almost
the *only* way of making a contact (there is autostart). The other
modes also have other methods of establishing contact, so it isn't
the only way for them. But they all still make provision for CQ.

> I, at last, gave up, and sold the KAM PLus. Now
>I have Brian Beezley's excellent RITTY soft ware program which

Pretty neat stuff, shows you don't need exotic hardware to do
high performance machine digital, albeit only RTTY in this case.

>I also found, that even if you were to try to join in on a 20 meter
>packet frequency, you would be excluded as you "didn't know the
>code, or proper password to use to get in". Is this true?

If you fell in with the automated forwarding network, this is true.
Access is limited to forwarding partners only. There are other nets
and other random frequencies where HF packet activity is more like
what you may have expected. But HF packet is not well suited to
chatting (in fact it is not well suited to HF, the protocol and
modem standards are in desperate need of revision).

>Evidently operators of the digital modes, other than RTTY, do
>not send CQ's or otherwise entertain QSO's with other than
>predetermined recipients. Is this true?

No, that's not true. I typically make random contacts using Pactor
or Clover every day. I tend to answer CQs rather than send them,
but I do that too on occasion. So traditional operating technique
does still work with these methods. But unlike other modes, it
isn't the *only* way.

Many digital operators park their stations on known frequencies
when they aren't otherwise occupied with a QSO. This allows
their friends to find them easily, establish a connection for
a chat, or leave them a message. Many of these stations are
listed in "directories" which circulate in the digital community.
If you know the frequency, mode, and call sign (or SELCAL in the
case of AMTOR), you can connect to them and hit a few bell characters
to rouse the operator for a chat. This is a very common operating
technique in the digital community.

There are also open HF BBSs you can use. While I think these are
generally an abomination, they do have uses. This is one place
to find the "directories" I mentioned, or other activity news.
They also serve as a last resort for leaving messages for other
digital operators, IE if propagation won't allow a direct connect,
you can use a BBS as a mail drop.

>I have never heard a DXpedition use any digital mode other than
>RTTY on HF.

I don't keep up with Dxpeditions, so I don't know what they use.
It is my experience that digital operators in general are less
interested in Dx gaming than some operators of other modes.
And it is also my experience that of those digital operators
who are into such gaming, the RTTY operators seem to be the
largest contingent. That could be because the more traditional
operating techniques they are forced to use makes it "more
sporting" than it would be for more modern digital methods.

>I understand that after much discussion on the newgroups,
>that CW is not considered a true digital mode; too much human
>randomness creeps in to mess up the true digital timing nature.

Well, CW is a digital mode, though because of the non-uniform
timing code typically used, it is often treated separately from
the other digital modes. Some operators call it "manual digital"
to distinguish it from the machine digital methods because it is
more likely to be done manually than via a machine system. It is
about the only digital method which still uses OOK, the others
all use either FSK, PSK, or some more advanced modulation form
allowing the use of coherency to improve detection and decoding.
The other methods also use more formal protocols and many use
more advanced error detection and correction techniques which
allow easy operation under much poorer conditions.

>If the above points are true about HF digital modes, regardless of
>their superiority in thru-put rate, error freedom, etc., they are likely
>never to be accepted by the general HF amateur community. The
>HF operator, unlike the VHF operators, like to roam the bands,

>the random more exotic digital signal soliciting a call with whomever
>happens along to find it, seems like it is not a true HF band
>amateur radio experience. Of course, I am old fashioned and
>licernsed since 1950.
>
>But would appreciate clarification, if needed, about these new
>"exotic" digital HF modes.

Well, we do the traditional things you mention with the modern
digital methods too, though perhaps not as frequently because
it isn't the *only* way we can operate. Working distant stations
is *so easy* with many of the more modern methods that there
doesn't seem much point in participating in the Dx gaming
that seems to permeate the culture of operators of other modes.

I'v had long relaxed chats with operators in over 200 countries now,
using digital methods and less than 50 watts to a wire antenna whose
center is only about 10 feet off the ground, and which is located
between a two story metal building and a two story brick house.
Often I am hard pressed to make a SSB or CW contact (not that I use
the latter much at all), but digital contacts remain easy. I can
often maintain a contact with stations whose signals I can't even
hear over the speaker. I used to have a tribander on a 70 foot tower,
but I took that down to put up VHF/UHF satellite beams. And I have
an HF amp, but it hasn't been turned on in several years. There's
no need.

My experience is that most veteran HF digital operators are
ragchewers and/or experimenters primarily, though there is a
fairly large contingent who are public service oriented. Dx
hounds seem to be a minority, and seem to be concentrated
primarily among RTTY operators. Now that's just my take on it,
based on who I contact and what I monitor, but I suspect it
is fairly accurate.

If your vision of HF is dominated by Dx gaming, then you
probably won't find the current HF digital scene very much
fun. It hasn't yet been overrun by Dx fever. But if you
want to stay in touch with (or make) friends around the
world (and it is one of the few ways an amateur in a
"rare Dx" location can have a long uninterrupted chat on
the radio) and/or experiment with methods to improve
processing gain, link reliability, or throughput, or if
you have a public service bent, you might find something
of interest in the current HF digital scene.

No doubt the culture of HF digital operators will evolve over
time. Who knows what it will be like in 10 years? Just look at
the difference 10 years made in the culture of HF phone operation
between the 1950s and 1960s as SSB displaced AM. Technologies
do shape cultures to a considerable extent.

Cecil ... that's exactly THE point ... you got it, I got it ... anyone with a moderately firm footing in today's technical world got it ... but I doubt that Mike was in the minority of hams in NOT getting it ...

I honestly believe that the primary reason the "old guard" is so afraid of modernizing the test requirements is that, deep inside, many of them know that they've fallen SERIOUSLY behind the times but they can't accept the fact ... so they must suppress anyone or any thing that challenges their own lies to themselves that go something like "I'm a ham ... I'm a modern communicator and I know what radio is all about."

It'd be laugable if it wasn't so pathetic ...

>Hmmm.... My little radio shack HTX-100 has been in beacon operation
>for about a year. 5 watts travelling over 100 miles locally on CW and
>all over the world by propigation?
^^^

It's a pig, alright!

>Try that with any other means of communication on ANY other band.

As I've said before, digital systems are ROUTINELY transmitting data
over paths of several THOUSAND miles, day in and day out, using powers
in the 10 MILLI-Watt range ... CW is junk in comparison with the
modern technologies available in today's world, pure and simple.

: The HF digital "-tor" and Clovor modes are evidently not suited to
: the usual (that is, what is going on now) for today's HF radio
: amateur. I had a KAM Plus for awhile, and found you can neither
: send nor expect to hear a call for QSO by sending a CQ out on
: a random frequency somewhere in the generally agreed upon
: digital band windows. You can with an RTTY siganl, but all the
: others, I was told, require a prearainged freq,time schedule!
: Is this true?

<snip>

I see a number of answers to this, all of them asserting that
unscheduled contacts are possible with the TOR modes. I agree
that I used to be able to make AMTOR qso's without prearrangement.

What neither the poster nor the respondents take up is the
unsuitability of the lower priced HF transceivers for digital
modes. The SSB selectivity is insufficient, and there is generally
no way to offset the passband of a selective filter (which is
usually available for cw> to feed the output to commercial
decoders. That's what's keeping me off the air in digital
modes. I have an ICO 737, but I think the same problems
exist with all the compact less expensive sets.

Nope. Wrong. Incorrect. An unmodulated carrier (a beacon) has that distinction. Once you modulate it, it increases the bandwidth (i.e. power needed). Of course, the amount of information it can carry is quite limited.

On-off keying (OOK, which includes "CW") is one of the most unreliable of all of the digital modes. (Yes, Morse is digital.) Most of the newer digital modes are one HECK of a lot better than CW. I have personally maintained an AMTOR connection well after the band decayed past the point I could even hear the other signal. All I heard was white noise, yet his typing still appeared on my screen.

> >> * It is the ONLY radio communications mode that is understood
> >> readily by both man and machine.

If that's the case, why aren't there any reliable CW (Morse) decoders? I have yet to see one that can copy the entire W1AW CW bulletin without error.

BTW, a high percentage of "old timer" RTTY ops can recognize their calls directly. Some can actually copy the slower speeds.

Jari is also somewhat confused about pilot licensing in the United
States. A pilots license is a 'lifetime' license. True, you must pass
a 'flight review' every two years (among other requirements) in order to
excercise the privileges granted by the license, but you do not loose
the basic license if you fail to do so.

HELLO!!! WAKE UP!!! YOU OVERSLEPT!!! THIS IS NOT THE '50S!!!!!!!!!!!!

Times have changed ... that happens ... it's part of life.
Times will continue to change ... if you're not prepared to deal with
that, you're in for continuing dissappointment.

>I suspect that in 20-30 years, there will be no parts of the band
>reserved for non-phone usage. It will all then be by "gentlemens
>agreement".

Realistically, in 20-30 years, there will not BE any ham bands if we
don't modernize and grow ... the spectrum is too valuable for other uses
to devote so much of it to 150 year old nostalgia "technology."

Hams USED to be the INVENTORS, the VISIONARIES in the radio
communications field ... always ready to invent or adopt new things to
communicate better ... NOT ANY MORE ... today's hams are stagnated in
the technology of the 1950s (or earlier) and bitch and moan and whine
any time someone proposes the use of something new and better.

If you're not prepared to be a part of the solution, please at least try
not to be a part of the problem ... get out of the way ... stop being
such obstructionists ... let the visionaries, the younger people (in age
or spirit, or both, and the newcomers lead the way to the future.

This is true as well ... I'd carry it a step further ... NO
GRANDFATHERING ... I'd require all existing licensees to be retested to
the new standards ... let's see of the CW olde fartz can "cuat the
mustard!" This would not burden the FCC significantly, and would
provide an opportunity to cull the SKs out of the license database ...
no retest, no license ... dead or alive ...

>The by mode sub-bands are a separate issue. Winkler doesn't
>address this. While in an ideal world these by mode sub-bands
>shouldn't be necessary, in the real world we probably need
>to retain them in some form to prevent the inevitable turf
>wars which would otherwise erupt due to mixing of mode usage
>on the same spectrum.
>

I'd propose 25kHz per band, bottom edge as a "CW window" ... everything else should be open season ... from the regulatory standpoint ... that way we can manage our own band plans on a voluntary basis and retain the flexibility to change our "gentleman's agreements" as needs change without having to "go back to the well" in a Rules change sense ... I'd also favor removal of all bandwidth restrictions and all restrictions on alphabets (ASCII, etc.), coding schemes for EDAC, and spread-spectrum spreading techniques ... as long as we keep our emissions in our own bands, we should be free to experiment.

>As a personal matter, I'd like to grab some of that underutilized
>spectrum toward the top of the bands for higher speed data use,
>but I'm realistic enough to understand that wouldn't sit well

>on the analog segments, however, as digital usage grows over
>the next decade. Just as the CD pushed out the LP, it is
>inevitable that digital will push out analog on radio as well
>unless regulations artifically prevent it.
>

I'm rapidly reaching the end of my patience with the dog-in-the-manger old guard, Gary ... many of us have tried to reason with many of them for years and years and gotten nowhere ... I believe it's time to simply steam-roller them and get on with the future of ham radio ... if we continue to pander to their "tradition" and "sensitive sensibilities" any longer, we'll only be putting the entire future of ham radio at more significant risk.

If I'm going to "learn" any other languages, it's going to be something a heck of a lot more useful; something like Japanese or Spanish.

> It strikes me that those who spend so much time
> complaining about the code would more efficiently use the oxygen and
> resources they consume on this earth by learning and teaching the
> code, therby ensuring it's future use in our hobby.

One question: Why should we ensure its continued use? It's slow, and not terribly efficient as far as wpm per kHz go. (20 wpm is less than 2 char/sec; 10 bits/sec if you encode it in a 5 bit system like Baudot. That should need at most 10 Hz of bandwith. CW needs a few hundred Hz. I can get ten times that throughput, error free, using 300 baud packet on HF, with not much more bandwidth.)

I don't know of anyone complaining about the USE of CW on the bands; they are complaining about the REQUIREMENT of having to become proficient at a higher-than-minimum speed in a mode they have absolutely no desire to operate.

I have a degree in Electrical Engineering, specializing in digital communications and computer science. While my ham ticket was useful in pursuing my degree, I had no need for knowing Morse (except for getting my Tech ticket 10 years ago). Even now, the only use that I have for getting a higher class license is to shut up those people whose only argument is that I'm simply trying to get out of learning the code.

> A Filter??? Maybe not,

Maybe??? Take a listen on 20m. EVERY (legal) user of that band with a US callsign passed a minimum of a 13 wpm code test. It's worse than the CB bands.

I think that the price of the radios makes a better filter than any kind of CW exam.

> but detractors should spend some time on 30
> meters listening to the new Hams and how hard they work at becoming

> proficient CW operators...it's heartening to hear.

More power to them. Nobody is proposing that CW operation be banned, or
even discouraged.

>the ever increasing demands of a profit driven Communications Industry.
>

Not numbers alone ... but technical progress ... more efficient use of
our spectrum by larger numbers of hams, performing more useful public
service work and doing more experimentation and development of new
technologies ... those are the things that will save ham radio ...

>Morse, while certainly an ancient form of communication, is essentially
>like any other language. It is easy to learn and can be picked up by
>children in a short time, why not the rest of the population?

With this argument, you could just as well substitute "Nursery Rhymes"
for "Morse" and it would fit just fine. Would that make a test in
Nursery Rhymes a reasonable testing requirement to obtain a license
permitting access to HF spectrum???

>It
>strikes me that those who spend so much time complaining about the code
>would more efficiently use the oxygen and resources they consume on this
>earth by learning and teaching the code, therby ensuring it's future use
>in our hobby.
>

We couldn't care less if "Morse's future is ensured" ... nobody else in
the world does either, except for a few thousands of backward hams,
clinging to antiquated technologies like some sort for religious icons.

>A Filter??? Maybe not, but detractors should spend some time on 30
>meters listening to the new Hams and how hard they work at becoming
>proficient CW operators...it's heartening to hear.
>

If someone WANTS to learn Morse, fine ... otherwise, there's not one
iota of useful purpose in forcing them to learn it ... and there's
significant harm in banishing them for not learning it ...

>Perhaps it would be better for all of us to heal the wounds that divide
>us and present a united front at Warc. Our enemies are many and their
>percieved spectrum needs large. I believe our entire hobby is at stake.
>

That's EXACTLY why we feel so strongly that THE MORSE REQUIREMENT MUST
GO!

>: Its the core of the problem, CW that is. DROP THE CODE!
>
>Maybe drop it as a requirement. However, reserve a segment of each band
>for CW only - with maybe subsegments for different code speeds.

OK ... I've already said I'd go along with 25kHz, bottom of the band, on
each band, as CW-only ... anything more exclusive is too much ...
nothing to stop CW operationin the ramainder ... but more than 25kHz
exclusive is too much "dinasaur preserve" ...

>Then set
>up two code tests 10 wpm and 20 wpm. One subsegment would be for people
>who could receive at under 10 wpm - regardless of license class. This
>would allow anyone to dabble, and probably find someone who sent code as
>slowly as they could receive. The second subsegment would be for 10-19 wpm
>and the third for 20+. Make it CW only - no AMTOR, PACTOR or other modes.
>

There is no point in continuing ANY code testing ... let people dabble
with CW if they wish ... even use it exclusively if they wish ... but
make it COMPLETELY VOLUNTARY ... if people WANT to do it fine ... if
they don't LET IT DIE (a "dignified death" without a bunch of artificial
life support)

SOMEONE HELP ME ... I NEED A .GIF OF "MORSE" in the ICU ... with all of
the machines, tubes, etc. hooked up to "him" ...

>This would provide a place for people who enjoy CW, as well as those who
>do not care for more modern communications methods.
>
>As far as dying modes - isn't SSB dying out, except on the Ham and CB
>bands? Most other communications seem to be FM or digital, due to the
>increased noise immunity.
>

SSB is NOT dying out ... it is used extensively in the marine and aviation bands, by the military, and for many other things ... it will eventually be replaced by digital methods, but for now it is still quite vital (in the "health" sense, that is)

Remember, SSB is only about 50 years old on radio ... CW is roughly 3x as old ... so it only stands to be more antiquated and less used ...

> jlbarber@wolfenet.com

To make the IC-900 cross-band repeat, a diode needs to be installed in position 1,A in the diode matrix inside the control head. Then open up the interface "A" unit and flip the two slide switches to position 2.

Select a SIMPLEX frequency on the two bands of interest, then turn on the "Lock" switch on the side of the control head. The "Lock" indicator will blink. You are now in cross band repeat mode. To exit, turn off the "Lock" switch. Note that the crossband repeat works ONLY with simplex frequencioes. Neither will PL encode work. Hope this helps.

Hm. Maybe we should also set up a 25 KHz SSB window next to it. After all, SSB is also dying - with the shift being to digital. The same should be done for FM.

Then, we can isolate ALL those who are not willing to experiment with new technology.

And there are many, many technically inclined and competent individuals coming into ham radio who enjoy cw- I run into them on the bands all the time. Guess those who let cw stand in their way aren't really that interested in ham radio after all. It's not much of a barrier to begin with; certainly not to someone who's really motivated.

3127. retractable antennas?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-15 00:00:00 UTC
From: arthurc@crl.com
Message-ID: <51hf4g$t4e@crl11.crl.com>
Source record: 216793

I'm considering getting a 2-meter or (preferably) a dual band 70/2
in-dash radio for my Toyota MR2. But I don't want the antennas
permanently looming up over the car. So:
Anyone have any suggestions as to retractable antennas that telescope
back out of sight when not in use?
Thanks!

>you mention is just good solid application of well understood circuit
>techniques. Nothing wrong with that of course. It is very good work.
>But it isn't a major breakthru.
>

I was thinking the same thing ... good work, but really nothing new ...
It occurs to me that a fundamental problem is that many, many hams are
so stuck in the past that anything that wasn't known by everyone in the
1950s is "exotic", "new", and "radical" ... this is a MAJOR problem.

Hams used to be the leaders in communications technology ... the
inventors, the adoptors, the visionaries ... about the only "vision" I
see from most nowadays is the blank stares I get when I try to talk
about something that's truly new and recently-developed ...

>What Sam did was on the level of Armstrong deliberately introducing
>positive feedback to a detector. There are few examples of that sort
>of thing in hardware design today.

There's lots of innovation going on in hardware still, it's just not
happening in ham radio any more ... that's sad and dangerous.

>
>Five years ago most amateurs couldn't spell DSP. Today many of them
>use it as a routine part of their stations.

Most ham's "use" of DSP has NOTHING to do with how the things inside the
box work ... only with turning it on and off ... most could not begin to
tell you how the thing works or how to design one from scratch.

>That's revolutionary.
>And it is not a fad likely to quickly pass from the scene.

I'm afraid I don't see anything "revolutionary" in appliance operators
buying moderately more modern appliances ... it doesn't say ANYTHING
about the knowledge or skill of the appliance operator ...

in fact, it bodes ill for the future, because the less the appliance
operator understands the inner workings of his appliances he becomes
more and more incapable of repairing them (let alone designing and

building newer, better ones) ...

Thus, the more dependent he is on the appliance supplier and the less value he has to the regulators who control the spectrum as a knowledgable communicator/technician ... he's certainly doing ABSOLUTELY ZERO to "advance the radio art."

>We can
>do things with digital technique which are difficult or impossible
>to do with analog technique. That becomes especially apparent when
>we also adopt digital modulations and codings rather than just applying
>the new techniques to old analog signal encodings. The use of strong
>FEC and powerful ARQ protocol techniques allow us to work at signal
>levels unheard of before digital encodings displaced analog encodings.
>

I'm afraid that the average ham today doesn't understand the value of what you suggest, let alone the means to accomplish it ...
This is what we must change ...

>I agree that amateurs continue to advance the art on all fronts.

Damned few do ...

>But I think that the largest advances are happening on the software
>driven digital front rather than on the conventional analog signal
>hardware front. Like the switch from LP to CD, it is happening
>with astonishing rapidity. The day of the software driven (nearly)
>all digital radio is rapidly approaching.
>

Software is cool ... when properly applied ... and DSP is powerful, but there is still room for a lot of hardware innovation, too ... after all, the DSP requires a "front-end" and the software runs on hardware ...
but you know that, Gary ... it's the majority that I worry about ...

If you plan on sending in stereo, be sure to get one that uses a crystal
for the stereo pilot tone. That is a critical frequency setting. My
friend had an early one (may have been Ramsey) that used a trimmer cap
for setting the pilot tone frequency. The radio worked fine and sounded
good in mono, but we couldn't keep it in stereo. Others that have built
the crystal controlled transmitters reported no problems at all.

Nobody here has said "do away with CW" (as in "ban its use") ... just
the test requirement is at issue.

> CW is an art form.

So is fingerpainting ... both are equally irrelevant as qualifications
for a license to use modern digital modes, SSB, etc. on HF.

>We live in an instant gradification society, "I
>want it now !!". We've been pretty much conditioned in this mode of
>operation. Why does it have to include ham radio?

It has nothing to do with "instant gratification" it has to do with the
relevance of licensing requirements in today's world.

What about tradition?

"Tradition" is a set of outdated "values" that the "old guard"
holds up as "evidence supporting" the maintenance of the status quo.

>Ham radio has a great tradition and CW is part of it. Things like
>making your first QSO as a new novice (I still remember mine),
>developing your skills as an operator on CW and phone, moving up to the
>next license--these are things you can be proud of. Which mode gets
>through better is not the point. Sure I 've been on for almost 40 years
>now and I'm an old -- whatever, but I am still proud of my abilities on
>CW and phone. You are advocating the loss of opportunity. No one "even
>in the dark ages" wanted to spend time on CW at the start. All I wanted
>to do was talk on phone. That was in the beginning, but as time passed
>and my skills increased I had gained something.

I would submit that "gaining" something that is no longer of value (or
is of no value to the obtainer from the outset) is not a "gain" at all
.. moreover, if one has expended significent time and effort on
"gaining" it, it's, in fact, a waste ...

>Talk to some of the old timers. Develop some real pride in your hobby
>and you will try and protect it.
>

I' trying to protect it ... it's you "old guard" types who are
endangering it ... you old-timers are the ones, for the most part, who

are keeping ham radio locked in the 1950s ... that's not protecting it, that's signing it's death warrant.

> Because I am an Extra does that make me elite? Well, it took me 20
>years to get there (many failed exams at the FCC). No, I don't think
>I'm elite, just proud of what I did. Do I deserve more spectrum--you
>bet--I earned it! You earn it, and don't degrade the accomplishments of
>others.
>

You "earned it", for the most part, by demonstrating that you had, as someone put it the other day, "conditioned your nervous system to act as a modem."

My point is that in that capacity, it's a LOUSY modem ... I can build much more effective, efficient modems than that ... demonstrating the requisite knowledge SHOULD be AT LEAST an EQUALLY effective means of earning access to HF ... I would maintain more so, because the ability to design more efficient means of communicating USED to be one of ham radio's most important, valuable attributes ...

In more recent years, however, as YOUR generation has aged into the "establishment" position, that spirit of invention and progress has fallen by the wayside and been replaced with a bunch of lazy, cheapskate, whining olde fartz who'd rather stagnate in the 1950s and sit on their laurels that contribute to the future of the ham radio service ...

If that's what YOU want, fine ... but "go quietly into the night" and don't drag the entire future of ham radio down with you.

Carl,

Your prejudice toward older hams seems disgusting and mean spirited.
If it were not for those who have gone before us, there would not be a
ham radio service at all. We owe a debt of gratitude to these pioneers,
and to those who have done battle in the past and present to preserve our
hobby.

Hams who are older are not stupid because they are old. For example, are
you getting stupider as you are getting older? I hope not. Such
stereotypes engender anger and resentment, and are of the same ilk as
similar stereotypes involving race, gender, religion, to mention a few.

Stereotyping those of us who support continued code testing into a class
that needs a "pacifier", and insinuating that we are incapable of
understanding the "new stuff", is not likely to cause us to support a
proposal that would throw us a crumb by giving us the lower 25KHz of the
bands we currently have full advantage of.

I don't know your age, nor do I care; however, just remember that each of
us, if we live, will grow old. I hope you will be able to receive with
equanimity the same that you have given, when you become a member of the
senior citizen category.

I believe you could argue your case without casting aspersions on
seniors. Besides, there are many who support continued code testing who
are far from being senior citizens, and no doubt some seniors support the
elimination of code testing.

: >if a person plans on getting over about 9/10 wpm without a great
: >struggle.

: That's just plain ridiculous. I don't know what you mean by
: "sight/sound" system. Code Quick uses mnemonic devices.

: I made the assumption that the person was trying to LEARN the code,
: not increase speed, The Radio Shack tapes are useless for both. One
: can learn the code in days with Code Quick. Increasing speed is
: another issue entirely, but you have to know it to improve it.

Mnemonic devices, as well as all other such "crutches", cripple a
person when they want to increase their speed. In my opinion, it
is a disservice to the student to do so.

The Radio Shack tapes work for both learning the code and increasing
speed. You just do not learn the code as quick as you would with the
various "mnemonic" or "sight/sound" or "visualization" systems.

Now, if the intent is to just learn the code, then Code Quick would be
fine. For someone who wants to become proficient with code, it is an
impediment.

It all depends on the person's ultimate goal.

3139. DX Club BBS alert doesn't ID.

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-15 00:00:00 UTC
From: bd703@scn.org
Message-ID: <Dxqzr8.F22@scn.org>
Source record: 216829

There is a computer generated voice "DX Alert" on the 147.00 repeater
in Seattle. Apparently this is accessed from a BBS.

This is fine and dandy except that the alert never ID's after keying the
radio at the owners home. (never gives callsign so I can't tell the owner)

Is there some one who can bring this to the owner's attention and get it
fixed?

Kerwin

: Its the core of the problem, CW that is. DROP THE CODE!

Maybe drop it as a requirement. However, reserve a segment of each band for CW only - with maybe subsegments for different code speeds. Then set up two code tests 10 wpm and 20 wpm. One subsegment would be for people who could receive at under 10 wpm - regardless of license class. This would allow anyone to dabble, and probably find someone who sent code as slowly as they could receive. The second subsegment would be for 10-19 wpm and the third for 20+. Make it CW only - no AMTOR, PACTOR or other modes.

This would provide a place for people who enjoy CW, as well as those who do not care for more modern communications methods.

As far as dying modes - isn't SSB dying out, except on the Ham and CB bands? Most other communications seem to be FM or digital, due to the increased noise immunity.

Hi Bill

I have stacked them both ways. I prefer one on top the other @ 1/2 wave apart if possible. But Bill is right its real hard on the rotor. But depends on what band you are using. Like I wouldn't on 40meters. WOHA

Somehow I believe that all of this effort (right-or-wrong) is not going
to make much of a difference. Has anyone considered letters to Congress
as the way to make a real impact? So far, the only result I can see for
all this effort is a lot of hard feelings on all sides.

It appears that we all agree on what we want, but the method of getting
what we want is in question. Instead of all this nit-picking on the net
we should be writing congress instead of doing the "who done what" with
it's usual results.

>hams to do something considered very rude? Again, if you don't think
>an e-mail flood is rude, you haven't been there yet. It is a kind of
>terrorism.

Sumner just sent the State Dept a message, that war is
the conduct of diplomacy by other means. And he made
sure it wasn't just something that they'd hear about
from some low level clerk. He made sure it was something
that they would experience up close and personal.

The ARRL rep had tried ordinary diplomacy. That failed.
He tried a bit of saber rattling. That failed too. So
Sumner had two choices, back down and admit the ARRL
was all talk, or make a precision strike on high value
targets to convince them he was serious. He chose the
latter course.

In this instance, I think it was the correct course.
Politics is often rude, and nice guys usually finish
last. The ARRL tried playing the nice guy on 220 MHz,
and lost. This time the stakes are higher and they're
playing hardball.

In the boock "Power Supply and Battery Charger Circuit" by Rudolf F. Graf, edited by McGraw-Hill in 1992 I have seen many references to "WILLIAM SHEETS". Does sombody know where I can get copies of the mentionned "WILLIAM SHEETS" ?

Thanks for any help.

73 and best regards

Check out the new Ham Radio.FAQ on my home page. Many ideas of
best way to learn the code. Consider that there are some ways for
some people to learn it that DON'T WORK and others that DO. Therefore,
one has to LOOK and TRY the various methods or they make the
task hard and not fun. Why use a heavy shovel as a fly swatter? We
learn different things BEST in different ways.

EXPEDITION OF THE COPNTEST GRUPO WWE TO

BIG LOBEIRA ISLAND

THE 21 - 22 SEPTEMBER 1.996

Especial Call AM-1-ILO

GEOGRAPHIC SITUATION

In the Northwest of Spain, the Big Lobeira Island set in full Costa da Morte (The Death Coast) in Galicia, is situated about 2 nautical miles from
the coast, among the town councils of Corcubion, Cee and Dumbria. It is found, likewise, next to the known Finisterre Lighthouse.

BIG LOBEIRA ISLAND

It is the biggest of a little group of small islands named Lobeiras. Its surface spreads over 9000sq mts and at a high of 18 mts over the sea level.

AWARDS AND QSL INFORMATION

Lobeira Island is valid for the following awards:

FAROS DE ESPAï¿½A AWARD (Spanish Ligthhouses Award) with D-1756 reference. For any information contact with EA5KB-Pepe.

IDE AWARD (Islas De Espaï¿½a-Spanish Islands) with O-133 reference. This award is managed by the UREï¿½S LOCAL SECTION from PATERNA, whos President is
EA5MO-Manuel.

QSL manager of the operation, like other operations of the WWE group, is EA1EPB (lgros@coverlink.es) QSL cards will be answered without problem VIA
BUREAU. Nevertheless, we will be very gratefull for your dollars which will
be donated to the UNICEF Central Office in La Coruï¿½a.

For any explanation about this operation you can send a mail to :

EA-1-EPB - P.o.Box 974 - 15080 - La Coruï¿½a Espaï¿½a.

Hello, Folks:

I have just put up my new home page and invite all to drop in for a look. Included at the site are the following areas:

Ham Radio -- Mostly packet, mostly high speed

Pipe Smokers -- Very, very much still under construction

Astronomy -- Mostly Amateur Radio Astronomy (good 2nd interest for Hams!)

Mapping -- Mostly about elevation maps

Heartland Internet Services -- Lots of Web Presence information

The URL to use is:

http://www.trucom.com/ppages/marty

Thanks!

Take Care & 73

>

Peace ... my point was that there should be vitually NO bickering about
protocols and so forth .... the TCP/IP protocols are the defacto
standard for interoperability and AX.25, ROSE, NETROM, and any other
TNC-based kluges should be abandoned (rules changes should happen at
allow this immediately, if not sooner).

>It is necessary to develop a consensus among a large enough group to

>

Good idea ... put the burden on the folks who use the stuff.
I'll go along with that ... the core techno-weenies can *train* the
locals, as necessary, to install and maintain their own LANs ... and
devote more of their time to designing new goodies and planning for th
future. Sounds like the best allocation of resources to me.

>

Source record: 216853

Hi Mike,

It's almost as easy as that, but not quite.

First, you need to enable the serial port on the 440, which you do by installing two ICs in sockets on the digital board (behind the front panel). There are clear instructions in the 440 manual, but they fail to tell you that the ICs required are an 8251A and a 4040 (older chips, but still fairly easy to find).

Then, because the 440's port is at TTL level, you need a TTL-to-RS-232C level converter. You can buy a Kenwood IF-232C (excellent but expensive) or build your own of comparable quality following plans in the 1995 and 1996 ARRL Handbook (reprinted from Feb 93 QST). Ramsey and MFJ have in the past sold (inferior but cheap) converters.

All this info is available on my Kentrol web site, along with some idea of why it's worth doing.

CW, or more correctly, OOK-CW, actually is digital in a crude sense. It
is however, probably the poorest coding scheme ever devised for
representing plain text messages in digital form.

(I'm sure the high-priests of the Morse-odist religion will promptly
brand me a heretic of the highest (or lowest, maybe) sort for this
statement)

>If the above points are true about HF digital modes, regardless of
>their superiority in thru-put rate, error freedom, etc., they are likely
>never to be accepted by the general HF amateur community.

Again, the assumptions/assertions above are false ...

>The
>HF operator, unlike the VHF operators, like to roam the bands,
>find random and far away folks to chat with on both SSB and CW.
>Both of these modes have there pros and cons, but at least you
>have a chance of hearing a weak signal calling for a contact on a
>random frequency in the band, and probably being able to establish
>a plesant QSO, QSB and QRM permitting.

There is nothing inherent in things digital that would preclude implementing systems capable it this ... most of the modes that are in present use provide for calling CQ ... spread spectrum systems would involve something in the protocol to provide an "address" for calling CQ, with a substequent switch from the "calling channel" to a "working chananel" ... what's the problem?

>If you can't find and work
>the random more exotic digital signal soliciting a call with whomever
>happens along to find it, seems like it is not a true HF band
>amateur radio experience. Of course, I am old fashioned and
>licernsed since 1950.

You're going to have to accept the fact that it's not 1950 any more ... things will change ... very little in our lives is like it was in the '50s any more ... this applies to the "HF band amateru radio experience" as well ... if it DOESN'T change and keep up with the times, it's destined to dry up and blow away in a few years ...

>
>But would appreciate clarification, if needed, about these new
>"exotic" digital HF modes.
>

There's really nothing "exotic" about the newer digital modes ... it's really pretty much "old hat" to those of us who work in industry ... it's only "exotic" and "newfangled" and "complicated" to those who haven't kept up with the times.

Used to be that the "amateur radio experience" was at the forefront of technology ... inventing the new gadgets, instead of complaining about them. I have to ask myself "What the hell happened? Where did all the initiative and curiosity and wonder at things new and different go to?"

It's high time the "CW olde fartz" stopped whining about the "good old days" and realized that in the "good old days" the hams were the INVENTORS and ADOPTERS of NEW TECHNOLOGY ... not the lazy, stagnated, technophobes they've become.

(I don't mean this to be personally offensive ... but you folks have GOT to realize that the TERRIBLE change that's come over ham radio in the past 50 years is NOT new technology, it's stagnant OLD THINKING.)

SSB is NOT dead ... just middle-aged ... CW, on the other hand is
positively fossilized ..

Besides, I specifically said a "CW-only" segment ... a "preserve" if you
will ... and I specifically said that use of CW would NOT be prohibited
on other frequencies any more than it is now ...

I have no doubt that, left to fend for itself without government
mandated life support, CW will ultimately retire to the nostalgic
curiosity status it deserves in a decade or two, with a few adherents
still practicing it, much as there are steam-engine buffs and people who
like to dress up in colonial costumes and churn butter in a wooden
gizmo.

Close but not precise Bill, I know of no way to produce SSB signals by plate modulating a final amplifier. You can produce a modulated AM signal (carrier, upper sideband and lower sideband) by plate modulation, but you cannot produce a SSB (single side band) signal by plate modulating a final amplifier

Yes a AB1 amp is not as "linear" as a class B amp, when was the last time you saw a commercial class B amplifier advertised for sale on the amateur market? The question posed and answered was concerning a transistor amplifer the OM is looking to purchase for two meter work.

>>I just got a lead that my county listing in the QRZ callsign database
>>was incorrect, so I went and checked it, and sure enough it was one
>>county off.

Apparently one CD's "FCC data" isn't necessarily the same as "another CD's data."

I found this out when the "Flying Horse" Callsign CD came out. They missed many, many callsigns that were (a) issued many months previously and (b) were on the QRZ! CD for many releases. When I asked them about their omissions, they balked and said the same thing: "Well, we got our data from the FCC..."

3169. Street Car Speed Control

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-16 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <01bba371$53c87a60$05070ccf@jim-reid-1>
Source record: 216619

Some decades ago, when I was in engineering school, I was required
to learn the San Francisco Street Car electrical control system.
And it was on a mid-term exam!! I felt at the time that to learn
that material was nonsense, as I wanted to learn all about
electronic circuits; that is, at the time, when a filament was
heated to incandesance(Sp?) in a vacuum, the filament gave
off electrons, which we were told then, were negatively charged!
For my aassistanceship, I really did build a TWT tube, and had
the fun, and pleasure of bringing the filament and cathode to life.
But, that was another life ago.
Well, I still had to learn about induction, shunt, and series wound
motors and generators, and all that street car stuff. Of course now,
most of what else I learned in those days is no longer of too much
use!! Never heard of an IC in university, tho I did have to take
solid state physics, as there was talk of exotic work going on at
Bell Labs at the time to develop a solid state triode. I guess it is
well Shockley figured out the solutions to the quantum field equations
within a semiconductor, else we still might not have the transistor.

Makes me appreciate a bit, perhaps the view that Carl and others
have about needing to learn CW today. Of course, as I have posted
elsewhere, CW is very much alive, and being used quite a bit about
the world, but it is supposedly supposed to die out, that is, if
they really can get GMDSS to become reliable!

I really would object to having to learn about street car control systems
today were I in school!! Even when someone told me they were still
very much in use elsewhere in the world; but not where I am. Even the
steam trains have left Kauai!! But, I am one who really does enjoy
using the CW mode, old coot that I am!

73, Jim, AH6NB

I don't think HF lends itself to FM very well. Fading tears up FM
signals, and FM takes up more bandwidth.

Q codes can be learned and used on a speaking basis also. Having
said that, I recognize some languages (oriental, middle eastern,
african, etc.) have no equivalent alphabet which makes speech
AND cw use of such codes difficult.

>the market. Make these guys at least earn their license and learn a
>little about Amateur Radio before giving them their ticket.

Reality check again. Back when there was no question pool, there
were still what you call cheat books. As long as there is any
continuity of testing, there will be testing aids. Make the pools
larger if you want. Make questions with calculations in them
an open set of variables. That'd go a long way towards eliminating
straight memorization. BUT... most regulation and much theory
is still a rote memorization process anyway, so it'll never be
eliminated totally.

I am in favor of eliminating CW testing, I am NOT against the
use of CW.

IT'S HERE !!!!
MFJ has a 'Trumpet-Net-Code' (TNC) that transcribes all of the
information on the internet into your choice of modes (morse, rtty,
Amtor,Pactor and G-Tor). You simply put it between your rig and
computer and you can then SCREAM through the net at speeds up to 300
baud !!!!! There's rumored to be software available to convert
received morse into .jpg and .gif files so that you can get all the
nudie pix off the alt.binaries sections if you still have a hankerin
for copying the code and checkin out the chicks!!!! Will wonders never
cease ???????

Source record: 216623

JR>From: "Jim Reid" <jreid@aloha.net>
JR>Subject: Learning/Improving CW Skills

JR>By the way, contrary to what you read on many of the amateur radio
JR>newsgroups, CW is alive and well in both the commercial and military
JR>communication systems of the world! For example:

Nobody in rec.radio.amateur.policy has stated that OOK CW has ceased.
No one. The argument (at times heated) was concerned with retention
or deletion of a Morse code test for the USA amateur radio service.

JR> The Brit AirForce, the RAF, is still teaching and using CW.
JR>The 13 week course, given at No. 1 Radio School at RAF Locking,
JR>requires 18 wpm skill demonstration to pass. CW is used, world wide
JR>by the RAF in many ground to ground and ground to air circuits,
JR>Falklands, etc.

I've seen both front and back seat areas of a Tornado. No CW key
or connection port there. It would be surprising indeed to find CW
used ground-to-air in any tactical situation in any air force
anywhere in the world. Military signal units in most of the world
may still have CW occupational specialties, either for intercept
purposes or as very-last-option communications. USAF SAC aircraft
used SSB for long-haul communications back in the late 50s.

JR>This past June 28th, the Russian Cruies Liner, Alla Tarasovia, at dawn
JR>that day, with its vaunted GMDSS (Global Marine Distress Satellite
JR>System) apparantly inoperative, had to send out a CW SOS with
JR>position, heading, situation, etc. The CW signal was intercepted
JR>by Stonehaven Radio and alerted the Aberdeen Coast Guard. 71
JR>passengers and 68 crew on board were saved from harm as a result
JR>of an alert and competent CW operator. The liner, chartered by
JR>Toronto based Marine Expeditions, had lost engine, power and was
JR>drifting out of control Thank God the RO was still CW competent
JR>and so was the watch RO at Stonehaven.

A wonderful story. Not knowing maritime procedure, I would suppose
that the Russian ship radio operator had knowledge of some English
and could handle the difference between Cyrillic and English CW.
Apparently there was no other radio communications aboard the Russian
vessel but auxilliary power was available for the CW radio?

JR>In follow up, BBC TV reported this past July 16th, that the worldwide
JR>GMDSS is "in a state of near collapse." The report claimed that about
JR>95 percent of marine distress calls being rcv'd by Coast Guards are
JR>false alarms! Falmouth Coast Guard alone recv'd 959 false calls in

Shall we chalk this up to "overcomplicated modern technology once
again proving itself of no use?" That CW is the only chance for
safety at sea? There is no maritime voice SSB? No VHF maritime
band radio?

JR>International shipping may just reconsider the situation and decide they
JR>had better maintain, on the watch 24 hours, CW competent radio
JR>operators on board, and similarly at Coast Guard stations worldwide.

There was a reason for having CW radio proficiency internationally,
plus having a radio (most ships did not in 1912), plus the
establishment of 500 KHz as an international distress frequency as a
result of the HMS Titanic disaster. Nearly all Titanic passengers
and crew perished back then. Was any life lost during this MS Alla
Tarasovia incident? There are maritime frequencies on HF and VHF,
VHF and SSB (HF) voice equipment for maritime bands has been
available for at least two decades. There are models of both types
that work on 12 to 32 VDC battery busses of pleasure water craft.

JR>Anyhow, jump on in, and learn and enjoy CW. Who knows, you might
JR>also, one day find yourself in a situation where CW just might be the
JR>only mode of communictions.

That is the stuff that novels are made of. I've done a lot of flying
although very little of that as pilot. Have yet to hear 121.5 or 243
MHz actually used any purpose other than for a brief radio check.

Emergency transmitters for life boats were being equipped with
keyboard-to-CW converters over three decades ago, one of the
first applications of keyboards outside of typewriter terminals.

JR>etc. On the CW mode you will meet a lot of people just having fun!

Certainly, no argument. Those that can do CW and remain using CW in
a non-occupation environment MUST be having fun. Why remain
otherwise?

The other side of a very real coin is that many people CANNOT learn
this aural-mental skill despite all the claims made by those who can.
Humans do NOT have equal skills. No amount of boosterism or
belittling of those without the talent will help those who cannot
learn. Those that cannnot learn CW well enough are not IN the HF
amateur bands in the USA. They've either gone no-code Technician
Class and are presumably having fun there or they've dropped out
of any further effort towards amateur radio. Those aren't heard from
because they either aren't there or are considered "second-class"
citizens by HF operators because of their Morse code inability.
So much for handicapped help.

>Close, but not precise. With plate modulation, a Class C amplifier is
>perfectly acceptable for AM or SSB.

Not really. When plate modulated, the Class C amplifier is actually
amplifying a *CW* signal. The modulation doesn't exist until *AFTER*
the tube/transistor is done amplifying. If the AM/SSB modulation is
already on the signal, you can't amplify it in a Class C amp. (at
least,not if you want the other guy to understand what you're saying!)

Incidentially, I'm not certain it's possible to plate-modulate an
amplifier for SSB. (though there may be an obscure phasing method I'm
not familiar with)

> anything seriously wrong with the coax, it will show up right? any help would
> be greatly appreciated.

Yes, it's safe, but unfortunately it's not really very useful.

When testing suspect coax it is relatively rare that one is trying to measure either the characteritic impedance or to detect for impedance discontinuities. If the coax is marked with a known brand and type and the line is visibly undamaged (no sign of being squashed or kinked), then the usual test is only for attenuation and then the test that you described is not at all helpful. Indeed the higher the attenuation (hence the worse the line) then the better the input SWR will be, regardless of any impedance mismatches that are present.

To measure the attenuation of a line you might measure the return loss when the distant end of the cable is open circuit and/or shorted. Or else measure the power into into the terminated line and then again out of the line and into the terminating dummy load.

> : Stacking vertically is a much easier mechanical arrangement.
> Yes, but harder on the rotator.
Huh? Would you mind explaining that leap?

If the rotor is mounted inside the tower with a proper thrust bearing,
(In both the vertical and horizontal stack) how is the vertical stack
harder on the rotor?
The moment arm of the mast sticking out (assuming a "close stack") is
of NO concern on the rotor, and provides the *same* weight and mass to
be rotated as does the horizontal stack, *BUT* the horizontal stack
has a MUCH greater horizontal moment arm for added torque on the rotor
and a far greater braking and holding load....

Looks to me like the horizontal stack, using a long horizontal mast to
separate, creates a great deal more stress on the rotor, and hence is
much harder on the rotor...

But then I may have overlooked something magical somewhere. ;^)

>allow this immediately, if not sooner).

Hello? TCP and IP are level 4 and level 3 protocols respectively. You can
not use them naked. You have to have a level 2 protocol under them.
On ethernet it is the MAC layer, on VHF+ radio it is AX25, or something
that serves the same purpose as AX25. AX25 has some warts, but you
can avoid them if you just use its UI datagrams and forget the VC stuff.
There's no real need to change this.

On HF you want to use a more robust link level protocol. For multipoint
packet switched networks sharing a common channel, you need a receiver
driven DAMA protocol to get the most out of the channel. We don't have
one of those, and that's something we need to develop. But for point to
point links, Clover will serve nicely. Since these have to be supervised
links anyway, the autoforwarding restriction is a moot point.

You're railing against a non-problem. The TNC is an obsolete paradigm,
but the link level protocol it implements is still needed. We just
pull it back into the switch firmware instead. The beauty of TCP/IP
is that it doesn't care what link level protocol it runs over. We
can pass data over AX25, Netrom, Rose, etc. It doesn't care. Of
course we care if the link level is efficient, so Netrom and Rose
aren't very good choices, but plain old AX25 datagrams work just
fine on VHF+.

>Good idea ... put the burden on the folks who use the stuff.
>I'll go along with that ... the core techno-weenies can *train* the
>locals, as necessary, to install and maintain their own LANs ... and
>devote more of their time to designing new goodies and planning for th
>future. Sounds like the best allocation of resources to me.

Jeeze, Carl, you're every manager's nightmare. You have a way of
phrasing things that manages to piss off everyone. Our structure
is not top down, it is bottom up. The LANs *are* GRAPES, and the
"techno-weenies" *come* from the LANs. They aren't some distant
group who come to town and impose their way of doing things on
the locals. (That way most emphatically does *not* work in a
voluntary organization. Been there, done that, got burned.)

The process is essentially *cooperative collaboration*. The process for continuously keeping maintenence staffed is "each one teach one". In other words, local "weenies" take on local apprentice "weenies" and guide them into becoming full fledged "weenies" too. (Frankly, we prefer the term *wizard*.)

Special Event Station
Saturday, September 21, 1996

Santa Cruz County Amateur Radio Club

K6BJ

Please join us in celebrating 80 years as an amateur radio club. We will operate a special event station at Chews Ridge from 1800 UTC on 21 Sepember 1996 to at least 0200 UTC on 22 September 1996 (11:00 AM to 7:00 PM local time). Local hams, within about 75 miles, can work us at 146.52 or 146.55 MHz. Look for us also at 7.275, 14.075, 14.275, and 28.465 MHz.

Chews Ridge is located in Monterey County, California at the north end of the Los Padres National Forest, at 5000 foot elevation. Approximate coordinates: 36 deg 19 min N by 121 deg 37 min W. For a QSL card, send a self-addressed stamped envelope with your call sign to:

Santa Cruz County Amateur Radio Club
P. O. Box 238
Santa Cruz, CA 95061

73

>the decision making process.

Actually, I don't think we did. First, when they first put the issue on the plate, we asked that it be removed. We were told that the list of frequencies that included amateur bands would not be changed. We did let them know that we would have to oppose it and that our opposition would include grass-roots support. We were told that this is fine. At the time, no one raised any objection to our using the email addresses we had, nor did they offer what was set up later, a specific address at fcc.gov.

All in all, I must admit that there may have been (or may be) some risk to our strong response. I believe, however that a lack of response, or an ineffective one, carried a *certainty* of damage to the Amateur Radio Service. For two important bands such as 2 meters and 70 cm, on which side of the equation should we have erred?

I believe you address the issue with those in elected positions. The
working group I think is composed of appointees and volunteers, not elected
officials (although anyone that knows othewise is welcome to correct
me on this.) I don't believe the response was appropriate given the
target. This committee should be (and perhaps was) given ample
technical arguments for not selecting the two most popular amateur
bands. The writing campaign should have been directed at congress
and included some substantial meat in it as opposed to I suspect
what the working group received. I can imagine some of the
messages given what's been posted here in the past on other issues.

Wow Gary!!

Your post was probably the most lucid and helpful bit (to
a guy such as I am: offical old fart) about the digital modes
I have read! Thank you so much for the food for thought.
Guess I must get busy and learn a bit about Pactor, which
now, from other posts, seems to have two ot three variants;
and, of course Clover, what ever that is. Will probably find
these take some gear I don't now have, though, I think
the Kam Plus I sold might have done Pactor, not sure.
Did do something called G-tor, but never tried it.

My impression now is that not most, but everything I learned
before is now obsolete! (See my note somewhere on here
about the street car control system I was examined about;
even had to take a field trip to SF to view the marvel!). Rather
like the problems on high power AC line transmission I had to
solve: were based upon the Hoover(aka Boulder) Dam transmission
line problems.

I guess this was similar to the req that I pass a test in the German
language: it is good for you in your "liberal" university education.
Wonder if that is a valid argument for continuing CW testing
for HF ham licenses? It is broadening, and helps one appreciate
the culture and language of others!

>Does anyone have a source for this info ? Mike KF6FLQ

Mike,

The US Navy no longer uses CW. Neither does the Coast Guard. As of September 30 all CW transmissions on DoD frequencies are prohibited. This includes MARS stations.

The DoD has become so enamored of computers and digital communications they have forgotten that computers can be disabled by an EMP event. Sending CW by rubbing two wires together is not part of the electronic order of battle they paid the think tanks to develop.

The book that lists MARS ship calls is the Shortwave Directory by Bob Grove. It is sold by Grove, Universal Radio, Gilfer and EEB to name a few. The MARS stations use either PACTOR or AMTOR modes between the ships and shore mailboxes. Other HF comm is encrypted so who cares.

Let me ask a question to the folks proposing better theory testing as a substitute for code testing :

Do you really believe there could ever be a serious technical test which would limit access to the HF bands ? Politically speaking, I mean. I'll grant you that it is possible to write and administer a meaningful technical test.

We have been on the path to "no-theory" exams for quite a while and I find it hard to imagine the imposition of serious theory testing. There are plenty of folks with general/advanced/extra licenses who memorized the questions and have no idea what Ohm's law is.

I expect the result of a no-code HF license would be much more
of a no-code no-theory license.
And I expect that is what many pro-coders really fear will happen.

Me, I'd be happy to have a serious theory test plus a code test - and periodic re-testing too!

>It occurs to me that a fundamental problem is that many, many hams are
>so stuck in the past that anything that wasn't known by everyone in the
>1950s is "exotic", "new", and "radical" ... this is a MAJOR problem.

Most of the techniques we call modern were known 50 years ago.
Even SS. Heddy Lamar invented the first practical DS and FH
systems during WWII. Roosevelt and Churchill used them for their
HF "hot line". Of course today we can do it easier and cheaper
using a couple of chips, but the principle is the same. People
doing it today aren't innovating, they're following.

Since Bell Labs invented the transistor, and TI gave us the
IC, and Intel made it do math, there hasn't been a *radical* new
device for us to use. And since Sam's amp, there has hardly been
a radical new circuit idea from hams or professionals for which
we can't find prior art. (The patent office often can't seem to
recognize prior art, but what did I say about lawyers?)

>>I agree that amateurs continue to advance the art on all fronts.
>
>Damned few do ...

And damned few ever did. That's been true all the way back to the
second crystal set. If you think otherwise, you're just fooling
yourself. Most *people* (not just hams) are born followers. Very
few ever lead the advance. This is even stronger than the 90/10
rule, it's more like the 9,999/1 rule. And it is nearly impossible
to determine a priori which will be which. (Who could have imagined,
for example, that a movie actress would develop spread spectrum, or
naval torpedo guidance systems? She had passed no formal tests,
had no specialized degree, but she had the spark of innovation
that is so very rare.) That's why large numbers are important,

so that at least a few of them may be those rare people who lead
the advance.

Almost all of them will just be users. That's an inevitable consequence
of the distribution. But even users serve a purpose. If nothing else,
they are test loads on the systems. Dr. Rohde says it is due to the
crowding on amateur HF spectrum that modern receivers are as good as
they are. He says no other group of users could duplicate the pressures
of the wartime RF environment better than amateur HFers. Thus they
served as test loads for the new designs.

We've pushed that particular horse about as far as it will go. We
have analog receivers that have sensitivity below the ambient noise
floor, that have the ability to operate in the proximity of strong
signals, and which have the stability and resetability required
for more advanced modulations and protocols. That puts us in the
digital domain, and it is software which will determine the fittest
there.

Usually I do stay out of threads that only involve discussion of US regs
i.e. the on going discussion with respect to the policy objectives of the
amateur service. Those discussion have little to those of us outside of
the US. If I do, however, make comment on US regulations, I usually
preface the remark that I am reluctant to do so, but oftentimes, what is
percieved as international requirement is only a US domestic issue. I
fail to understand that making such point would be considered
unacceptable internference.

Sincerely
Jim

FOR SALE

Marconi Mf/hf synthesized ISB Receiver Type H2540

Technical data

Modes of operation- A1,A2,A2H,A2J,A3A,A3J,A3BA9B

Frequency Range -1.5 to 30 MHz full performance,15 KHz to 1.5MHz reduced performance

Tuning Increment -1 Hz by spin tune control or wheel switches

Frequency Display _Digital Display in 1 Hz increments

Tuning accuracy -+-0.5 Hz relative to tuned frequency

Tuing time -within 5Hz of setup frequency in 0.2 sec

Frequency stability -1 part in 10E8 per day ,less than 1 part in 10E7 over temperature range -10 C to +55 C.Long term typically 1.5 parts in 10E7 per month.

Antenna Input -Wideband input Impedance 50 ohms

Front end protection -the receiver will withstand continuous signal of 30 V emf (50 ohms)

Antenna Radiation -with antenna terminated in 50 ohms radiation is less that 10 microvolts

Noise Factor-1.5-30 MHz better than 11 dB

Image rejection-80 dB

LF Rejection 80 dB

IF Selectivity-ssb/isb (3Khz filter)300-3000 Khz -4db points
-ssb/isb (6 Khz filter)300-6000Khz -4db point
-cw/mcw/fsk passbands selected from the following
300,500,1200 Hz

Headphones -600 ohms for 10 mW output

Metering- af level,agc level and fsk tune

Power Supply 100-250 Vac 45-65 Hz

Dimension Width 19 inches,Height 8.75 inches depth 21 inches weight 55 lb

Operating temp--10 to +55C

Storage temp- -40 to +70C

Humidity -95% at 40C

Altitude -up to 4000 ft

```
FIRST CALL FOR VOTES (of 2)
unmoderated group rec.radio.amateur.boatanchors

Newsgroups line:
rec.radio.amateur.boatanchors Vacuum tube-based amateur radio equipment.

Votes must be received by 23:59:59 UTC, 7 Oct 1996.

This vote is being conducted by a neutral third party. Questions
about this proposal should be directed to the proponent.

Proponent: Rick Stealey <rstealey@attmail.com>
Votetaker: Dave Cornejo <dave@dogwood.com>

RATIONALE: rec.radio.amateur.boatanchors

The term "Boatanchors" refers to equipment (more than 25 years old)
used by amateur radio operators ("hams"). The term is used by hams to
describe equipment which they are particularly fond of, usually for
nostalgic reasons. All over the world, in daily conversations on the
air, hams lovingly refer to old gear they are operating as their
"favorite boatanchor rig". Ususally such discussions involve
locating, restoring, collecting, and finding parts for, old ham radio
equipment. A boatanchor may have been home built, military, or once
produced by a manufacturer long since out of business. In order to
have a Usenet forum for similar discussions,
rec.radio.amateur.boatanchors is proposed.

The term "boatanchor" may not, at first, be descriptive to a person
who is not a ham. Every hobby has terms that are specific to that
particular hobby. Baseball has "dugouts", golf has a "wood", and an
"iron", and British cars have "bonnets". Within amateur radio,
working other stations at long distances could never possibly be
referred to as anything other than "DX". It has been that way for 80
years. Low power operating, likewize, is ONLY known as operating QRP.
In a similar manner, old rigs are referred to the world over by hams
as "boatanchors".

There is increasing interest in boatanchor equipment by hams.
Currently boatanchor discussions are held in rec.radio.misc. A large
variety of specialized topics relating to boatanchor collecting (see
charter) substantiate the need for the proposed new newsgroup. During
the pre-RFD discussion phase there was a substantial amount of
interest in the newsgroup name (over 100 articles). During the RFD
period, discussion concentrated on the charter, and topics to be
included in the newsgroup. Both discussions indicate a great need for
```

and interest in the subject newsgroup.

CHARTER: rec.radio.amateur.boatanchors

The newsgroup, rec.radio.amateur.boatanchors, is primarily for discussions of topics related to classic amateur radio gear. Participation by others who are not licensed radio amateurs are also welcome.

EQUIPMENT.
Appropriate equipment of the boatanchor category includes:
- equipment constructed primarily with vacuum tubes, not solid state devices, and manufactured generally in the post WW II-to-1970 timeframe.
- transmitters (amateur, military, home made)
- receivers (amateur, SWL, military, home made)
- station accessories (keys, bugs, microphones)
- test equipment from the boatanchor era used in the repair and restoration of boatanchors, such as scopes, af and rf generators, meters of all kinds, etc.)
- parts and techniques used in construction of boatanchors (vacuum tubes, condensers, etc.)

TOPICS.
Topics regarding the above equipment built entirely or primarily with vacuum tubes (as opposed to solid state devices) are welcomed in this newsgroup. Suitable boatanchor topics may include:
- collecting
- modifying
- tuning
- obtaining parts (specific requests for parts/equipment are permitted)
- manuals and TM (tech manuals) copies exchange
- restoration and refinishing
- values of boatanchor gear
- sources for parts
- questions and advice for others
- Morse Code operation - advice, legends and lore
- Modes of operation: CW, AM, early SSB
- manufacturing during the boatanchor era, including companies, personalities, and manufacturing techniques
- design and engineering history of equipment of the boatanchor era and comparisons to prior technology (arc- and spark-gap transmitters, Alexanderson alternators, galena detectors, magnetrons, Nixies, quartz crystals).
- other subjects of a historical nature
- commercial postings, if SPECIFICALLY offering products and services DIRECTLY relating to boatanchor collecting.

OFF CHARTER TOPICS.
The following subjects are off topic in this newsgroup:
- discussions of hi-fi, stereo, and/or broadcast receivers. (use rec.antiques.radio+phono and rec.audio.tubes newsgroups)

- antique equipment (use rec.antiques.radio+phono)
- entertainment television receivers
- cross postings from rec.radio.swap
- discussions that are more appropriately held in other rec.radio.amateur newsgroups, such as code vs no-code
- off-topic commercial postings are specifically prohibited from the newsgroup

FAQ.
- A list of Frequently Asked Questions will be developed by volunteers in the newsgroup and will be posted monthly. This FAQ will be helpful to beginers as well as first time visitors to the newsgroup. The FAQ will contain a list of commercial vendors who specialize in products and services of value to boatanchor collectors.

END CHARTER.

HOW TO VOTE

Send E-MAIL to: rrab@infobahn.net

Your e-mail message should contain one and only one of the following statements:
Your e-mail message should contain one and only one of the following statements for each of the groups:

I vote YES on rec.radio.amateur.boatanchors
I vote NO on rec.radio.amateur.boatanchors

You may also vote ABSTAIN or CANCEL; these are not counted as votes and don't affect the vote count.

Anything else will be rejected by the automatic vote counting program. The votetaker will respond to your received ballots with a personal acknowledgment by mail - if you do not receive one within several days, try again. It's your responsibility to make sure your vote is registered correctly.

If you later change your mind you may vote again from the same email address; only your last valid vote will count.

VOTING PROCEDURE NOTES:

Standard Guidelines for voting apply. One person, one vote.
Votes must be mailed directly from the voter to the votetaker.
Anonymous, forwarded or proxy votes are not valid; this includes votes generated by WWW/HTML/CGI forms.

Vote counting is automated. Failure to follow these directions will mean that your vote does not get counted. Duplicate votes are resolved in favor of the most recent valid vote. Addresses and votes of all voters will be published in the final voting results post.

The purpose of a Usenet vote is to determine the genuine interest of persons who would read a proposed newsgroup. Soliciting votes from disinterested parties defeats this purpose. Please do not redistribute this CFV. If you must, direct people to the official CFV as posted to news.announce.newgroups. Distributing pre-marked or otherwise edited copies of this CFV will result in those votes being cancelled. When in doubt, ask the votetaker.

Common errors include quoting the entire article and sending your vote to the vote-takers personal address. Either of these two could result in your vote not being counted.

DISTRIBUTION:

This CFV has been cross-posted to:

rec.radio.amateur.misc

Pointers to the CFV will be posted in these newsgroups:

3201. A Visual perception test

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-16 00:00:00 UTC
From: ssrmrouh@Reading.ac.uk
Message-ID: <51k4ed$bps@susscsc1.reading.ac.uk>
Source record: 216651

Dear fellow,
As a part of a research programme carried out in the Computational Vision Group at the Dept of Computer Science, University of Reading, UK, a visual perception test is being circulated via Internet, the result of which will be used in my thesis (and be sent to you if you so wish). The test contains a number of images which you are requested to interpret. I would be grateful if you could spent a short time (less than 10 min) to fill in the form/questionnaire for this test which is provided at my Web page at the following URL:
http://www.reading.ac.uk/~ssrmrouh/surv_tst/HTML/psy_tst1.html

Thanks in advance,

Behrouz M-Rouhani,
Research student in CAD-based vision, Dept of Computer Science, Reading Univ., UK

Good thing Goering didn't bet the mortgage because he would be sharing
the streets with the dogs. None the less, in the same manner that he is
entitled to use CW in his amateur activities, he is also entitled to
include such life shortening menus in his diet.

Interesting that Goering should mention that newsgroup. Its existence,
like many of his interpretations of US Part 97, have one characteristic
in common - they occupy a great deal of space of an inversely
proportioned intellect.

Am I the only one here who thinks that a solo sailing of the ocean by a *14* year old is pretty stupid, and doesn't deserve a congratulation? It seems to say a lot about his parents, if in fact he has any who care about him... Sure, lets encourage other children to risk their lives for a little bit of attention.

Hi-

I'm looking for some radio gear for winter projects.

In the vacuum tube arena:
Geloso (anything)
TMC (Technical Material Corporation) GPR-90 and SBE-2
Any homebuilt ham or shortwave gear.

Solid state stuff:
ICIR, Cubic, Stoner, Alda, Atlas, Astro, any other early solid state
(Hammerlund, National, etc. also)
Any homebuilt or shortwave gear.

I prefer radios in need of work and priced accordingly but will
look at anything (especially Geloso and TMC!)

Have cash, radios, and datacom gear to trade.

Source record: 216707

I have found a source for those DC power cord plugs. The ones I've got
have 6 pins, male plastic with metal female inserts.

These plugs fit most 12VDC HF radios:
Icom 735 and alike, newer Yaesu and Alinco DX70.
Kenwood TS-120, 130, 140..430, 440, 450..850..TS50, 60, 660, 670..and alike.

Make your own power cord yourself, YOUR WAY!
Crimp or soldered, long or short, heavy gauge, purple with polka dots...

I'm offering the 6 position plug with 6 inserts for $4 each,
or a deal 3 for $10. All prices include postage in the US.

To order, kindly send a check to:

R. Langston
286 Hudson Street
Cornwall-on-Hudson, N.Y. 12520

You can also email me for info at: n2cjj@ibm.net

It's a great deal if you use one rig at home, in the car and at work and
are stuck dragging one power cord all over...

I still can't believe AES and others get $30 for a power cord.

In article <1996Sep15.162914.1@ttd.teradyne.com> rice@ttd.teradyne.com (John Rice) writes:
Jari is also somewhat confused about pilot licensing in the United
States. A pilots license is a 'lifetime' license. True, you must pass
a 'flight review' every two years (among other requirements) in order to
excercise the privileges granted by the license, but you do not loose
the basic license if you fail to do so.

Considering that I am neither american nor a pilot, you might forgive
me my sloppiness on pilot licensing in the USA. In practical terms,
however, I do think that not being allowed to fly due to not taking a
'flight review' is pretty much equal to losing the license
temporarily. (I suppose that getting the privileges back is somewhat easier
or at least far cheaper than getting them the very first time.)

I also do think that if radio amateurs had to take a test every
few years in order to be allowed to operate the radios, then pretty many of us
would have very different opinions about the cw requirement than now.

3210. 4-5 kw Generator Recommendations??

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-16 00:00:00 UTC
From: Doyle.Souders@nsc.com
Message-ID: <DxuF9y.4tx@nsc.nsc.com>
Source record: 216710

I am interested in purchasing a 4-5 KW generator for our Radio Club. Its highest use will most likely be Field Day outings and some other emergency preparedness events. My question is which way to go? The local Home Depot sells 5KW Coleman generators for around $600 and it sells Honda 4 KW generators for around $800. I would like some reports on pros and cons for various 4-5 KW generators in the $500-$900 price range. Any points you could share on picking a reliable generator would be appreciated. Obviously it will not be running continuously but it could have periods where it does run 24-48 hours of near continuous duty. Thanks for the inputs.. Doyle KG6MY

Bill is absolutely correct that mnemonic devices are an impediment to developing true proficiency. However, tapes, too, should be avoided, as should slow code. Yes, no one should even think about learning code at 5 wpm if they EVER want full HF privileges.

3212. TV60 Broadcasters QSO Party

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-16 00:00:00 UTC
From: Chris Packman <Chris@xdinet.demon.co.uk>
Message-ID: <19960916.185357.08@xdinet.demon.co.uk>
Source record: 216712

On the 2nd November 1936 the BBC started the world's first regular high definition television service from Alexandra Palace in North London. The Ariel Radio Group is celebrating this by holding a QSO party on the HF bands over the weekend of the 2nd / 3rd November 1996. Anyone involved in any aspect of broadcasting (ie, TV, radio, cable, satellite,facilities houses and support companies) is encouraged to take part. We hope that during this event a station from the group will be active using our special call for this year GB60BBC, possibly from Alexandra Palace.

This is not a contest but participants are invited to submit logs showing date, time, station worked and broadcast affiliation of station worked (ie: BBC, Granada, C4, NHK, ABC, Sony etc.) a certificate will be awarded to anyone sending in an entry. Entries may be sent either by mail to: Brian Bower, 19 Chapel Road, Flackwell Heath, High Wycombe, Bucks. HP10 9AB or by e-mail to qsop@xdinet.demon.co.uk to arrive by January 1st 1997

The QSO party will start at 00:01 UTC on 2nd November and finish at 23:59 UTC on 3rd November, call CQ TV60 to attract attention. Suggested centres of activity are 3.72Mhz, 7.06Mhz, 14.38Mhz, 18.16Mhz, 21.38Mhz, 24.96Mhz, 28.38Mhz on SSB and 3.53Mhz, 7.03Mhz, 10.135Mhz, 14.055Mhz, 18.075Mhz, 21.075Mhz, 24.905Mhz and 28.075Mhz on CW.

Information about the Ariel Radio Group, newsletters and details of the current GB60BBC operation are available from the group's web site at:- http://www.xdinet.demon.co.uk/ARG/

>73,
>Carl - wa6vse
>carl@ais.net

Carl,
By now you have read my other response to you. As I said you are a "techie", and there is nothing wrong with that. But do not try to force fit everyone into the same mold as you. A majority of the Hams are only interested in operating the radios and providing service to the public. Attacking them is only going to anger them and they will come to detest the idea of trying new technology for fear of "being just like Carl". You may like the idea, but they will not.

I do not know if you have written any articles or presented projects to the industry. But if you want to help the Community then start introducing us to all this new technology that you love and know. A majority of the hams only receive the major Ham publications. When was the last time you saw articles on those subjects. (and Communications Quarterly and QEX don't count, as too few get them). Write articles on the new technology that is out there, develope kits that will help to teach those people who want to learn. Develope radios that use the cutting edge to prove to the nay sayers that it does really work, and will make their life as Hams easier. Do all of this and you will make a positive contribution that will be remebered.

My final thought is this:
Robert Heinlein in his novel "Starship Troopers" said this -

The American Constitution guarantees you the right to the pursuit of happiness, but no where does it guarantee you the right to succeed in your pursuit of it.

And somewhere I remember being told that "that which is not earned but given freely away has no value."

I have been sitting on the sidelines (yeah I stuck my nose out to test the weather), but I have had up to here with both sides of this CRAP!!!

To the those who support the code, we (that means me too) might as well accept that CW has about a 10 year life span before it is dropped as a requirement. That being the case... we better start deciding how we want to influence the FCC to insure that the Amateur Radio Service does not become the CB/Amateur Radio Band.

To the No-Coders, you will win. But ask yourselves while your celebrating did you really want to win like this. If you are not carefull you can fracture the Ham Community, and if that happens we all lose! The Industerial/Communication Services out there will eat us alive then what will we have left. Remember: United we stand, Divided we fall. Not just the "old farts" but all. And if you do not want the equivalent of a CB service then you better figure on how you will insure only those who are willing to work to be Hams are Hams.

That to me is what the Code is all about, a hurdle over which the lazy can not pass. Only those who are willing to put forth the effort should become hams. If we take away the a Code then we need to replace it with another hurdle.

Finally, Carl. After reading your responses I think I know you. We are not that different. You are a "techie", you like being on the cutting edge where things are happening and you can be challanged. The problem is you expect all other hams around you to be the same as you. But it is time to do a reality check. A majority of the hams since the beginning have been appaliance operators. In the old days hams had to build their equipment that is true. They did so from schematics and articles in magazines, whose authors were the Hams who did the actual work. Only a few hams have been at the leading edge of technology. Then there were those who applied the work of those leading edge hams. Finally came the masses. Look at most of the earlier radio companies, they were founded by Hams to make money off of Hams (and the public). As I said you need to look around you realize that most Hams enjoy the hobby/service aspect of Amateur Radio, and not the cutting edge technology.

Lastly, let remind all that a far greater threat lies over our "Hobby", and that is our own goverment. It needs money and is looking at all ways to get it. Even now pressure is being applied to sell our portions of the radio spectrum. Remember: UNITED WE STAND.

Let me end with these final thoughts::
Robert Heinlein in his novel "Starship Troopers" said this -
The American Constitution guarantees you the right to the pursuit of happiness, but no where does it guarantee you the right to succeed in your pursuit of it.

And somewhere I remember being told that "that which is not earned but given freely away has no value."

Do not devalue our Ham License by giving it away, Please.

>the HF bands.

Which just goes to show that even the lids can learn the code. What you
fail to mention is that none of that behavior occures *on* CW (of course,
you'd have to be able to copy the code to know that, right Carl?).

Also, folks are passing the newer fill-in-the-blank N wpm code test quite
easily these days (as opposed to one minute of error-free copy) so of
course we're seeing more lids on HF now. We could actually say that
the code speeds have already been lowered (recall the VE who spoke of
those passing the 13wpm code test who weren't able to copy 7wpm error-free?).

[lots of very angry stuff deleted]

What's the matter Don, fall out of bed on your head this morning?

You don't seem to realize we're having some fun on here, and honing
our debate skills. I admit I'm not one of the better debaters but
believe I'm able to get my opinions across to the nice folks on
here.

I wouldn't dare beat my girlfriend - she's Vietnamese - she'd come
after me with a knife. (Many Asian women, when they get angry, have
a propensity to cut off a male's reproductive organ - they don't
bother debating the issue; thus *never* do anything to anger them.)

You didn't provide a call so we can only assume you're on the outside
looking in. Why not do a week or two of studying and come join the
fun on the air? What goes on here does not represent amateur radio
at all. Also, our speciality groups such as .antenna and .homebrew
make very pleasant reading if you tire of debates.

73 (that means "best regards", Don) from Hawaii,
Jeff KH2PZ / KH6

Why is the primary focus on testing ALWAYS as a means to "limit access
to the HF bands" ???

We need more people, not less ... but yes, they should be qualified to
safely operate radios without hurting themselves or others, and without
causing harmful interference to other services ... that's all.

That's why a reasonable technical test is needed ... a CW test is NOT.

I have recently purchased used an HTX-100 10m SSB/CW rig. I have a few questions to help determine what's the matter with it.

1) On CW, should the Signal/RF Power meter go to '9' or '7' on high power, and '7' or '3' on low power?

2) Shouldn't the meter read when SSB is used an I am speaking in it?

Thanks for your help. I'm just trying to use my HF privs!

This is a repeat performance of the very successful launch which
took place Sept. 7 near Kokomo, IN.

CENTRAL INDIANA REPEATER/ATV/GPS PACKET BALLOON LAUNCH

Region: Central Indiana

Date/Time: Saturday, September 21 / 7:00-8:00 AM
Eastern Standard Time (Indiana local time),
8:00-9:00 AM EDT, 12:00-13:00 UTC

Location: New Augusta, Indiana (Indianapolis suburb
about 7 miles northwest of downtown)

Other states the
signals will
easily reach: Ohio, Illinois, Michigan, Kentucky

Site Coordinates: approximate for initial antenna heading;
(not for navigating to launch site)
39' 53" North Lat.
86' 14" West Long.

ATV: 439.25 MHz AM NTSC from live camera;
VERTICAL polarization.

VHF/UHF Repeater: Input - 144.30 MHz FM
Dual Output - 444.85 MHz FM
- 52.525 MHz FM

Telemetry: 446.00 MHz FM AX.25 1200 baud packet
GPS/APRS position data

HF Net: 3.869 - 3.871 Mhz SSB

Local repeater
talk-in: not yet determined

Other notes: all antennas vertically polarized

From: skubi@rodin.inria.fr
Message-ID: <51mord$hcr@news-rocq.inria.fr>
Source record: 216663
Body handling: HTML body converted to readable text

```
This works on Unix and Unix-like machines only.

Save this message to a file, cut below the line with many ='s,
compile, and learn code.

Permission to copy and redistribute non-commercially is granted under
specific conditions (see below, section SHAREWARE INFORMATION).

Enjoy!

Marcin.

======================================================================

char version[]="$Id: bip.c,v 1.10 1996/03/31 23:25:24 skubi Exp skubi $";
/*
bip.c Marcin Skubiszewski (c) 1996

HOW TO COMPILE bip

bip.c is expected to compile with ANSI C compilers, with C++
compilers, and with K&R (old style) C compilers. With the latter, say
-DOLDCC on command line.

Under systems other than Linux, bip requires Xwindows; say -lX11 when
compiling it.

Under Linux, bip.c can work with or without Xwindows.

- If you do not have Xwindows, say -DNOX instead of "-lX11" when
compiling. The resulting executable will always beep on the console of
the machine where it runs, and will not use Xwindows. It will work
under Linux regardless of whether a given machine has Xwindows installed.

- If you have Xwindows installed, you can either proceed as above,
or say -lX11 when compiling bip.c. In the latter case, the executable
will use Xwindows or the local console, according to whether variable
DISPLAY is set or not at execution time; but it will not run at all on
machines which do not have Xwindows installed.

bip has been tested on the following systems:

SunOS 4.1.3 gcc -O2 bip.c -lX11 -o bip
or: cc -DOLDCC -O bip-oldcc.c -lX11 -o bip

Linux gcc -O2 bip.c -lX11 -o bip
or: gcc -O2 bip.c -DNOX -o bip
```

DEC Alpha OSF/1 gcc -O2 bip.c -lX11 -o bip

AND WHAT IF IT DOES NOT COMPILE ?

Porting

Look above to see whether bip.c has been tested on your system. If
not, some porting may be needed. Just do it, usually it's simple.

If your system is not Linux and you do not have (and have no simple
way to get) Xwindows, bip.c will not run or compile: bip.c uses the X
Windows libX11.a programming interface in order to send beeps. You
must find an interface in your system which allows you to send beeps
of arbitrary durations, and modify bip.c to use this interface instead
of Xwindows. This is harder than porting bip.c to a new platform which
has Xwindows.

Whe you do porting (of any kind)

- you can ask me for help, I will be glad to provide it.
- you are encouraged to consider the results of your porting as your
shareware contribution, and instead of sending money, to send them to me
with permission to redistribute freely.

General thoughts

Check the correctness of your installation of the system. Upgrade if
appropriate (eg., fetch the newest installation of linux).

Specific solutions

If errno.h (or a file included from within errno.h) cannot be found,
just replace the line "#include " with "extern int errno;".

GENERAL DESCRIPTION

A program to learn Morse code. Sends random groups, words from a
user-specified list, or user-provided text.

"bip -H" gives the list of options; "bip -h" gives shareware information

General description:

This program contains the Morse code as in section 30.39 of the ARRL
Handbook 1995, national characters excepted. The encoding is in
global variable morseCode, and its is straightforward to change or
augment it.

When sending externally provided text or words, the full encoding is used.
A newline is treated as whitespace, a blank line is treated as a
paragraph (AL).

When sending random groups, only the specified set of characters is used. By
default, the character set used in French ham exams is in use. See the
description of options in order to change the set. Examples:

```
bip s=eish5 - only send characters e i s h 5
bip su - use the USA ham exam charset
bip s+bbbd - cause b to accur 4 times more frequently than normal,
and d twice more frequently
bip cw13 "s=.,?/+SK AS="
- send American non-alphanumeric chars & prosigns at 13 WPM
hostname | gawk 'BEGIN{FS="\.";}; {print $1;}' | bip q F- d70
- this should be in your .login (DISPLAY must first
be set as appropriate)
```

By default, the program sends random groups of five characters. Option g causes the groups to contain characters instead. Options g and G used together provide for variable-length groups with [n..m] chars.

Option F- causes stdin to be sent instead of random groups.
Option F causes to be sent.
Options W- and W consider stdin (resp.) as a list of blank-and-or-newline separated words, and send these words in a random order.

Speed: options dw and cw (and the more complicated options d, c, w, ww) determine sending speed. I highly recommend the Farhneit method: even if you are a complete beginner, set a fast character speed ("dw15": 15 WPM or "d60": 60 ms, which is roughly equiv.), and make the spacing between characters as big as necessary (eg. "c1500": 1.5 s of silence between consecutive chars, or "cw4": 4 WPM overall speed).

Tone and volume: option p sets the tone (it takes an argument in Hz). Not all machines allow you to change tone. Option P sets the volume (it takes an integer argument between 0 and 100: the % of the maximal possible volume).

Jitter: option j determines jitter, between 0 and 1 (the more jitter, the harder it is to copy). "j0" means no jitter (the default), "j0.3" is strong jitter.

Examples of options:

```
bip dw12 speed 12 WPM
bip dw12 cw5 Fahrein system: each character sent at 12 WPM,
overall speed 5 WPM
bip g3 G10 sends random groups of length chosen
randomly between 3 and 10
stty cbreak; bip q F- dw15; stty cooked
send what you type on the keyboard
```

HOW TO START LEARNING CODE

You can start with learning e i s h 5, individual characters sent at 14 WPM, overall speed 3 WPM. This is accomplished by "bip s=eish5 dw14 cw3". Then, increase overall speed progressively up to 7 WPM, i.e. to "bip s=eish5 dw14 cw7" (you do not change the character speed).

Then, you learn similarly t m o 0. Then, you mix in the previously-learnt characters: "bip s=eish5tmo0tmo0tmo0tmo0tmo0tmo0 dw14 cw3" (t m o 0 appear most of the time, the other characters appear six times less frequently); or "bip s=eish5tmo0 dw14 cw3" (all characters equiprobable).

And so on, until you know the entire charset. Then, with the entire charset, you work speed beyond 7 WPM. For example, to practice for American Extra Class, use "bip su cw18". When practicing for an exam, you may use words, eg. "bip cw18 W/usr/dict/words" or variable-length groups, eg. "bip su cw18 g1 G10".

If, at any stage while learning, you observe that you have special problems with some characters, you increase the relative frequency of these characters until the problem disappears. Eg. if you can't correctly copy b, l and AS, use "bip su 's+bbbbllllAS AS AS AS'.

Be prepared to spend lots of time. For example, learning code for the French exam (10 WPM, groups & cleartext, 1 error/minute allowed) takes up to 100 hours.

SHAREWARE INFORMATION

This is shareware. If you use this program, you have to send me a small reward for developping it. Rewards can take two forms: code or money. You do not need to send both.

CODE: improve this program or port it to a new system or architecture, and send me your code, with permission to reuse freely.
Even small improvements or easy ports will be appreciated.
E-mail: skubi@rodin.inria.fr

MONEY:
- USA residents, please send $7 (international money order) or $10 in cash (this amount is $10 because I prefer money orders and because $7 bills do not exist)
- French residents, envoyez SVP 35 FF (cheque ou mandat postal)
- other nations, please send the equivalent of $7 in the currency of your choice (cash or international money order)

Marcin Skubiszewski
24 rue de l'Oasis
92800 Puteaux, France

Permission is granted to the public to modify, copy and use this program, under the condition that this is not done for profit or commercially. Before you distribute a modified version of the program, the following conditions must be met.

- A copy (in source form) of the modified program must have been sent to the original author, with permission to reuse freely.
- The notices "SHAREWARE INFORMATION", including requests to send code or money to the original author, must remain intact in the modified version. No other request for money (or

```
anything) can be added.
- The modified version must contain a prominent notice saying who
has made the modifications.

To otherwise copy, modify or use the program requires a specific
permission. Ask the author. */

#ifdef OLDCC
#define const
#define P(a) ()
#else
#define P(a) a
#endif
#if (defined(__linux__) || defined(__linux)) && !defined(linux)
#define linux 1
#endif

#if defined(NOX) && !defined(linux)
It does not make sense to define NOX if you are not under Linux.
NOX means that the X11 beeping interface is not used, and this program
has an alternative for this interface only under Linux.

OK, I now understand that Carl is NOT someone proposing better technical
testing in lieu of a CW test - he essentially believes an appliance
operator's license is the way to go. That way his technical buddies
won't have to learn that nasty old CW and his non-technical buddies won't
have to learn CW *or* that nasty old radio technology.

Well, I can't believe adding Carl's good buddies to the bands will
do much to improve ham radio, so how about hearing from someone who
seriously proposes tougher technical testing for advanced privileges?

I'd be glad to see lots more people on the air - lots more technically
qualified people. And I think there are a batch of idiots already
on HF who should be re-tested too.

Why the emphasis on limiting HF access, then ? Not to keep
people out, but to serve as a carrot (incentive) to people to learn
more about ham radio operation and ham radio technology. HF access is
clearly such an incentive, otherwise there wouldn't be so many folks
clamoring to be given a license.

> Carl - wa6vse
> carl@ais.net
Clearly you haven't listened to the CW portion of 40 or 20. It's as
full as the phone band. I don't think you would have as many complaints
as you think on retaking the CW portion every 5 years of so to keep your
license at it's current status. Many would welcome the opportunity.
Once you've got the code down it's with you forever. A little brush-up
for some, and no problem.

To all radio amateurs

SB QST ARL ARLB063
ARLB063 WA2LQQ, SK

Former AMSAT-NA president and QST columnist and author Vern ''Rip''
Riportella, WA2LQQ, of Warwick, New York, died September 13, 1996,
of an apparent heart attack. He was 52. A former US Air Force
officer, Riportella was the third president of AMSAT-NA and served
from 1984 until 1987, and he's credited with being a prime mover
behind OSCARs 10 and 13. ''Rip'' served for a time as QST's Amateur
Satellite Communications column editor and wrote several articles
for QST on satellites. He also founded the AMSAT Satellite Report
(now the OSCAR Satellite Report).

In more recent years, he was involved in the installation and
upgrading of packet radio equipment aboard the Russian space
station, Mir. Services will be private. His wife, Ellen, survives.
Condolences may be sent in care of the Strong-Basile Memorial
Chapel, 75 Main St, Warwick, NY 10990 or to the family's mailing
address, Box 177, Warwick, NY 10990.

They don't exist. That's the whole point of the tight front-end of the radio, and why it doesn't experience intermod, like most of the Gameboy HT's sold these days.

In my experience there is NO comparison between the two. Unless you really need 5kw, go with the Honda. They are quieter & more reliable. Our Explorer post has had one for years. Often it is "ridden hard and put away wet". It never fails to run, even with the carb half full of water and rust. The Coleman is a good unit, but it's like comparing a Model A and a Mercedes. Years from now the Honda will be well worth the extra $$$.

When is the York, PA Hamfest this year? I never picked up a flyer at earlier hamfests this summer. I presume it's still sometime in the second half of September.

Thanks,

Chris N3JLY

Hi.

I have a Heath HW2P HT and need a new battery pack. I would like to get
a new battery and I'd like to make an adapter so I can use a 12v power
suppy. I bought a perphex (sp) battery pack and I didn't last very long.
Any help is appreciated.
Tnx
Bob

> where I can get copies of the mentionned "WILLIAM SHEETS" ?

Rudolph Graf & William Sheets have co-authored many books including
5 or maybe by now 6 large volumes called Electronic Encylopedia. They
are also engineers who design many circuits for hams and experimentors
including ATV, audio, RF etc. They sell kits for their circuits from
a company called North Country Radio, PO Box 53, Wykagyl Station, NY
10804, USA. You could probably contact Rudy Graf at this address or
via McGraw Hill whose address is in that book you have. I've built
several of their circuits. All have worked great.

Each day you can receive by e-mail all the latest rec.radio.swap postings, and the latest classified postings from the Raymond Sarrio Company's Classified page. Both classified pages post 100's of classified ads each day for used ham radio equipment.

Why should I receiver this serve?

There are 2 reasons why an e-mailed classified page is worth subscribing to....

First, we all check our e-mail regularly, but many of us only check into the classifieds sporadically. Over 100 new postings are placed each day on both classified services. If you miss one or two days of postings you can miss out on some great deals. Many internet service providers only keep 3-5 days of posting on-line. Great equipment deals, that you've been looking for, can easily pass you by without this e-mail option.

The 2nd reason concerns all those who have to pay their internet service provider based on usage time. The major commercial on-line services (ie.Prodigy. AOL, and Compuserve) all charge by usage time. That time can quickly add up. However, when you receive the postings by e-mail you can read all the posts off-line saving you big bucks over the course of a year. You can search the classified posts quickly by searching by keywords through your e-mail's "FIND" command.

What does it cost?

A years subscription is only $18, just $1.50 per-month.

Grand Opening Special

If you are one of the first 100 subscribers, you will receive a full years subscription for only $12, a 33% discount off the regular subscription rate.

How do I subscribe?

All major credit cards are accpted (visa, M/C, Discover, and Am. Exp.) Just call the Raymond Sarrio Company's 24 hour order line at 1-800-413-1129. You can fax orders to 909-484-5125. International orders can be placed by calling 909-413-1129.

true true..

i can understand YOUR view point and that other guys point (R.F.G)

BUT this is life

you dont HAVE to pay $40 $50 for stuff that is really CHEAP....

thats why i built a link cable for my TI-85 to my computer, cost me $1
at radio shack, they sell it for $40 or $50 !!!!!

you think pirated software makes prices go higher?
your WRONG
Software companies are riping us off charging us $100 for crapy
software.. its all business

anyways, 5 minuets wasted explainging

^^
Many thanks to Tom for posting this previously, I have used this list
to great
effect, and have looked-up mods for others posting requests here...but
I've
got other things to do, so folks, go hunt 'em down. For whatever
reason,
archie dosen't report many of these locations, so this list is a
necessity.

Now maybe we will see a reduction in redundant requests for mods?
If you don't know what this list is for, and you have a real (not just
UUCP
dial-up) internet connection ask someone who knows about "anonymous
ftp"

Even if you only have a dial-up, most listservs honor e-mail requests
for
files--if you know just where they are directorywise.

Ciao,
Michael Dahl
Again, thanks Tom!

The Associated Radio Amateurs of Southern New England (ARASNE)
will operate a special event station on Saturday, September 21st
and Sunday, September 22nd, in comemmeration of the club's 70th
Anniversary this year.

Operating under the club's callsign, W1AQ, the special event station
will operate from 1300Z (9AM local time) Saturday until 2300Z (7PM
local time) on Sunday evening. Expected frequencies of operation
include 3.860, 7.225, 14.280, and 21.300.

QSL cards are available with SASE. For 8.5x11 color certificate,
include large sized manilla envelope with postage.

Open House

For amateurs in the local area, the ARASNE club-house will be open
to the public during the special event station operation. Local
amateurs are welcome to visit the clubhouse.

Dave,

I presume that by "slow code" and "5 wpm" you mean 5 wpm at a CHARACTER
speed of 5 wpm. I see nothing wrong with learning 5 wpm code if the
character speed is, say, 13 wpm.

When you switch from talking about Morse Code to CW are you just being imprecise? They're normally interchangeable, but not when talking historically. The first Morse-encoded Continuous Wave (nondamped) devices appeared around the end of the last century, and most of them (the arc transmitters) were actually FSK devices, since on key-up the carrier wasn't stopped, just shifted in frequency.

While it's true (and I didn't say otherwise) that the telegraph was used before 1890, so electrical voice transmission also occurred before 1915. It seemed to me we were talking about RF signalling, not electrical signaling in general. Otherwise, take 40 or so years off both dates, if you think it clarifies anything. Both 1874 and 1915 are a far cry from "the 1950s or thereabouts".

My experience is the oposite of Gary's. I used west tapes...found they
could only get me to around 7wpm. I got code quick and never hesitated
on my way to 25wpm in approximately 60 days

>in their captives. Conditioning the brain to be a 20 WPM Morse

>it may take longer without the incentive of repeated beatings
>and constant fear of death.)
I always figured that learning engineering was best incentivized by
beatings etc. no experience with this as a code learning technique.
I'll have to defer to Gary on this one.

Actually Mike, SSB was in use on the transoceanic telephone lines as
early as 1915 (recall the thread from several months ago). CW didn't
get going until the early 20s.

Lots of things that we still use today are much older than CW such as
lightbulbs, telephones, automobiles, and airplanes.

: 73 Jerry

You do if you want to use MP-QSD (meson-photon quantum state decoupling).
That's the new mode that makes digital and spread spectrum obsolete.
The only problem is that it is useless on waves shorter than 10 metres.
... and the CW requirement is keeping all these theoretical physicists
who can contribute _so much_ to our hobby off HF. sob sob!

Jim,

You're far to polite to your detractor(s) ... feel free to voice your
views ... US positions at WARCs affect the entire world ... whether
rightly so or not ... if the US delegation opposes removal of the CW
requirement from the treaty, it may well stand ... so speak your mind.

>TNC-based kluges should be abandoned

Uh, waitaminit. IP has to be carried by SOMETHING from router to router,
or host to host. Casting it into the wind in raw form doesn't work real
well.

You want a reliable link protocol to carry IP; right now AX.25 does this
as well as anything else we have. Certainly there are BETTER ways to do
it and the rules shouldn't specify what, but don't confuse one level of
the protocol with another!

The advanced ham networking people have been seriously discussing using
PPP over connected-mode AX.25 as an entry-level protocol stack, and
there are a number of good reasons for doing so. For the casual ham
users, this isn't bad. At 9600 bps, it'd work acceptably well for
a lot of occasional dabblers in digital ham radio.

Nothing works well at 1200 bps and slower. Carrier pigeon would be faster.

The ham network, if it ever is to exist, will require something better
than 9600, of course.

Now that's a problem with incentive licensing I had not been aware of.
I've been working for an Extra (unsuccessfully) because so much of the DX
is on the Extra-class bands. If what you say is true, then if I were to
live where you do, I wouldn't be able to talk to much of anyone due to
these band-plan differences. Surely it cannot have been then intent,
even of the ARRL back in the 60's, to make it so one "needed [an Extra
Class License] to operate" in any part of the USA.

The International Morse Code (BTW, there isn't just one "Morse Code")
was first used in wireless communications in the 1890s. SSB was
demonstrated in 1915, while AM was demonstrated in 1901.

3260. 610V deliveries

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-17 00:00:00 UTC
From: jbmitch@vt.edu
Message-ID: <51l4hu$qn9@solaris.cc.vt.edu>
Source record: 216729

FWIW, I talked with the FCC poc for the vanity program recently and learned the following:

All 610V forms received by the lock box agent in Pittsburgh will be date stamped only. The time order in which they are received there will not have any effect on when they are processed. Any 610V date stamped for September 23 will have as much chance as any other to be near the top of the pile.

This is posted so those considering extra expense, such as driving to the delivery point, standing in some line out front waiting for the doors to open so as to gain an advantage might consider less expensive and time consuming means to ensure their form arrives sometime on the 23rd. I plan to use US mail, two day guaranteed delivery, and postmark on Friday.

BTW, the FCC has only one, that's right, one full time person in charge of entering all of the 610Vs!!! Expect some long delays in processing the deluge that will surely hit Monday the 23rd.

The telegraph was used long before 1890. CW has been around for how
long? Samuel Morse died in 1872. My dictionary implies CW was invented
in 1867. CW is 129 years old, if this info is correct.

> times you say it and click your heels together ...

I haven't read any 'factual presentations' either, Carl. I have read a lot
of opinions. If you have an opinion, and you type it enuff times, does that
change it to a 'factual presentation' ? Maybe in your book, but not in mine.

>> Cheapest is that HAM is all about.

>Now this part you've got right ... at least if you're talking about the
>"old guard" ... they ARE too cheap to invest in modern gear ... that's
>one of the reasons they're still using CW (and 1200 baud AFSK packet
>for that matter).

Sorry, Carl, but I don't think we can accept that statement as a 'factual
presentation' either. Personally, I think I have probably spent more money
on ham gear by accident than most technicians have spent on purpose.
What 'modern gear' would you like us to invest in that we don't already
have ? For that matter, what 'modern gear' is available ? I don't see anything
advertised in the AES catalog that wasn't there four or five years ago.

>The Q signals are perfectly suited for conveying the limited number of
>concepts consistent with moronic intelligence levels ... perhaps that's
>why they're common with CW ops and SSB lids ... I'd prefer to have a
>bit more flexibility to carry on an intelligent conversation myself.

OK. So now everyone who uses Q codes on either SSB or CW is a
moron ? That should include about 95% of the ham population .....

>There is absolutely NO redeeming value in "UR 599 in ____, RIG HR is
>____, TNX FER QSO ES 73, CUL" ... this sort of "QSO" is an absolute
>abomination, a waste of spectrum, and does NOTHING to forward the
>purposes for which the Amateur Radio Service was established.

Sure it does. It's just a part of the hobby you don't understand. It's
called DX'ing. It's something that a lot of people, worldwide, enjoy.
We could say the same thing about PACKET BBS FORWARDING
now, couldn't we ? Absolute abomination, waste of spectrum and
does nothing usefull at all. That's a pretty good description of the
packet network, I would say. All headers and no meat.

>As I've said before, digital systems are ROUTINELY transmitting data
>over paths of several THOUSAND miles, day in and day out, using powers
>in the 10 MILLI-Watt range ... CW is junk in comparison with the
>modern technologies available in today's world, pure and simple.

You've said it many times before. But that doesn't make it a 'factual presentation'. For all I know, it's something you dreamed one nite after you ate some cucumbers.

So please amaze us with some facts, Carl. WHO on the ham bands (list of call signs would be OK) is using WHAT digital system (what's it called) that's being used day in and day out ON THE HAM BANDS (what bands) in the 10 mw range over paths of several thousand miles ? If you would please just provide us with those FACTS, then maybe we could accept it as a 'factual presentation' instead of gas caused by something you ate.

Robert Modenhaur (dragoman@geocities.com) never bothered to notice that I was NOT the original poster. That didn't stop him from bashing me anyway because I posted that comment from work, where I've posted a grand total of six messages in 3 1/2 years. But contrary to his statement that I don't know anything about the Internet, and contrary to his inability to follow the thread of the posting and note that I was REPLYING to someone who had posted to the wrong wa.* newsgroup and pointing out that it wasn't that big of deal... I will also note that I know a lot about the Internet as the operator of www.hamradio-online.com, probably the #1 ham radio web site in the world. I've also been active on the Internet for about 12 to 13 years, probably longer than 95% of today's net users. Interestingly, we offered an explanation to Robert, in private but he didn't bother to reply to the email.

We are voluntarily working hard, at our own expense, to promote ham radio using a classy web site that features genuine content instead of pointers to other people's web sites containing pointers to .... well you get the picture. We

know we are doing a lot right on the Internet judging from the tens of thousands of people world wide, in 44 countries, who regularly visit our web site.

And once again, the proposed law in Washington State, requiring that the State Patrol certify all mobile radios (receivers, transmitters and transceivers) is a frightening bureaucratic nightmare. We suspect that the text of the ruling was probably written by a mindless twit, but who knows? They may use the poorly written and broad law to prohibit scanners, radar receivers and who knows what else - may be even ham radio? Even if that is not their intent, the ruling is broad enough that it could lead to that. That's why, per the original post, many of us have written our state representatives and the State Patrol asking them to nuke this stupid proposal at their upcoming hearing on October 9th.

>
>Carl - wa6vse
>carl@ais.net

I agree with this.

The amateur service is the only radio service which permits its operators to operate non-type-accepted equipment. I think the idea is to have people who are sufficiently technically competent that they don't wreak havoc.

I am one of those crazy people who likes to go up on hilltops with homebrew microwave equipment. If I had no concern for the quality of my signal or didn't know how to test it, I could conceivably end up getting into some commercial microwave system when I transmit. I sure wouldn't want that!

Perhaps since the VE program has made it easier to take an amateur exam, some practical demonstration should be part of a test. Something like demonstrating knowledge of the use of a voltmeter, frequency counter, GDO etc.

Yes, but harder on the rotator.

Why not rotate the whole tower? The rotator is at the ground level so
repairing it is relatively easy. Having the rotator down allows you to
make it yourself using much stronger materials that are used in
commercial rotators.

SILENT KEY

IT IS WITH DEEP REGRET WE ANNOUNCE THE PASSING OF JIM BOYD
ZL1KN EARLY IN AUGUST FOLLOWING A LONG ILLNESS.

JIM WAS A LONG-TIME MEMBER OF ANARTS, BUT HAD HAD TO CURTAIL
HIS ACTIVITY IN RECENT YEARS OWING TO HIS ILL-HEALTH.

JIM WAS BORN IN ROTORUA 76 YEARS AGO. HE JOINED POST AND
TELEGRAPHS IN NEW ZEALAND IN 1936. WHEN THE WAR STARTED HE
BECAME AN AIR-TRAFFIC CONTROLLER IN THE PACIFIC AREA. HE
PURSUED THIS CAREER AFTER THE WAR IN CIVIL AVIATION, AND
WORKED IN NEW ZEALAND AND AROUND THE SOUTHERN PACIFIC BASIN.

ON RETIREMENT, JIM RETURNED TO ROTORUA AND ENJOYED HIS HOBBY
OF AMATEUR RADIO. JOHN IS SURVIVED BY HIS WIFE, JENNI.

VALE JIM BOYD ZL1KN

COMPILED FROM INFORMATION GIVEN TO ANARTS BY MURRAY ZL1SY.

Some Initial Thoughts On H.F. Clover Operations, By VK6CW

I have recently acquired a Hal Communications P38 Clover modem
This modem operates the following modes .. CLOVER .. PACTOR ..
AMTOR .. AND RTTY .. Hal Communications does not consider that
running PACKET RADIO on H.F. is a suitable mode , and
therefore it is not included ...

The clover mode differs from the normal H.F. digital modes in
that is does not include the normal MARK and SPACE tones which
for a PK-232 is 2100 hertz mark and 2300 hertz space tone.
Clover uses four Audio tones fed into the Microphone socket
and is fairly simple to set up and adjust for correct
operation ..

Using Express software , which is windows based I have worked
JA3BN with the following interesting results ..
Taka was able to carry on a Half duplex qso with me while
transferring a PICTURE of himself at the same time , this
appears in the left hand bottom corner of the screen the size
being about two inches by two inches ..or 45 by 45 cm approx
I am told that every time I now have a qso with Taka this
picture will be retrieved from the directory ..

As soon as I can get a suitable Picture of myself this will
also then be sent to who ever I connect with on CLOVER during
the normal course of the HALF duplex qso with them ..

The DIGITAL SIGNAL PROCESSING is extremely sharp and requires
accurate netting , this is acommplished By the ON SCREEN
tunning bars which indicate the relative difference in the
received signal and your transmitted signal ..

There are many other bells and whistles included in this
software . some of which include AUTOMATIC POWER OUTPUT
ADJUSTMENT according to band conditions
Fully automated control of the transceiver by the computer if
you have the necessary interface , this means the transceiver
frequency is automatically adjusted to the incoming signal

A record of all qso/os kept in the log automatically
Full mail box Facilities
Automatic Baud rate adjustment depending on band conditions
Just to mention a few of things this exciting mode can perform

It is early days for me having only had a few qso/os .. but
the Clover mode of operation on H.F is really Impressive to me
as some one who has operated almost all DIGITAL modes on H.F.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(06 SEPTEMBER - 12 SEPTEMBER

ISSUED ON 13 SEPTEMBER 1996

SUMMARY
Date 06 07 08 09 10 11 12
10cm 70 70 68 68 68 68 68
A 6 8 6 7 34 20 (20 estimated)
T 12 5 -1 3 13 7 4

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS ACTIVE TO QUIET ON 6TH SEPTEMBER, QUIET TO UNSETTLED 7TH TO 9TH, AND 11TH; UNSETTLED TO ACTIVE 10TH AND 12TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES ALL WEEK.

FORECAST (13 SEPTEMBER - 19 SEPTEMBER)

GEOMAGNETIC: QUIET TO UNSETTLED.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

UNFORTUNATELY WE DO NOT HAVE THE VK2SG RTTY DXNOTES FOR THIS WEEK, PERHAPS NEXT TIME.

ARLD040 DX NEWS

THIS WEEK'S BULLETIN WAS MADE PO9SSIBLE WITH INFO PROVIDED BY MAURO, I1JQJ, THE 425 DX NEWS, TEDD, KB8NW, THE OPDX BULLETIN, ANTOINE, 3D2AG, CHRIS, G4BUE, THE DX NEWS SHEET AND CONTEST CORRAL FROM QST. THANKS TO ALL.

EQUATORIAL GUINEA, 3C1. EA6BH, WILL BE ACTIVE FROM COGO OCTOBER 16 TO 22 AS 3C1DX. TRY 3005, 7005, 14005, 21005, AND 28005 KHZ FOR CW, AND 14195, 21195, AND 28495 KHZ FOR SSB. SOME RTTY IS POSSIBLE ON 14088 KHZ. QSL VIA EA6BH.

UGANDA, 5X. PETER, 5X1T, WILL BE BACK ON THE AIR IN EARNEST STARTING SEPTEMBER 7. HE PLANS TO GET ON BOTH 160 AND 80 METERS.

MALDIVES, 8Q. LISTEN FOR ANDY, G4VPM, SIGNING 8Q7AS SEPTEMBER 8 TO 22. HE WILL RUN QRP TO A VERTICAL. QSL VIA CBA. EAST MALAYSIA, 9M6. STAY, JE1JKL, OPERATES 9M6NA FROM LABUAN ISLAND.

BURUNDI, 9U. ALFREDO, 9U5CW, HAS DECIDED TO TEMPORARILY SUSPEND HIS HAM ACTIVITIES DUE TO SECURITY CONCERNS.

ROTUMA ISLAND, 3D2. THER DXPEDITION PLANNED BY 3D2AG HAS BEEN POSTPONED UNTIL LATE OCTOBER OR NOVEMBER. 80 THROUGH 10 METER CW AND SSB WILL BE WORKED, AND POSSIBLY SOME 160 METERS AND RTTY. QSL VIA CBA OF 3D2AG ONLY.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 269

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, AE4MK, K4CEF, KJ4VH, W4/YV5DTA, KH6BZF, NL7TB, K7EHI, K8HVT, WB9YXY, A35RK, DK9IP, EA3BHK, G4BUE & the DX News Sheet, JA6VZB, LU1DZ, PT2NP and SM0DJZ following DX information.

9Q, REP. OF ZAIRE. Fernando, EA4BB, informs OPDX that he will be working as an architect in Zaire for 1 year starting September 9th. He has been issued the call 9Q5BB, and has already sent a copy of the license to the DXCC authority in Newington, CT.

A35, TONGA (Update from Paul Kidd, A35RK). Paul reports that he has been off the air for the last two weeks while he was up in the Ha'apai Island Group, but he is back in Nuku'alofa now and is active on 40-15M CW/RTTY. Paul states in that 2-3 weeks he will be re-locating to Lifuka Island in Ha'apai. He has rented a house there 20 steps from the beach, and he should be active from there by October 1st. By the way, the Ha'apai Group is IOTA OC-169. He states he is still waiting for the Force 12 antenna "package", and it should be arriving there soon. This will enable him to get on 80-10 meters with a decent signal (being right on the "saltwater groundplane").

A4, OMAN. The DX News Sheet reports Tony, A45ZN, is active 4 to 5 nights a week on 160 and 80 meters with 400 watts and a trapped dipole. He does not have permission for 6 meters, but monitors 50110 kHz. He is still awaiting the outcome of his application for an experimental licence for 6 and 30 meters.

C6, BAHAMAS. Fred, K9VV, will be active from Sugar Loaf Cay, September 13-22nd. He will be active in the WAE SSB Contest, as K9VV/C6A (or possibly a C6 callsign). QSL via CBA.

JOHN ALEXANDER, K6SVL SK. It is with great sorrow to report that K6SVL has become a silent key (SK) this past weekend. John served as DXAC Rep Southwestern Division and his present on the committee will surely be missed. Members of NODXA, NOARS and the contributors of the OPDXB send out our deep sympathy.

JY8, JORDAN. Bob, WB9YXY, will once again be visiting friends in Jordan and reactivating his call sign JY8XY. He is expected to be active from October 1-20th and his operations

will be on CW and SBB with activity on 80-10 meters (with the exception of the WARC bands). Like last year, emphasis will again be given to CW. He will have two stations available, both TS-830s; one with a TH6, low band antennas, and amp; the other at a different location with a TH3. The chances of getting an antenna erected for 160 meters are slim due to space limitations, but Bob will reevaluate the situation and if there is any way possible to get on the band, he will. Bob also states you may hear him operating from a neighboring country or two as well as he hopes to have time to visit some friends in the other regions. QSL (w/SASE) to home call WB9YXY and they will be answered immediately upon his return.

PJ9, BONAIRE (Netherlands Antilles). PJ9T will be a Multi/Single entry in the CQ WW SSB Contest, October 26-27th. Bonaire has an IOTA of SA-006. Operators will include AB4JI, K4ADK, KJ4VH, KU4J, N4OKX and WA4DPU. They will be signing PJ2/ before and after the contest October 19-29th (QSL via home call signs). QSL PJ9T via AB4JI.

ZL7PR PIRATE FROM CHATHAM ISLAND. W4FOA spoke with Jim, VK9NS, and he confirms that Peter, ZL7PR is indeed a pirate. This same operator has been known to use ZK3YA's callsign (a legitimate YL operator on ZK3), plus others including VR8B, etc. Jim is working with some ZL authorities in an effort to close this station down. Some of his operating habits include the use of "ere" for here, frequent use of "OC", works phantom DX stations - often some prefixes that no longer exist ie. UF6 etc). He also never gives any QSL info whereas ZK3YA always gives her name/QSL route and often tells she is a teacher on ZK for 3 more years.

ZV0, TRINDADE & MARTIN VAZ ISLAND. Stuckert/PT2GTI, Lunkes/PT2HF and Paul/PT2NP from the ABRA-DX Brazilian Association, will be active after the first week of October on both SSB and CW. QSL info will be PT2DX, the callsign of ABRA (OK in CBA). The team already has been issued the callsigns ZV0MB and ZV0MV. The group will have one more meeting with Brazilian Navy Authorities to work out the final details for this DXpedition. They will carry the team by helicopter to the island, which is a big rock of about 130 meters high over Atlantic Ocean. It will be the first operation in the history of that island and the first time that somebody inhabited it.

ARRL Magazine QEX

Could any VK Amateur help please with a copy of the article, by Johan Forrer, KC7WW, in an issue of "QEX", date unknown, where the author describes a RTTY/PACTOR Converter.

I would welcome information and would cover costs of copy and postage if anyone can help.

Thanks from Rob Gurr, VK5RG, 35 Grandview Ave., URRBRAE SA 5064.

Well Carl, you just made the case for a "no code, no theory" examination.
If the only purpose of the test is to "safely operate radios" and not
cause harmful interference, then you can boil the entire 5 technical
examinations we have today down to a single 10-question multiple-choice
exam.

Hi Jack
The way I have heard it explained is that having the antennas on a
crossboom balance out the wind effects. I have a pair of 17 emement 33'
long 2 meter yagis mounted on an 11 foot long fiberglass crossboom that
work quite well.(92 qso's & 37 grids last weekend during the contest)

Although I can't recommend a specific generator, I can offer a suggestion. Ask some of the local building contractors in your area what they think. I used to work for some and saw a wide varety of the generators you're talking about. We used them every day, dropped them in mud, off trucks, ran them in downpours, 10 below temperatures, forgot to check oil levels (oops) and all sort of terrible things that shouldn't happen to any "tool" you use.

Just a few comments from experience, Honda's always seem to start with the fewest pulls, get something with an oil level sensor, put in a ground rod (use a water pipe etc) when possible, and _DO_ the recommended maintainence. I've seen more than one (most brands) seize up and become backfill before the job was done. And if you don't use it much pull it out once a month or more and run it for an hour, sitting idle for too long seems to make them cranky. (all puns intended) Good Luck,

Carl is right. I don't think the current theory test really addresses
the question of safe operation in any depth. How to determine if you
have RF on your chassis. What to do about it. How to determine if you
are emitting harmonics. What is a safe distance from HF antennas at
different power ratings. What specifically happens to one if he comes
in contact with an active HF antenna at different power ratings.
How much power can one run in an apartment without endangering
people. How to position a mobile hi-power antenna for safe operation.

Not to mention detailed specifics on antenna design. pros and cons of
each design type. More indepth information on the different emerging
digital transmission modes.

And much more.

>lives for a little bit of attention.

There was a time, not all that long ago, when 14 was considered as
being a second class adult. Fourteen year olds were expected to
work, either at an adult job or apprenticed to a master craftsman
to learn an adult job, and they often set off on their own to homestead
or otherwise make their own way in the world. They were also treated as
adult if they committed criminal acts, and were hung just as readily
as older criminals. It is a fairly recent conceit that a teenager should
be treated as still a child not responsible for his own actions.

One of the results of that conceit is that we now have teenagers
with no concept of responsibility. Since they are treated as
children, they behave as children. But because many of them are
large, they are uncontrollable as children, so they become the
large vicious animals who prowl our darkened streets and alleys
rather than the small manageable animals held in check in the
home that children normally are. They haven't needed to assume
adult behavior because they haven't been required to shoulder
adult responsibility. (If a child hasn't been broken to harness
by age 12, he probably never can be fully civilized, and should
probably be put down like any other ungovernable creature.)

I'd suggest our master mariner has parents who don't subscribe
to this latter day conceit of teenagers as still being irresponsible
children, and have let him behave as an adult, and assume adult
responsibility for his own actions. That's probably a good thing,
whether he measured up to the challenge as he apparently has, or
whether he wound up sleeping with the fish.

>together is not part of the electronic order of battle they
>paid the think tanks to develop.

And correctly so. Any EMP that puts down the (well protected)
computers beyond immediate repair, would certainly also get the
radios and most if not all of the effective combat power of the
vessel (which is also heavily based on modern electronics). A
modern navy is no longer iron men on wooden ships. If the high
tech goes, the vessel becomes just a haven for survivors,
something for which resources have to be diverted rather than
something which is itself a combat resource.

At the intensity and pace of modern combat, particularly a
combat which has gone nuclear, there are no resources, and
no time, to spare for survivors. Any vessel unable to defend
itself is likely destined for the bottom in very short order.

And the threats against which it must defend itself are ship
killer missiles launched from over 100 miles out, or ship killer
torpedos which swim in from 20 miles out. If the electronics aren't
working (radars, sonars, computers, fire control for the Phalanx,
guidance for the Standard AA missiles, etc), it won't do any good
to beep a bit of Morse, except maybe to tell your comrades a final
goodbye before the next wave of missiles strike or the next torpedo
homes in.

Even if you managed to survive the battle (perhaps by taking the
last hits in an exchange), emitting a CW signal would be like
shouting to the world "here I am, come kill me" to any Elint

receiver in the area, or in orbit. And the next EMP will be from
the missile aimed right down your throat. A CW signal would stand
out in the SS grass like a redwood on the prairie.

But, John, I was told at the time we engineers-to-be had to "liberally"
educated, else we might not be well rounded individuals. Well, some
45 years later, I certainly am more round than I was then!! One of
my great disappointments with my long engineering career, mostly in
microwaves, was the nearly trivial amount of my math/physics education
that was actually ever used! Recall only one time being faced with
a situation when I had to sit down, pull out Ramo&Whinnery and
figure out the boundary conditions to put to a partial diff. equation I
needed to solve! I would guess that 70% of math and other stuff I
was forced to learn and be examined on was NEVER of any use!
Maybe that was also part of the liberal education. Had I gone on
to work toward the fud. degree, all the math may have been of use,
but for practical engineering problems, at least what I was doing,
not.

And, yes, Hugh Skilling would not allow my degree to be awarded
until I stayed at the U one more quarter to take the required
Philosphy course I had "overlooked" several years earlier!

73, Jim, AH6NB (for a few more weeks, probably)

>best, only a few years younger than the other" ???

Morse was first used in 1838, a little over 150 years ago, but that was on wire. It's only about 100 years old on radio. The wirelines started abandoning Morse on a large scale in the 1920s, and by the 1950s had abandoned it completely for the teletype (which has now itself been fully obsoleted by computer to computer networks). And abandonment of radio usage of Morse by everyone except amateurs has basically been completed this year, and will be finished for sure by 1999.

SSB was used by the Bell System starting around 1928, so it's about 68 years old. It didn't become popular among *amateurs* until the late 1950s (though there were a few pre-WWII experiments by amateurs). Your continuing complaint that amateurs generally lag behind isn't really justified in this case, nobody else other than the Bell System was making use of SSB on a large scale before the 50s either. The technology wasn't ready for large scale use.

SAC started using SSB at the same time amateurs did, and for the same reason, Collins produced a radio small enough, cheap enough, and stable enough to make it practical. (It was really the Collins mechanical filter that first made SSB practical for installations without continuous technician support to keep it tweaked.)

The Bell System started phasing out SSB in the late 1960s, moving to digital mux on undersea cables and satellites. There are still a couple of SSB circuits left in out of the way corners of the globe, but they'll be gone shortly. Other users of SSB are still going strong,

but I expect that they'll start phasing out in favor of digital in the years ahead. I doubt SSB will hang around 150 years. Technology is moving much more rapidly today than it did during the heyday of Morse.

I expect most SSB outside the amateur bands will be gone in another 20 years. I'm not 100% comfortable with that prediction, consider that aviation still uses AM for example, but I think it will be generally true except perhaps for special niches.

While FM dates back to about the same time as SSB, and also started gaining wide scale use post-WWII, it is likely to hang around longer than SSB. The equipment is simple and cheap, and AFC and capture make it operator friendly. Those are powerful advantages for the uses to which it is put.

No doubt digital systems, particularly SS, will eventually obsolete SSB and FM. The sharing advantages are just too compelling to ignore, and the technology is getting cheaper. It won't be long before the cost differential between conventional FM and SS will only be pennies, we're probably already at that point with SS and SSB today, and microprocessor control can make any radio operator friendly.

Have I misunderstood? Are you suggesting that the fact that you had to do a Morse code exam caused you to enter the hobby? I guess what you meant is that your interest in homebrew CW got you interested.

Having a Morse exam does not mean that there will be Morse operators out there - many people forget Morse soon after passing the test. It is the fact that some people LIKE Morse that ensures there are Morse operators, not the exam.

The reason for including a topic in a licence examination should not be based on a person's, or group of people's personal interests. It should be based on what the licencee is REQUIRED to do, or continue to know, AFTER the exam has been passed.

To illustrate my point, if an amateur uses a transmitter outside of the band, or builds and operates a piece of equipment which splatters over the band, there are provisions to penalise the amateur by fines and/or loss of licence. Thus, it is appropriate to have regulations and radio theory examined.

Now, what can happen to an amateur who uses Morse code poorly (slowly with lots of errors)? Are there licence implications? Can the licencee be fined or have the licence revoked? If the answer is no, then there was no point in examining the person in the first place.

A licence exam is used to define what a person should know and be able to do and is the benchmark for determining if the licencee is a fit person to hold the licence. This does not mean that the person cannot or will not forget what was examined, but it does mean that the licencee cannot use the excuse of ignorance if a breach occurs.

If it isn't important enough to have a penalty for non-compliance, then it isn't important enough to examine in the first place.

Mark.

The following message was relayed from a PBBS.
The ham said something that GOD (a PBBS SYSOP) might not like,
look how fast he ate his words"

Date: Wed, 11 Sep 96 09:41:00 UTC
From: N8VZL@WA8OMR.#NWV.WV.USA.NOAM
To: SYSOP@USBBS
Subject: No harm meant to sysops
Path: K1UGM!WG1I!KA0WIN!KE0WO!VE4KV!KA6EYH!WB8BII!WA8WNI ...

In my recent reply to K1OIK's blasting to AA0NN's deleting his messages,
no ill was intended to "ALL" sysops in general as one such sysop took
it. I did not mean for the reply to GOD@ALLUS and sysop's control to
demean sysops at all. quite the contrary, I simply meant that any sysop
has control of his property. The key word is property, and some users
do not like the fact to hear "It's my football es we'll play by my rules
or..." You am not a packet bbs sysop.

I am a LLBBS sysop and the rules are different. You play by my rules on
my bbs not necessarily the FCC's rules, but still some FCC rules do
apply. I still do not allow foul language on my LLBBS, although many
invite it. You get locked out of my bbs for such actions and no
warnings, but it is hard to lock out hams on the packet network hams are
not being locked out if their messages are deleted for foul content.
Locked out means the inability to get "IN" in the first place. I in
fact applaud sysops in the amateur packet network.

So if I indeed did insult someone while comparing two individuals for their
appraisals of one another, I am sorry you misinterpreted my quote,
it was not my intention to insult sysops.

> carl@ais.net

Hi Carl,

Thanks for clearing that up.

I do believe the majority of hams answering the ARRL survey will come out in favor of keeping the morse requirement. Not because we are against new and better modes, but because so many hams like to use it. I personally thought the survey was loaded toward reducing or eliminating the morse test requirement.

As one who works day to day with the latest in telecommunications technology, I can say with confidence that in a very short time, using ADSL technology, voice, video and 1.44 megabit data will be available to everyone via their regular copper phone line for a paltry few bucks. We are field testing it now. High speed digital communications will become so easy and cheap in the next few years, even the most advanced SS HF radio amateur modes will be obsolete by comparison of cost/performance. Mankind is ready to once again "jump the curve."

Will ham radio still be fun? Yes, as a window on an earlier time, an earlier technology, whether you enjoy morse, CLOVER, RTTY, SSB or some other mode.

73,

Jim - AD4VL

>
>Carl,
>
>Your prejudice toward older hams seems disgusting and mean spirited.

Jim,

I have stated clearly on many occasions that chronological age does not an "olde farte" make ... it's attitude and little else ...

I know and have known people (including hams) in their 70s and 80s whose intelligence and spirit of exploration, invention, and adventure are an inspiration ... I used to know a guy who was a land-line telegrapher when he was a kid ... he could copy lengthly bursts of code at 60-70wpm in his head without even thinking about it while simultaneously carrying on a conversation with me ... and that was after he'd had a few beers <grin>

I also know people in their 30s and 40s who are truly "olde fartz" ... they are stagnant, backward-looking, mean-spirited individuals whose attitudes towards life in general and anything new in particular deserve nothing but contempt ... because they are the "spoilers" who stand in the way of anything that remotely resembles progress either in ham radio, or in society in general.

I have a great deal of respect and admiration for the pioneers who went before us in the early days of ham radio ... I've read the history ... I have been a member of the Radio Club of America ...

I don't believe that the early pioneers of ham radio, who were inventors and experimenters first, would approve at all of the stagnating, anti-progress ideals espoused by the current "keep the code, and keep those damned no-coders off of 'our' bands" establishment sentiments.

>Stereotyping those of us who support continued code testing into a class
>that needs a "pacifier", and insinuating that we are incapable of
>understanding the "new stuff", is not likely to cause us to support a
>proposal that would throw us a crumb by giving us the lower 25KHz of the
>bands we currently have full advantage of.
>

You currently have SHARED access to the HF bands ... I suggested a 25kHz EXCLUSIVE sub-band, so that you'd ALWAYS have some space for CW without having to put up with newer digital modes that are not so pleasing to the ear ... even I don't like to LISTEN to the digital stuff. :-)

BTW, I'm 46 and have been licensed continuously since 1975, so I guess if age was all that mattered, there'd be some who would classify me as an "old-timer" ...

73,
Carl - wa6vse

Speaking for myself, if I hadn't been required to pass a 5 wpm, then 13
wpm Morse exam, I never would have known that I like Morse Code. FWIW.

> The reason for including a topic in a licence examination should not be > based on a person's, or group of people's personal inter=
ests. It should > be based on what the licencee is REQUIRED to do, or continue to know, > AFTER the exam has been passed.

I passed an exam that covered phone operating priveleges and digital
operating and theory. I am not REQUIRED to use these modes.

> To illustrate my point, if an amateur uses a transmitter outside of the > band, or builds and operates a piece of equipment which =

first place.

I recall questions about Q signals on the tests. There is no penalty if
I do not use them correctly. Yet I do not believe you are proposing that
those questions be deleted.

Perhaps better questions to ask and answer is: "Is Morse Code still
relevant to the Amateur Radio Service? If so, should we retain testing
as a requirement for some or all amateur priveleges. Should we keep it
as a requirement in its present form? Why, or why not."

It is my personal opinion that Morse Code is important to the Amateur Radio Service for a number of reasons. The most important is that it is apparently important to a significant number (significant is not necessarily defined as a majority) of us. The alternatives proposed are important to a significant number of us, too, so those who are proposing solutions that do not consider the needs or wishes of others with alternative views are proposing solutions that are more divisive than useful.

Let's take followups to .policy, where they are more appropriate to the charter of the group.

I need a bunch of vacuum tubes for a couple of radios that I am working on: a Collins KWM-2A and a Heathkit SB-110 6 Meter Rig. Some of the tubes that I need are as follows:

6U8A (Qty: 3)\
6EB8 \
6EA8 ---- These are "must haves"
6DC6 /
6AZ8 (Qty: 2)/

12AT7 (Qty: 2)
12AX7
6BN8 (Qty: 2)
6AZ8 (Qty: 2)
6146B (Qty: 5)
6CL6

If you have any of these tubes, let me know. I would prefer to purchase them all from one person, if possible, but I will purchase them from different places, if needed. If I could pick them up (local to Dallas/Ft. Worth, Texas, area), that would be a _HUGE_ plus. I will pay shipping costs.

Thank you in advance for your help.

Basil (Darin) Arrick, KB5KHR

K>Ham radio is so unappealing to the young:
K>
K>1. I offered 14 year old KA1VBQ $10 to make a single 2 meter contact,
K>she refused.
K>2. I offered N1XIY free GOOD 2M and HF gear, he is 16, he refused to
K>use it.
K>Electrolux and ham radio both have something in common, what?
K>
K>Burt

They're both objects that some teenagers are too lazy to use? or
They're both objects that some teenagers find too complicated? or
They're both objects that somebody through propaganda and brain washing
has convinced them are inappropriate to use? or
gee the possibilities are endless!

Burt, I actually enjoy many of your posts, but I make it a point to make
sure MY teenagers realize that you are NOT a proper example to follow
when they are reading these posts over my shoulder. I pray that you do
not provide such an example to your students. I honestly do not believe
that you are nearly as hateful as you portray yourself to be, BUT do you
realize the example you set? My son had the comment that since you are
a teacher there must be something to what you say. I agree that there
are problems with the ARS, but why not try to improve things? Are you
that much of a quitter? They had the right idea in the 70's: "If
you're not part of the solution, you are part of the problem".

Hmmm, middle age, white, sits and whines with very few actual ideas for
improvement, etc.......beginning to sound a lot like what somebody
(can't remember who) once called (insultingly) a "typical ham".

Hello,
I am N2NNU, Alex. I have been involved with high speed lans for
15 years now. I have seen de birth and the demize of at least
a dozen protocols and harware solution. And I have seen the standardisation
of perhaps the worst of them, the Ethernet. It all happen
just because of greed, non compliance and ego !

For us, the amateurs of the world to succede in this endeavor
we need to have the guts to reinvent our self. We need to
tell the legislators tha we need INCENTIVES to build the
next generation of HAMS. We need to grow the previousely
stated %2 of REAL Amateurs to as much possible. But
when they can-t use THEIR equipment to call in for a pizza
there in no much incentive to build new infrastructures
on top of the aging ALOHA.

We need the equivalent of the IBM to generate and build
universal standars and hardware and we need the equivalent
of Microsoft to help us be better users of the system.

It is a shame that we have left the entire market and hoby
to the whims of the foreign manufacturres. We need to
subsidise and create incentives for our hoby to grow and
thrive.

We need to do it now, before we are losing our precious
resoureces.

:
I think it is great you want to build your own cable. Why don't you write your own interface software also? There are two pieces to the puzzle, the cable and the software. RT Systems sells a package that has both. Just because you want to create one piece of it doesn't give you the right to steal the other part.

Here's an idea...learn to program...manufacture your own cable...set up a business then sell your new software and mass produced cable for $1! See how long you stay in business.
:
: you think pirated software makes prices go higher?
: your WRONG
:
Re-read, my friend. I never said any such thing. I said you can't expect the same high level of support with no hassles if a company has to wonder whether or not you paid the price. I spent less than 4 minutes on the phone fixing my problem. Never once asked for a registration number or asked to hold while it was confirmed. The guy who answered the phone fixed my problem and I was on my way.
:
: Software companies are riping us off charging us $100 for crapy
: software.. its all business
:
I only paid $40 for my ADMS-1C software and in my opinion that was a fair price.
:
: anyways, 5 minuets wasted explainging
:
Sorry, I don't think you could learn to program, because you obviously never learned to spell. I guess I wasted my time as well.

: Learning CW was how I earned my ticket in 1980 and how I communicated on
: HF for 10 years. If the FCC had recertification tests every 3 years for
: radio amateurs, I'd still pass it at 13 WPM, no problem. As a matter of
: fact, I think CLASS recertifications are a great idea!! Test theory and
: code and perhaps introduce some new updated theory at the same time. What
: better way to keep a pool of skilled technical talent current on the
: latest technology, regulations and theory?

You make a good point, about introducing new theory in recertification exams. Perhaps retesting every five years. With the question pool changing every four years, require that the recertification exam be taken within one year of the date that the appropriate question pool changes.

I'm going to take the written exam for Extra on Saturday. Yes, I read the ARRL book from cover to cover, and have done several closed-book practice exams, including three exams that covered all 400+ questions in the pool. Still, the Extra exam is too easy. Two of the four answers are utterly ridiculous, if one has read and understood the material in the book, and there aren't that many questions where it's difficult to choose the better of the remaining answers to a given question. We definitely need a more difficult exam at the top end, if obtaining an Extra class license is to continue to be an accomplishment.

Excellent! I enjoyed your post very much.

Why did we change from the Able, baker, charlie, etc. to
Alpha, bravo, charlie, etc.

The changes seemed rather arbitrary. On the average we added syllables:

Fox to foxtrot
Nan to November
Queen to Quebec,

but not in all cases:

George to Golf
Mike remained Mike.

What was the reason for changing?

regards,

earle

Lindsay, WA4ISZ asks, regarding my post that:

Bill is absolutely correct that mnemonic devices are an impediment to
developing true proficiency. However, tapes, too, should be avoided, as
should slow code. Yes, no one should even think about learning code
at 5 wpm if they EVER want full HF privileges.

For details see the article at URL:

http://hawk.nmt.edu/bateman/sara/finley.morse.html

Dave,

I presume that by "slow code" and "5 wpm" you mean 5 wpm at a CHARACTER
speed of 5 wpm. I see nothing wrong with learning 5 wpm code if the
character speed is, say, 13 wpm.

NO, I don't mean a 5 wpm character speed. I mean overall sending speed
of 5 wpm. Characters should be learned at no less than 18 wpm and
code should be learned at an overall speed of no less than 15 wpm.
What is wrong with learning 5 wpm code is that is condemns the student
to a long, unnecessarily frustrating and painful experience in trying
to get above 10 wpm later. Read the above-referenced article.

Why not? There should be an alternate means to keep the internet going without phone lines. The Internet is the only public place where there is no censorship and the world needs such a place. Maybe HAM radio is not the place for it but surely the HAM community can devise a system for it. The cable companies are already talking about putting it on cable but I would like to see a non-commercial place for it. The cellular phone industry with their network of repeaters is also talking about making it available so why not HAM radio?

Have often been curious how our AC power line grid works in USA. I think
it use to be something like 2000 volts or 2200 volts ac were routed on 2
hi tension wires to all the poles in an area, then poll transformers were
placed every so many homes apart to transform the 2200 volts down to
240 VAC with a center tapped secondary. The center tap of course went
down the pole to earth/ground. Each home then had 2 115 vac lines
coming to the house and a common (which was from the center tap on the
pole transformer and grounded. Is that the same way today? I once
knew a guy who used those pole transformers for his HV power supply for
hie 1kw 160 neter rig in Kokomo, Indiana. He ran the 120VAC into the
secondary and came out with about 2200 VAC on the primary which he
rectified and filtered for his 1 KW rig. I think he used the same
pole transformers as modulation transformers. Why pole transformers
you ask? He worked for the Kokomo Power company and got em for free.
His power supply stretched all the way accross the room in a chicken
coop and has a 204A as his final amp. It was a huge bottle about
5 feet high and you had to stand on a kitchen chair to reach the plate
cap. One for the radio club hs wrapped a soldering cord around his
arm then drew an rf arc off the 204A and the arc stretched out to about
4 inches or so. What a demo that was. He hs those big mercury
rectifiers in his pwr supply and with key down and modulating the 1 kw
on 160 meters, those suckers flickered and blinked so that the whole
chicken coop lit up like something from the Frankenstein movie.
Gess we will never see hose days again (that was back in 1937).

Hi

I've been a SWL for four years and now I made the exam and I can
transmit: it's time to put an antenna on the roof of my building so I've
some questions which I would appreciate you answer me.
Is a 50 ohm coax cable ok for that? Would there be many losses of
signal considering the 250ft cable lenght? If afirmative what could I do
to correct it?
Is an antenna tuner needed considering that the antenna (dipole) is cut
to the desired frequency?

Thank you very much, Andre Brandao, CT2GGD

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z SEPTEMBER 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 18 SEPTEMBER AND FORECAST FOR 19 SEPTEMBER - 21 SEPTEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 17 Sep
Daily Proton Fluence >1 MeV: 1.6E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 5.4E+08 (high)
X-ray background: A1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Sep 20 Sep 21 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Sep: 69/3

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 17 Sep
Learmonth 15 3234 4232
Fredericksburg 22 8
Planetary 15 6

Observed Kp for 17 Sep: 3202 1212

2B. MAGNETIC FORECAST
Date Ap Conditions
19 Sep 13 Unsettled
20 Sep 15 Unsettled
21 Sep 16 Unsettled
COMMENT: Geomagnetic activity is expected to increase over the
next 7 days, with active to minor storm levels probable during
interval 23-26 Sepetember.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
18 Sep Normal Normal-fair Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
19 Sep Normal Normal Fair
20 Sep Normal Normal Fair
21 Sep Normal Fair Poor
COMMENT: HF conditions at high latitudes are expected to degrade
over the next 7 days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
18 Sep 1

Observed Australian Regional MUFs:
Darwin: 15-30% depressed for the period 0000-0500UT,
otherwise near predicted monthly values.
Townsville: 15% depressed for the period 0000-0300UT,
otherwise near predicted monthly values.
Sydney: 15% depressed early in UT day, then
near predicted monthly values
Hobart: 15% depressed for daylight hours,
otherwise near predicted monthly values.

Predicted Monthly T index for September: 9

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
19 Sep 5 near predicted monthly values
20 Sep 5 near predicted monthly values
21 Sep 5 near predicted monthly values

Hello Bob,
I have been running an MLA-2500 for several years now.(although I am not a heavy user) I would say that I am a LIGHT user of the HF bands and I don't run the amp except when I need it.
I have never had any problem with the MLA-2500.
It will give me 1500 watts out on all bands with 100 watts drive and that's with less than 100 mills of grid current.
The only problems that I have heard of with the MLA-2500 is that you need to be very careful and not exceed the 200 ma grid current rating.
The MLA-2500 uses a pair of EIMAC 8875's.
The tubes are quite expensive these days so I hope mine last forever. I would guess I have had mine for 10 years now and it still has full output. I haven't seen any change sense the first time I ran it.
73 and Gud DX

>Why is the primary focus on testing ALWAYS as a means to "limit access
>to the HF bands" ???

Because, unlike V/UHF which can accomdate millions of folks due to its short range characteristics, if one so much as sneezes on HF he could possibly be heard half-way around the world. That 3.75 MHz we've been awarded does have an upper boundry in regard to the number of ops that can be accomdated.

You'll argue that if everyone used the latest fad mode we would have room for an unlimited number of folks; but you refuse to face the reality that we're not all going to shift to your mode of choice. You're guilty of espousing that ("you *must* use my mode") which you've condemed ("why *must* I learn the code?")

One wonders why you're not chastising the SSB crowd for their wide-bandwidth mode - uses more than CW.

>We need more people, not less ... but yes, they should be qualified to
>safely operate radios without hurting themselves or others, and without
>causing harmful interference to other services ... that's all.

You say we need more people on HF but you don't even have HF privileges (do you even own an HF rcvr?). And RF safety is *not* enough. We're the only radio service privileged to build and modify radio equipment; much more knowledge of electronics is needed than you are proposing.

Mike, youe mastery of the rediculous is astounding ...

To assert that a 10 question multiple-choice exam would be a meaningful theory test capable of demonstrating that one had the necessary technical knowledge and competence to safely operate (let alone build) a wide variety of ham radio gear, including things like 1500W linears with HV power supplies, etc. and also to be able to recognize and prevent harmful interference is simply absurd!

But, then again, that shouldn't surprise anyone, 'cause you've consistently demonstrated that you excel in absurd.

>have to learn CW *or* that nasty old radio technology.
>

I HAVE BEEN saying that the technical tests need to be made more
comprehensive and meaningful ... I've said that over and over again ...
I DO NOT support an "appliance operator's license" ...

However, the purpose is not "to keep people out" (so the bands won't
"be too crowded") ... the purpose is to assure that people are
sufficiently competent in the *relevant* skill necessary for safe
and interference-free operation ... not to support a government-mandated
fraternity hazing ...

>Well, I can't believe adding Carl's good buddies to the bands will
>do much to improve ham radio, so how about hearing from someone who
>seriously proposes tougher technical testing for advanced privileges?
>

Watch it with the "Carl's *good buddies*" inuendo ... I am NOT in favor
of a CB-like ham radio ... but the code does not keep out the "10-4
good buddy" types, either ...

>I'd be glad to see lots more people on the air - lots more technically
>qualified people. And I think there are a batch of idiots already
>on HF who should be re-tested too.
>

I agree with you 100%+++ on that one ... I could support some sort of
scheme for retesting for license renewal ... I'd also like it if we
could find a way to rid ourselves of sociopaths who jam, shout
obscenities on the air, etc.

>Why the emphasis on limiting HF access, then ? Not to keep
>people out, but to serve as a carrot (incentive) to people to learn
>more about ham radio operation and ham radio technology. HF access is
>clearly such an incentive, otherwise there wouldn't be so many folks
>clamoring to be given a license.

Yes, but the only thing emphasized right now for HF access is code ...
to get totally unrelated priveleges, you have to demonstrate faster and
faster code speeds ... rediculous ...

Nick ... I think you missunderstood me ... I don't think we have very
different opinions at all ...

>right that the Code will go away. But what do you intend to use as a
>final hurdle. If you give away the Amateur Radio License then why
>should anyone respect it.
>

I respect my license ... and I earned it ... however, I did not think
the CW test was a valid "requirement" then, nor do I now ... I actually
would respect my license more, had the theory part of the test been the
least bit challenging ... the code part earned no respect ... it was
simply a pain in the ass and a waste of my time ...

>
>And somewhere I remember being told that "that which is not earned but
>given freely away has no value."
>
>Do not devalue our Ham License by giving it away, Please.
>

Nobody who is advocating the elimination of the CW testing requirement
is saying "give the license away to anyone" ... what we are saying is
that more meaningful technical tests should be given to EVERYONE ... and
that the CW requirement should be dropped because it is no longer seen
as relevant by huge numbers of current and prospective hams ...

Not a "free lunch" ... more like get your driver's license by taking a
driving test, rather than proving that you can saddle a horse ...

Please reconsider the issue with an open mind in light of the above ...

>power needed). Of course, the amount of information it can carry is
>quite limited.
>

Paul,

Even an unmodulated carrier cannot be detected at levels at which
properly coded digital signals can be quite effective at conveying
useful information ...

Properly coded signals can "combat" and "avoid" the noise by trading
bandwidth and redundancy for (post-detection) s/n ratio, whereas the
unmodulated (or OOK'd) carrier will still be received in a finite
bandwidth, so it will always have noise to contend with ... as you
reduce the bandwidth arbitrarily to lower the noise floor, the amount
of information you can convey is proportionately reduced ...

Otherwise, your observations on the general ineffectiveness of
CW transmissions appear to be quite correct ...

I've been a ham for over 16 years, I'm 31 years old and I enjoy CW. Sometimes I come home from work and think, it would be nice to have a CW ragchew session on 80, 40 or 30 tonight.

True, CW does have lower throughput, but like handwriting a letter to someone, it forces you to think about what you are going to say before putting it to the medium that you are conveying the message through.

Learning CW was how I earned my ticket in 1980 and how I communicated on HF for 10 years. If the FCC had recertification tests every 3 years for radio amateurs, I'd still pass it at 13 WPM, no problem. As a matter of fact, I think CLASS recertifications are a great idea!! Test theory and code and perhaps introduce some new updated theory at the same time. What better way to keep a pool of skilled technical talent current on the latest technology, regulations and theory?

If you cherish something bad enough, you'll do what it takes to keep it.

Working towards lowering the standards by which you must still retain those privileges does not improve the Amateur Radio Service, it has the opposite affect. CW serves a purpose which is to provide a challenge to those people who desire to earn the Amateur Radio License and the privileges that come with it. I don't know about you, but I enjoy a challenge.

it's actually a case where in the old days, a universal radio was used for
all radio services. today, we have designed for purpose radios for just about
every radio service..to the point of no user serviceable parts inside.

as such, amateur radio becomes more of a speciality market since radios that
are "ham OK" aren't OK for other radio services.

it's not possible to have another "hit" like the Collins KWM-2 since the governments
and military folks want features not wanted, needed by amateurs...

this could be a bad thing -- do you want to cull out a significant number
of amateurs that are currently in the body count? sure, it'd be good to know
exactly where we stand on population, but now's probably not the time
to do it.

brent, ever been out in the ocean in a small boat? i know there are people
that are 4x his age that couldn't make that trip..

and you're coming across as a "safety nazi"...don't do anything that isn't 100%
safe. leads to things like ladders that would permit a 200 pound man to change
the lights on a porch being too large to fit in the space between the porch and
the overhang.

you can't get a five gallon pail these days that isn't covered in warnings about
how a small kid could drown in one.

evidently, the kid's a pretty good sailor to make it. i'd suggest laying off a bit.
who knows? maybe he even has the judgement to know when not to go as well
(unlike a recent unfortunate event with a small kid and transportation..)

I just had a phone call today (9/17) from Washington State Rep. Brian Thomas who spoke with State Patrol Capt. Tim Ericsson (just guessing on spelling) regarding the State Patrol's proposal to regulate all radios in vehicles and requiring certification of all mobile radios by the state Patrol.

As a result of many letters received, the State Patrol is cancelling the Oct 9th hearing and will go back to the drawing board. The purpose of the rule was intended to be confined to mobile cellular telephone installations. They received a lot of feedback and realize that their proposal was wrong and needs to be thought through and redrafted in a more appropriate manner.

Anyone interested in helping me out by evaluating a demo copy a Logbook and Award tracking program ?

I have written a small program for Windows 95 and would like some help from anyone who will take the time to look at it and give me some ideas and thoughts for the program.

Please Email me and I will send you back a ZIP file with the program as an attachment. Please... only respond if you will truly take the time and evaluate it for me. There is a readme file in the ZIP that tells the story.

If you are interested, please Email me at:

iancamp@io.org OR iancamp@interlog.com

Thanks and 73...

Source record: 216700

I have a 4KW Coleman. It was purchased for emergency use.

Complaints:
1) VERY loud. Replacing the stock mufler with a larger one helped considerably but would not recomend running it at night if neighbors are close by.
2) voltage at light load is around 140V. Higher than I like.
3) Consumes more fuel than I expected. I have the model with the small fuel tank. Recommend the model with the larger one.

Complements:
1) Usually starts 3'rd or 4th pull after sitting in basement for 6 months at a time.
2) low oil consumption.

>little about Amateur Radio before giving them their ticket.
>Tim/KJ7AZ

so timmy, did you not use those books when you were studying up for the ol'
novice/tech/whatever license that was your first? you had to pass elements
2 and 3A somewhere along the way -- and NYT is the book that covers those
two elements.

you sound like those bowlers upset that the bowling game has changed from
wooden lanes and relatively homogeneous bowling balls to one with hard
synthetic alleys and balls with coverstocks designed to cut through the lane
oil and cores that have dynamic characteristics that are far from what one
might think is in there based on the static balance test the ball's required to pass.

yes, you can bowl with a black beauty and there are times when that's the
right ball, but most days the serious bowler benefits from the use of reactive
resin balls with cores that cause gyroscopic precession as the ball rolls down the
lane into pins coated with a golf-ball like plastic that make them more reactive
as well...on lanes that are virtually identical across the entire house.

get your ve ticket and start noticing the number of people that fail the exams...

Power is the BIG difference. 5w may tinkly your pinky,
100w will sear the skin off your hand if you touch the antenna.

I learned the hard way, though I thought I was safe. I was trying
to tune up a bigcatcher with an old deaf WWII field strength meter.
I had to put the meter within six inches of the whip to get it
to register (was sitting on a box to get above center loaded coil)

I reached up from below to turn adjust knob on meter while key stuck down
on 100w. Though the meter was six inches away, no direct contact, the
instant I touched the knob it seared a little round spot on my finger.
The allen screw holding on the plastic knob got me.

I decided at that point I was WAY to close.

You would probably see smoke from your flesh if you actually grabbed a
whip putting out 100w. God knows what would happen if it were 1500w.

3357. A ProComm Plus Script to Control the AEA MemoryMaster Keyer

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-19 00:00:00 UTC
From: "Don L. Miller" <dlmiller@fishnet.net>
Message-ID: <32420055.754F@fishnet.net>
Source record: 216358

I have written a ProComm Plus Aspect script which is designed to be used
with the AEA MemoryMaster Keyer. You can download it at:

http://www.fishnet.net/~dlmiller/mm3.html

The MM-3 is a dandy device for learning the morse code. You can hook
it up to your computer and take advantage of its built-in QSO simulator
to prepare for your next upgrade. Everything sent by it will appear on
your monitor.

If you have your paddle plugged in, you can even talk back to the MM-3
during a simulated QSO. It will learn your callsign, your name and even
your QTH. The ultimate diplomat, the MM-3 will assume that any
inability
to copy your morse code is due to QRM rather than a "bad fist"!

The MM-3 also has the capability to send you random practice code
groups.

System requirements are:

ProComm Plus (DOS or Windows)
The AEA MemoryMaster Keyer (also called the MorseMachine or MM-3)
A IBM-Compatible PC with a VGA Monitor
The Serial Port Cable described in the MM-3 Manual
A paddle (Optional -- If you want to "talk back" to your keyer)

Installation instructions are included.

The principles of the phonetic alphabet are
-high penetrance (the sound gets through in adverse
signal/noise ratio environments)
-high distinguishability (no letter is easy to confuse with another)
-compatability with speakers of various native languages
-limited number of syllables (one or two, occasionally three)
-resistance to clipping (loss of signal of first or occasionally
last phoneme)

Compare the old ABLE with the new ALPHA and you'll see why the changes.

I didn't say *everyone* who uses Q codes is a moron ... I said that
"The Q signals are perfectly suited for conveying the limited number of
concepts consistent with moronic intelligence levels" and that "I'd
prefer to have a bit more flexibility to carry on an intelligent
conversation myself."

IOW, the mumber of ideas that can be conveyed with the Q signals is VERY
limited.

One obvious reason was to reduce the number of Universal Standard
Phonetic Alphabets.

Alpha Bravo does seem rather well designed. In general, words with
similar vowels in the stressed syllables (a/o or i/e) have differing
numbers of syllables or clearly different vowels elsewhere. The
distinction between the hard vowels (a, o) is dialect-dependent, as is
shown by the frequent thread that asserts that some people pronounce
'caught' and 'marry' identically[1].

For example, bearing in mind that the phonetic alphabet is international
and used by people with varying degrees of competence in English and
varying national inflections, and that radio communications are subject
to all sorts of fuzz, 'bravo' and 'charlie' seem farther apart to me
than 'baker' and 'charlie' because of the final vowel.

[1] Something like that, anyway.

Have used both, buy the Honda. My friend works at a alternator/generator rebuilding company (independent company serviceing many diffrent types) and told me he sees many of the Coleman units in for repair. I don't know if that means there are just more of them out there or if they break quicker than the Hondas...

Gruess Gott!

Only three months left in 1996 and I need many more OEM QSOs - in all Bundeslaender. Any mode - SSB, Tor, RTTY, CW - any time - any band. Best band is probably 20m and best time looks like 1600 UTC +/- 2 hours, but I'll try whatever band, time and mode you are QRV on. I've got power and a big antenna, so don't worry if you only have 100 watts and a dipole - we can make a QSO! Please help me with a sched.

Proceed as follows:

1. Get roll of duct tape.
2. Get Radio Shack hand-held scanner.
3. Tape scanner to HTX-202.

But seriously, from the thousands of posts seen in the past, there seems
to be no mods for the HTX-202.

3374. Digest of Articles - QST Jul 96 (Long - 26k)

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-19 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <51r9lc$52t@news1.infinet.com>
Source record: 216517
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the July, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub3/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
SEND INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:The Radio Sky - Part 2
Author>Emerson, Darrel - AA7FV, G3SYS
Source>QST Jul 96, pp. 28-31
Abstract>Quantitative information regarding the radio noise from the sky, including the distribution of sources, magnitudes of antenna temperatures, effects of frequency and other variables.

Digest>In the first part of this two-part series, the author described the fundamentals of radio astronomy and the radio noise that impinges on the earth from cosmic sources. In this part, he describes quantitatively the noise levels that will be received by a modest-size beam antenna aimed in the different azimuths and elevations at different times and at different frequencies.

There are two predominant sources of celestial noise: the sun and the Milky Way. The sun is the stronger, not because it is an especially noisy star, as stars go, but rather because it is so close. The Milky

Way is prominent because its noise represents the integrated total of many millions of stars. All other celestial sources, though they may be intrinsically "loud", are so far away that they are not significant factors in the signal-to-noise ratio of radio communications.

The article explains how to convert between sky-coordinate systems and how to find one's way across the sky. A series of plots show the distribution of noise across the sky at two-hour intervals over a 24-hour day, not including the effects of the sun which apparently "moves through" the sky during the course of each year.

The intensity of celestial noise decreases rapidly with increasing frequency. An antenna pointing in such direction to find a sky temperature of 100,000 degrees Kelvin at 100-MHz. would likely find less than 200-degrees at 1.0-GHz. In fact, at frequencies above 400-MHz., radiation from the ground is much noisier than that from the sky. For practical antennas, even when they are aimed at a high elevation angle, the greatest received noise may be received on side lobes collecting ground radiation. As the author comments, it is very likely that, for practical weak-signal work, locally-generated noise is still likely to be the most difficult problem.

Title>TA2:An Improved Multiband Trap Dipole Antenna
Author>Buxton, Al - W8NX
Source>QST Jul 96, pp. 32-34
Abstract>Construction details of a non-resonant trap antenna for four bands.

Digest>Classic multi-band trap dipoles have used resonant traps that act like insulators at their resonant frequencies and prevent antenna current from flowing in the wire located beyond the traps. For example, an 80- and 40-meter dipole would use a wire cut to resonance at 40-meters; at each end would be a trap resonant at 40-meters. On the other side of each trap would be additional wire to resonate the total length at 80-meters. On the latter band, the trap would no longer be resonant, but would add inductive reactance to the antenna. Because of the extra inductance, the added wire would have to be cut somewhat shorter to resonate on 80-meters than would be the case if the trap were not present.

That type of antenna is very effective and useful, but the resonant trap develops a high circulating current that causes two effects: first, it causes significant power loss and heat generation in the trap, itself. Second, high voltages are developed in the trap, which limit the amount of power that can be handled by the antenna without voltage breakdown.

W8NX has developed a 4-band trap dipole that avoids the problems of resonant traps; his traps do not resonate at any of the operating frequencies. Using W7EL's EZNEC computer program, the author worked out the parameters of a dipole usable on 80-, 40-, 17-, and 10-meters. Starting from the center feedpoint, each half of the antenna has

24.4-feet (7.44-m.) of wire to the trap, and 17.4-feet (5.30-m.) of additional wire beyond the trap. The parameters of the trap are inductance: 12.4-MHy. in parallel with 76.8-pF. of capacitance.

The author's traps are built using coax cable as both the inductance and the capacitance. Each is made of a bifilar winding of RG-59 (Belden 8241) coaxial cable wound on a length of 3.0-inch (76-mm.) ID, Schedule 40 PVC pipe, 5.33-inches (143-mm.) long.

The bifilar design of the traps reduces the resistance of the windings, thereby improving the Q-Factor and also provides more current-carrying capacity. The antenna has been tested, and performs well, handling full legal power.

The article contains a graph showing the SWR curve on all four bands. It indicates that the antenna displays an SWR below about 3 over the entire 40-meter band and 17-meter bands, and from 28- to 29-MHz. on the 10-meter band. On 80-meters, the operating bandwidth is much narrower, extending from about 3.73- to 3.85-MHz. Power loss in the traps is negligible on 40-, 17-, and 10-meters. It is about 1.66-dB. on 80-meters, which represents power dissipation of 120-watts when full legal power (1.5-KW PEP) is being radiated.

Title>TA3:A Comparison of HF Digital Protocols
Author>Riley, Tim; Bodson, Dennis - W4PWF; Rieman, Stephen; and Sparkman, Teresa G.
Source>QST Jul 96, pp. 35-39
Abstract>Results of a test of various digital protocols operating under adverse noise conditions. Performance, ranked in order of declining throughput rate: PACTOR II, G-TOR, CLOVER, PACTOR, AMTOR.

Digest>The Federal Government agencies responsible for communications during national emergencies conducted a study of the digital protocols used by hams. The test method used was to make a laboratory setup simulating communication between two stations under conditions of varying signal-to-noise ratios, selective fading, and multi-path delays. The protocols tested were: AMTOR, PACTOR, G-TOR, CLOVER, AND PACTOR II.

In making the tests, HF modems made by Kantronics, HAL Communications, AEA, and SCS were used, and data were reported separately from each. However, since the object of the test was to evaluate the protocol, not the modems, the manufacturers' identities were not divulged.

For reference purposes, all protocols were first tested under clear channel conditions, i.e. without any noise, fading, or path delays introduced. Then, they were tested under simulated good and poor ionospheric conditions with signal-to-noise ratios ranging from 0 to 20 (0 to 40 for Clover). Good ionospheric conditions were defined as fading frequency spread of 0.1-Hz., or less, and multipath delay of 0.5-milliseconds, maximum. Poor conditions were simulated with 1.0-Hz. frequency spread and multipath delay of as much as 2.0-ms.

Clear channel data throughputs were approximately as follows:

Protocol Characters per
Second

AMTOR 6
PACTOR 25
G-TOR 45
CLOVER 45 to 70
PACTOR II 130

Results under simulated propagation conditions were as follows:

Signal-to-Noise Low S/N High S/N Low S/N High S/N
Ionosphere Condx Poor Good Good Poor
(cps) (cps) (cps) (cps)

AMTOR 4 6 4.5 5.5
PACTOR 4 25 5 20
G-TOR 10 40 17 13
CLOVER 4 40 12 12
PACTOR II 8 80 8 60

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V
Asst. Technical Editor

Title>AEA DSP-232 Multimode Data Controller
Author>Ford, Steve - WB8IMY
Source>QST Jul 96, pp. 59-61
Abstract>Review of the latest DSP TNC by AEA. Performance was rated from excellent to outstanding. Provides packet, RTTY, AMTOR, and PACTOR, not CLOVER, G-TOR, nor PACTOR II.

Digest>The AEA DSP-232 is the latest multimode data controller offered by AEA. It utilizes digital signal processing (DSP) to do practically all of the coding, decoding, filtering, and other processing necessary to handle digital protocols in amateur radio. This does not mean, however, that it handles all of the protocols now in use. It provides only packet, RTTY, AMTOR and PACTOR. The manufacturer states that, in early 1997, they will modify the unit to add 1200-baud BPSK packet and 400-baud BPSK telemetry.

The DSP-232 does not handle the CLOVER, G-TOR, nor PACTOR II protocols. All three of those modes are proprietary; offering them would require the manufacturer to pay a royalty to the copyright owner. AEA has hinted that they may make PACTOR II available in the future, but the possibility of adding CLOVER or G-TOR seems remote.

In operation, the reviewer found it easy to tune in desired signals by watching the front-panel LED indicator. Performance in RTTY, AMTOR, and especially in PACTOR modes, was excellent to outstanding. The

extra-sharp filters that are provided by the DSP pay dividends in the form of superior data throughput in the face of close-in QRM, high noise levels, and fading.

In packet, the reviewer did not notice much advantage over older, analog models because of the good signal strength and low noise of VHF FM. But he did note that the DSP-232 has a built-in automatic packet reporting system (APRS), ready to go with the addition of a GPS receiver.

Title>PR2:JPS NIR-12 Noise and Interference Reducer
Author>Pocock, Emil - W3EP
Source>QST Jul 96, pp. 61-63
Abstract>Review of a new outboard DSP unit by JPS. Provides more functions and superior performance.

Digest>In the 5-years, or more, since W9GR first introduced digital signal processing (DSP) to the amateur community, significant changes have occurred. The original units seemed like magic at the time, but were quite limited in flexibility. Filter parameters were fixed in software so that several discrete filters, each with a certain center frequency and bandwidth, were selectable by switch. One could have dynamic noise reduction or narrow-band filters, but not both at the same time. Furthermore, the dynamic range was very limited and early models did not contain audio AGC, so one had to readjust receiver audio gain based on the signal level being received.
